GCHQ Intercept Office in Afghanistan [allegedly]

ISSUE 121 November 2020

http://www.enigma2000.org.uk

Editorial

Short Wave reception carries on much as it has for the memorable past; weak signals, QRN, QRM and QSB. Frequency change other than those scheduled across most of the stations copied seems to have slowed down a little too with the E07 exception.

With all the trials and tribulations [not all radio as we are all aware] it was heartening to read this below from GCHQ. Probably not her real name and if you met her she'd tell you she worked in Starbucks of somewhere; go on Alisha.....

Well, its all a secret world but then there's the transparency:

One year ago Yahoo were seen to be making untenable changes as we mentioned in the newsletter of that time; we assured our members that we were looking for a solution and with Brian's invaluable help we used Gaggle for the group home.

With the passage of time we have seen how decent Gaggle is; there's a small cost which PLdn pays, it would be pointless to try and levy any cost from our members but its interesting to see exactly how many persons bother to make a contribution – and many thanks to the regulars that have. April Fool jokes excepted anything of interest or use is ok so come on non-contributors please send logs occasionally.

Again thanks to Brian for his skills and for overseeing the steady running of this group.

NASA has stated that we are about to enter a new sun spot cycle which is good. Some other scientific body has stated it won't be what we expect because there will be even less sunspot activity suggesting we will remain at an all time low for sometime.

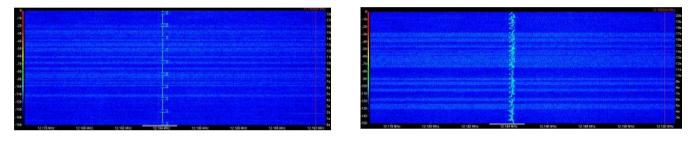

PLdn was troubled with antenna problems; using a 40M quarter wave terminated with a 9:1 Unun the performance has usually been very adequate from 80 to 6m. Recently coverage of the polytones has been marred with weak and some very unacceptable signal strengths. Comparison with those received on his inverted L showed such a difference a check and repair programme was run. Using stored information such as SWR, loss and resistance readings it became obvious the problem was in the matching box containing the Unun. Indeed it was and upon opening it was seen the actual joint where the element connects to the unun had failed; doubtless due to the constant waving about due to the gusts we have here being 73.4M above sea level. That fixed results are now back to those expected.

The weak signals still remain of course; stations are following schedules with a few changes. The exception is the occasional receptions here of 2100/2200z HM01 suggesting changes in propagation.

This newsletter will be the last before Christmas 2020 and the owners and moderators wish our members and contributors compliments of the Season as we look forward to an eventual change in the fortunes of mankind.

Interference.

One of the subjects of discussion in the continuing and rising QRM we suffer. Crap switch-mode PSUs, poor motor suppression, microprocessor controlled cheapies, badly distributed broadband over unmatched copper pairs all take their toll on SW reception. Peter wrote the following and which adequately matches my own experiences.....

The horizontal light lines are caused by the type of QRM that PoSW remarks on. With a weak signal this QRM will dominate the received station

"Interference to short-wave reception continues to increase, one strange manifestation which appeared about six weeks ago takes the form of what I can only describe as a great "splurge" of a wobbly, AC modulated carrier which pops up roughly every 670 – 680 kHz across the band so presumably from a switch mode power supply or the video circuitry of a security camera system, perhaps, as it is there round the clock.

The lowest frequency on which it has been found is in the region of 2365 kHz and there is one spike around 3706 in the 80 metre band and one inside 40 metres.

Fortunately the wide-band local interference which wiped out the HF end of the medium wave band and short wave up to about 3 MHz which had been around for several years but which vanished suddenly just under a year ago has not returned.

I think a lot of interference comes from internet traffic over the phone lines which around here are on poles above ground.

However, there are signs all over the district warning of forthcoming road closures in connection with the installation of "ultra fast broad-band" and green coloured cabinets are appearing at roadsides. I saw at one place the other day where work has already begun they were rolling out a large drum of fibre optic cable and digging a trench to put it underground which on the face of it would eliminate radiated interference but if the final connection into the customer's property is still going to be copper wire then the interference will still be there.

The trace here is taken from the AGC voltage of my FT897 7 axis is around 4mins; the strength indicated is between S7 [lowest point] rest S8

You'd think the powers that be would ensure the many regulations to prevent this sort of QRM would actually do something. With big business attached and lots of lovely money rolling in you're quite mistaken [but they'll turn out to prevent an old couples TV affecting distribution of this interfereing broadband]

Book Review

In the last Newsletter [En120] we covered in some length the release of Trevor Barnes' book, 'Dead Doubles.' It is a story that those of us of a certain age will remember; for myself we had just returned from Aden and the Sudan as this storyline appeared in the press along with another, perhaps attenuating, storyline of the discovery of a spy radio in Wales. The headlines were attention grabbing as one might expect and the coverage, at the time, quite in depth.

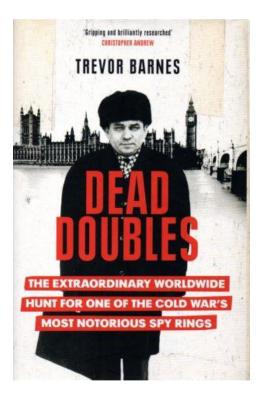

There followed a number of books covering the subject, The Great Spy Ring by Norman Lucas, Spy Ring by Bulloch and Miller followed by two personal 'accounts' and heavily written in favour of the authors: Spy: Memoirs of Gordon Lonsdale and Operation Portland by Harry Houghton. Another publication that touched briefly on the subject was 'The Crime Museum Uncovered, Inside Scotland Yard's Special Collection by Jackie Keily and Julia Hoffbrand. The book accompanied the Museum of London exposé of items held in the Metropolitan Police 'Black Museum' which in the now demolished building at St James' was held in the rather aptly numbered Rm101. In a chapter entitled Espionage & the Cold War certain items pertaining to known spies were briefly covered.

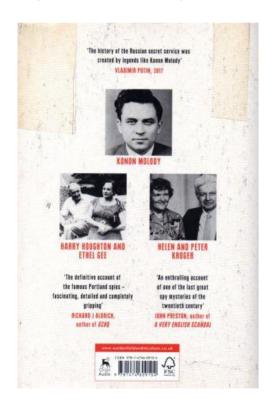

©PBeaumont 2020

Kroger's transmitter/receiver

The opening images were pages from the One Time Pads used by Messrs Kroger and Lonsdale but incorrectly stated as Codes used by the Portland Spy Ring. Turning the page were other concealment items found in the homes of Messrs Kroger and Lonsdale but not a lot of explanation; pity, because the imagery was quite good. There were other items in the Black Museum that could have been included but might actually be seen as 'sensitive' even today.

Dead Doubles was released 3rd September, 2020. Eagerly awaited it arrived on time and I set about reading it straight away. No nonsense introduction; the book started with more than adequate information to lead the reader through the book with reference at their fingertips; Maps, Abbreviations, Who's Who and Codenames. A Note on the KGB, MI5: Who's Who in the Portland spy case and finally a Prologue.

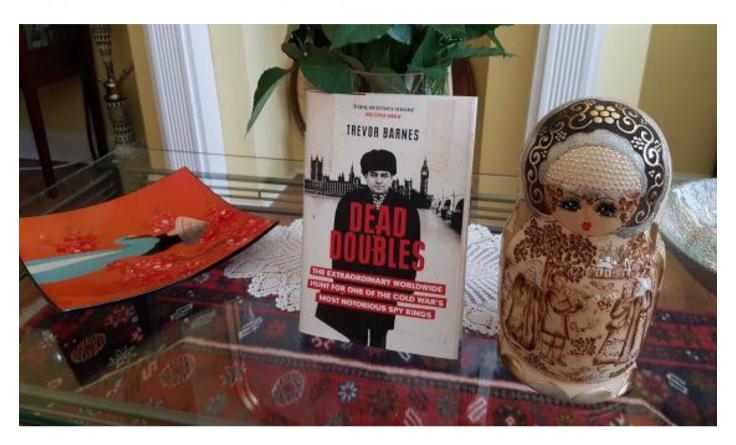

No rambling introduction here – like the rest of the content, hard and well-researched facts and a more than adequate intro into the evidence gathering in limited time.

Far from the code names suggested in the Mitrokhin Archive Trevor Barnes informs the reader of four code-names: Reverberate, Last Act, Killjoys and Sniper itemising, if you like, their parts in the unfolding actions surrounding perhaps the most damaging spy ring in 50's and 60's Britain. There's plenty of imagery too. Not just space fillers but very relevant to the book. Although the detail here is more than adequate the book continues its very decent coverage from start to finish; the reader becomes part of the investigation as a discrete observer.

Other books I have read on this subject just seem to brush over certain aspects of the occurrence; not so Dead Doubles. The detail is excellent and that includes technical matters. Even Peter Wright's RAFTER technique he claims to have developed gets a mention. [It's worth noting that radio engineers have used a second receiver to prove certain stages are operating in a non-working radio for years – certainly before Peter Wright wrote his book].

I even had the RAFTER technique used on me in 1974 by a certain gentleman who lived in the same new builds as I did. We met at Norwood Junction Station one morning on our way to work and he mentioned he heard me listening to the RSGB Newscast on 80m- 3660kHz?- and he said that the freq was 455kHz higher as he's monitored the Local Oscillator plus RF freq output.

He was employed in the Foreign Office he said and prior to being desk bound was a radio operator on deep sea fishing trawlers around the Barent Sea areas. He was a member of the Royal Naval ARS and his Morse skills matched that of G3LKO [DoK] including Russian barred/accented characters. DoK was an exintercept operator and the conversations between them were quite something to be involved with.

Anyway, the content of Dead Doubles will more than satisfy the needs of anyone with an interest in the wireless use of the Portland Spy Ring. As I read I made notes per page on content:

notes per page on content:

- guided missile [Josef Frolik covers this in his memoirs]

P51 Flash Transmissions [Burst or very fast Morse, machine sent].

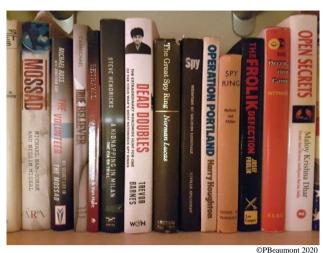

Unmasking electronics engineer as Czech secret service agent

P58 RAFTER

P33

- P59 OTP and decrypts of 'number' messages
- P76 Content of Lonsdale's radio traffic/flash messages
- P85 Message schedule Krogers
- P89 Time of Lonsdale's message and intercept 0730 Saturday 7th January, 1961
- P121 Lonsdale's signal plans, radio make and antenna. [Stated lengthy antenna JoK and I entered Lonsdale's abode and could not be >10M due to compact size].
- P122 Kroger's OTP and transmission schedules [1st/3rd Saturdays April 1960 to January 1961].
- P123 Kroger's transmitter/receiver flash equipment keyer etc.
- P124 Use of RAFTER by GCHQ
- P128 GCHQ decrypting Lonsdale's msgs.
- P137 Kroger's radio signal plan as evidence to start of espionage activities.
- P139 Description of Kroger's transmitter/receiver.
- P140 Signal Pads/Call Signs(!) Lonsdale
 GCHQ ops confirming msgs sent in Morse as set out in Kroger's signal plans use of RDF technique.

- P165 GCHQ examination of Kroger's wireless equipment, Cipher Pads and signal plans along with Lonsdale's.
- P167 Detection of Kroger's transmissions and why difficult.
- P254 Instruction from Moscow via radio to spies.
- P269 Attempts to intercept radio signals.

A small section of PLdn's several bookshelves

As one can see there's more than enough for the followers of the niche subject of spy messages; there's more than enough for the lay man but especially for the student of Intelligence matters.

There are 316 pages including reference; anyone finding a particular interest can easily expand on the subject but what is obvious is that Trevor Barnes has not only used the latest material to be released by the Crown but has also done the same elsewhere, including Russia.

It's an excellent book that should grace bookshelves of those with and interest everywhere which is why there's a gap before 'Operation Portland' because I'm reading Trevor Barnes' book again. It's excellent.

Well worth visiting the website on this one if only for the pictures!:

A Russian Spy's Manual: Send a Secret Message to the Strela-3 Satellite and Betray NATO Allies

Mirek TódaMIREK TÓDA

https://dennikn.sk/2082755/russian-spys-manual-send-a-secret-message-to-the-strela-3-satellite-and-betray-nato-allies/

A "dead box" in the Viennese woods, secret meetings around Europe, and a support network of GRU agents: the case of the Austrian spy Martin Möller shows how the world of Russian espionage works.

Martin Möller once again checked the three-digit code. That code would allow him to access the satellite where he was to send his encrypted message.

All of this was just as his Russian Military Intelligence (GRU) commander, Yuri, had taught him. Möller had been thoroughly trained to connect with Russian Strela-3 military satellites as they flew over Central Europe.

He could send a message either from Austria – where he worked as a colonel in the Austrian army – or from Slovakia where he felt comfortable interacting with Russian spies; he preferred to meet them in Bratislava or at Štrbské pleso in the High Tatras.

And properly financially compensated for.

As a colonel of a friendly army, he participated in several NATO events. In this case, thanks to an invitation from the Allies, he was able to obtain detailed information on how the North Atlantic Alliance was trying to protect itself from attacks with IEDs (Improvised Explosive Devices) – which are one of the Taliban's most commonly-used weapons against Allied troops in Afghanistan.

When Möller checked the three-digit code again, he connected with the Russian military satellite Strela-3 to which he sent his secret message and thus directly exposed NATO troops in the field.

It is estimated that in three decades of espionage – dating back to Tehran in the late 1980s – Möller earned at least $\in 810,000$, or around $\in 27,000$ each year. Behind closed doors in an Austrian court, he received a surprisingly light sentence in the beginning of the summer: three years. But the 71-year-old Austrian was released immediately, due in large part to the year and a half he had spent in pre-trial detention.

After a long investigation, Denník N has concluded that Austrian Colonel Martin Möller was a highly regarded agent of the Russian military secret service (GRU) until his discovery in the Fall of 2018, despite his retirement five years earlier.

He was an important asset of the GRU because of his frequent encounters with Russian spies, the training he had completed, and the techniques that were at his disposal. Möller had also met personally with noteworthy Russian agents during the course of his spy career.

Some of these agents were members of the well-known GRU 29155 unit, which specialized in assassinations or sabotage efforts to destabilize European countries. Among other things, the unit was behind the poisoning of Sergei Skripal and his daughter in Salisbury, England, as well as the attempted coup in Montenegro.

If all of this was open-sourced information – as Möller's defence claimed during the trial in Salzburg – why would the GRU have paid so much attention to him for so long?

Thanks to several sources who had access to the trial in Salzburg or who knew Möller personally, Denník N was able to lay out a detailed picture of how Russian spies collaborate throughout our region including where and with whom they meet, and how they pass on state secrets.

Janko Kráľ Park. One of the favorite places where Möller met his GRU commanding officers. Photo by Vladimír Šimíček/Denník

Slovakia played an important role for Martin Möller; the Russian spy often met with his commanding officers here. These meetings were most often held in Bratislava, to which he had easy access thanks to the opening of the borders within the Schengen states. One of his favourite meeting places was Janko Král' Park on the Petržalka side of the Danube River. Sometimes Möller had secret meetings with Russian handlers in the FIS and Panorama hotels in the Štrbské pleso resort area in the High Tatras.

How it started

Martin Möller had to wait for his initial meeting with his first commanding field officer; it took several years before he was recruited by a Russian spy.

It all started during his military mission in the Middle East in the late 1980s at the end of the Cold War. Martin Möller participated in the UN UNIIMOG mission, which was established during the Iran-Iraq war.

It was in Tehran where Möller met Russian agent Yuri Y. The agent was a blond, tall and slender man in his forties who held the position of Russian military attaché in Tehran.

Yuri Y. successfully recruited Möller under diplomatic cover in Iran. During his time on the mission, Yuri Y. taught Möller basic tricks for those occasions when secret writing would need to be used – employing European coins, a chewing gum or a ballpoint pen among other tools.

Möller began to provide Yuri Y. with initial pieces of information about the inner workings of the Austrian army.

But later, the key was really the address the agents used for their secret communications. It was a Cypriot address, directed to Andreas G. Archimedes, PO Box 24349, 1703 Nicosia.

The instructions were simple – he had to write the letter in English, and if he mentioned Johann's name, the addressee knew that there was a hidden secret message inside. It is very probable that thanks to this correspondence with special codes, Möller learned about the place and time of his first meeting in Bratislava.

For example, there was a postcard with a number line that in fact looked like a telephone number.

For Möller, the Cypriot address was an important communication channel with the GRU and was to be used primarily when other methods failed or when extraordinary events occurred. His first meeting with a colonel from the GRU in Austria took place in the spring of 1992.

During an hours-long conversation in Vienna, Möller was instructed to write political reports. If anyone found out, he would have to burn everything.

However, a much more interesting mission for Möller took place a year later in Bratislava and had been planned long in advance. The Austrian colonel arrived a few days earlier to get accustomed in the city.

Meeting place Number 2 and the code "SAM" meant that they would meet near the statue of Samuel Mikovíni on the Bratislava embankment, next to the place where River Park stands today, and opposite the new Zuckermandel building.

What took place was just like in a spy movie: "Yuri" took Möller to a conspiracy apartment in Bratislava and handed him the secret communications device. The Colonel realized that Slovakia would be an ideal place for such meetings.

His commanding officer could move freely around the Slovak capital, and the country had idyllic relations with Russia.

This changed after the new government of Igor Matovič took hold. Slovakia proceeded to expel three Russian spies who were in the country under diplomatic cover. Bratislava was angry that the Russian secret service had misused Slovak visas during an assassination in Berlin. However, this did not happen until many years later.

The Strela-3 satellites

Möller received training on how to send radio-communicated intelligence through the military satellites known as Strela-3. In order to connect with them, Möller was given a sophisticated satellite device with which he could send encrypted messages. He used it primarily to send sensitive classified information or to make arrangements with an intelligence officer.

This is an old technology used during the Cold War. The GRU used the Strela-3 satellite system during the assassination of Zelimkhan Yandarbyev in Doha in 2004, and the agency appears to still be using it today.

If there was something that could have betrayed Möller – apart from his suspicious encounters with agents from the GRU unit 29155 – it was his communication with the Russian military satellite Strela-3.

The Russian mole in the Austrian army had a list of times when the satellites would be directly over Austrian territory. Each satellite has a three-digit code such as 208, 210, 213, 214, 215, 216, 217 or 219. For example, code 210 meant that Möller merged with the COSMOS 2386 satellite, which the Russians launched into space in 2001 and which is registered under the NORAD satellite catalogue number 27059.

It is noteworthy that Möller also had access to these satellites during his retirement since it shows the importance that the GRU placed on him.

A "dead box" in the forest

One of the "dead boxes" Möller used was located in a Viennese forest on the outskirts of the Austrian capital, near the lookout tower. To get there, you had to take the S-Bahn train to its terminal station before changing to the bus and then taking that bus through to its last stop on the top of the hill. This method worked if Möller wanted to be sure that no one was following him. Whether he used public transportation or drove himself to the spot, he was able to see if anyone was tracking him.

Vienna Forest, where they exchanged messages in a "dead box". Photo by Vladimír Šimíček/Denník N

With the advent of the Internet, Möller also began using special software for data transmission.

Möller received an intelligence manual from the GRU which included techniques such as how to proceed when his cover is compromised, how to obtain secret information, or how to use encrypted communication. The Austrian secret service discovered this manual many years later despite Möller's attempts to erase it entirely from his computer.

As Martin Möller became a full-fledged Russian spy, he met his commanding officer in more and more places.

JAN, for example, meant a meeting at the statue of Janko Král' in an orchard on the Petržalka side of the Danube River in Bratislava. The meeting was to be held on the first Friday of every month precisely at 5 p. m., and the meeting was to be confirmed via radio. Each meeting was carefully prepared and arranged in Moscow months in advance. There were other codes. ZAG, for example, meant that a meeting was to take place at the city's Botanical Garden.

Apart from Bratislava, Möller met with Russian handlers in Budapest, Prague, Pula, Heviz, and Štrbské Pleso.

Initially, Möller reported to Yuri Y., but in 2000 Juri was replaced by a new commanding officer. The officer's name was Igor Zaytsev, born on April 6, 1954. Zaytsev would now provide oversight to the Austrian mole.

The appointment was an odd one. Zaytsev was from the fourth GRU department in charge of Africa. Earlier, he had worked in the office of the military attaché in Ankara. Because Möller was recruited in Iran, they made him an agent of the 4th Division instead of the 1st Division, which traditionally covers Europe.

Zaytsev took over oversight of Möller, gave him various assignments, and prepared him for a possible reveal, which in the end took place in the Fall of 2018.

What they were interested in

What type of information did the GRU try to obtain through Möller?

There was a wide range of topics. Möller provided officers with data on Austrian military units and their equipment, including details on radar stations and anti-aircraft systems. The GRU sent information about NATO projects or tactical movements of the German army. It included sensitive information on military technology and on military equipment such as armoured vehicles.

Because of his position as a colonel in the Austrian army, Möller also had access to secret information concerning both Austria and the North Atlantic Alliance.

The Colonel obtained information by taking pictures of army intranet screens using mini-cameras and recording devices. Through his espionage, he revealed secret information not only from the Austrian army but also from allied institutions such as the EDA (European Defense Agency) and NATO.

One of his findings was, for example, NATO countermeasures against IEDs in Afghanistan. This information was extremely important for the GRU.

As the New York Times uncovered this year, Russia's secret service paid financial rewards to Taliban terrorists as an incentive to attack Allied coalition forces. Understanding where NATO's weaknesses were could make the Taliban's attacks more powerful.

The information Möller provided could have likely helped Russian-backed terrorists prepare explosives to kill as efficiently as possible, especially given new measures taken at Allied headquarters. Möller's espionage in this case could have led to the deaths of soldiers from an organization that Austria officially considers a partner.

Despite his lawyers' arguments at trial, the information Möller passed on was not openly-sourced. As a recruited agent, Möller sent extremely sensitive information to the Russian GRU, which could have likely threatened the Slovak contingent in Afghanistan.

Austrian troops have access to various NATO training programs, exercises, or conferences in an effort to facilitate ongoing cooperation with Allied armed forces in the face of common threats.

Part of this process is, for example, the PARP – the planning and evaluation process – during which the status of NATO troops and the Austrian army's military capabilities are assessed on a biyearly basis.

It may sound like office work, but these are the moments during which Allied forces discuss things such as vulnerabilities or recurring attacks on its troops in Afghanistan. Between 2009 and 2013, Möller attended meetings on these very topics. Some of those meetings took place at NATO Headquarters in Brussels.

In 2011, Möller received information about chemical weapons that belonged to the Libyan army – a supply of mustard and sarin – which disappeared from army warehouses during the country's armed conflicts and which found itself in the hands of Islamic terrorist groups. Russia plays a major role in the Libyan civil war, where it supports General Haftar Khalifa, who has so far tried unsuccessfully to take control of Tripoli at the expense of a UN-backed government.

Möller became especially useful in his work with the Structural Planning Department at the Austrian Ministry of Defense between 2008 and 2013.

"The large amount of secret information about countermeasures against the IED revealed by Möller apparently led to the deaths of coalition forces during attacks perpetrated by the Taliban against NATO. Key information about NATO troops came to the Taliban from the Russians, who had it from their Austrian agent," one of the sources acquainted with the intelligence activities of the exposed colonel told Denník N.

GRU agent support network

Igor Zaytsev oversaw not only Möller, but also the entire intelligence network of Russian agents – that is, the GRU agents who operate in that region of Central Europe under diplomatic cover – who communicated with him or who were sent to collect "dead boxes".

These were the same agents that Slovakia expelled this year following the abuse of Slovak visas in the assassination of a Chechen activist in Berlin.

Members of the dreaded GRU 29155 unit even moved in the vicinity of Möller, which is one of the possible reasons why the Austrian counterintelligence, after 30 years, finally discovered the Russian spy among Austrian soldiers. The names that swirled around Möller were simply striking to Austrian counterintelligence officials after the Salisbury poisoning or the failed coup attempt in Montenegro.

The meetings with Möller were facilitated by "employees" or military attachés at the Russian embassies in Zagreb, Ljubljana and Budapest. For example, Igor Zaytsev was transported by these officials to his meetings with Möller and throughout Europe. They assisted him because he was an "illegal" – a spy who did not have proper diplomatic cover.

In September 2004, Martin Möller met Zaytsev in the Croatian port city of Pula. At the same time and in the same hotel on the Adriatic coast, the commander of unit 29155, Andrey Averyanov – who is one of the main suspects in the attempted assassination of Skripal – was also staying there. One of the "Russian tourists" from Salisbury, Anatoly Chepiga, was at his daughter's wedding, as Bellingcat reported.

The same trio - Möller, Zaytsev, and Averyanov - was also in the same hotel resort a year later.

In Slovakia, in October 2013, Möller met Zaytsev at the FIS Hotel in Štrbské Pleso. Everything was arranged by Eduard Shishmakov – another operative of unit 29155, who was convicted to 15 years in prison in Montenegro for attempting a coup there. Zaytsev and Shishmakov also stopped at the Abba Hotel in Bratislava, where they were visited by the local attaché Evgeny Karpukhov.

Shishmakov was expelled from Warsaw in 2014 for espionage where he had worked with diplomatic cover.

It is more than likely that the "military diplomats" who prepared Möller's meetings with his commanding officers were GRU agents.

When the Austrian secret service eventually found a Russian communications device near Möller, there was no doubt that they had come across a highly regarded Russian agent. Although the Austrian authorities did not approach him until several decades later, thanks to a thorough investigation, they were able to detect the espionage techniques that are still used by the GRU military secret service in Slovakia to this day.

Slovakia in the center of an espionage affair: a Russian spy and his agent from Vienna felt at home with us. One of the key witnesses in the espionage affair in Austria is a Slovak woman with Austrian citizenship. She feels threatened.

At the Panorama Hotel at Štrbské pleso, you could not miss the couple. They had been drinking together for three nights. The staff regularly took several bottles of vodka out of their room.

One of the two men was Austrian, the other was Russian. At first glance, they may have looked like old friends, perhaps businessmen who came here in May 2003 to rest and enjoy the Slovak mountains.

Before leaving the hotel for Vienna, the Austrian was seen digging into a package of banknotes of the highest value.

Two agents in the High Tatras

Employees of the well-known hotel in the High Tatras could not have guessed that it was in fact a pair of spies. One of them was the Austrian Colonel Martin Möller, who had been disclosing secret information from the army to the Russians since the late 1980s, and continued to do so for the next few years.

The man for whom the Austrian colonel traveled from Vienna to the Tatras was his Russian liaison and commanding officer – Igor Egorovich Zaytsev, a 66-year-old military intelligence agent, for whom Austria issued an arrest warrant last year.

Igor Zaytsev – handler of Austrian agent from GRU. Foto – Austrian Ministry of the Interior Both are now known as the main characters in one of the largest espionage scandals in neighboring Austria.

It has never been written that Slovakia played a significant role in the case. Thanks to several sources that are familiar with the process, and one who knows the Austrian colonel personally, Denník N managed to partially put together the puzzle of the spy affair.

Many of Möller's contacts with his superior from the Russian GRU intelligence camp took place in Slovakia.

The case ended quite easily for Martin Möller. The trial took place behind closed doors in Salzburg, Austria, and was closed at the beginning of the summer in the shadow of the corona crisis with the sentencing of Möller to three years in prison. Details, including the full name of the Russian spy, were not disclosed by the Austrians.

Treason, which would usually end with a long sentence and a public debate on the impact of Russian espionage, ended in silence overshadowed by pandemic measures.

Despite the fact that Martin Möller had been spying for Russia for at least 25 years and made about 300,000 euros through it, he was released immediately after his conviction. The reason was probably that he had already served half his sentence in pre-trial detention, but also that, according to the judge, "he could no longer continue his espionage activity".

The 72-year-old Salzburger is already retired and the court apparently also took into account his poor health.

According to intelligence expert Siegfried Beer, the low sentence for Colonel Möller is probably related to the fact that his defense successfully convinced the court that the agent provided the Russians with publicly available information.

"The trial was taken very seriously by the army establishment and was well-prepared by Austrian military intelligence. They were going for maximum sentencing of 10 years in prison," said Beer, founder of the Austrian Center for Intelligence, Propaganda and Security Studies.

"However, the unofficial reason could be that the Austrians who run vigorous energy and other businesses with Russia are not very angry with Moscow," said Austrian analyst Gustav Gressel, who works at the European Council on Foreign Relations in Berlin and focuses on security issues.

The low punishment did not surprise him. "In Austria, whose capital became the center of espionage during the Cold War, espionage is rarely treated as a serious crime. Even more so when it is in favor of the Russian Federation and it could jeopardize business," adds Gressel.

Slovak ex-girlfriend

As Denník N found out, one of the key witnesses in the espionage affair is Martin Möller's ex-girlfriend, with whom the Austrian colonel had a close relationship.

This is a 78-year-old Slovak woman with Austrian citizenship, whose name we do not disclose due to her security concerns. "I'm very worried," she told us, not wanting to give an interview. Due to her advanced age and the stress caused by the trial, she did not want to comment on the espionage affair of which she inadvertently became a part.

As Denník N learned, she significantly assisted the Austrian authorities in investigating the case. Nevertheless, she feels threatened.

According to a source of Denník N acquainted with the investigation, Martin Möller used, for example, her car on his journeys to meet the Russian spy from GRU in Bratislava.

Martin Möller was not at Štrbské pleso only once. In 2010 he returned to the High Tatras again. He just switched the Panorama hotel for the FIS hotel.

Most often, however, he travelled to Bratislava through comfortable borders without checks.

Once it was a conspiracy apartment in Petržalka, where they spent several days; at another time, the Leberfinger restaurant on the Petržalka side of the Danube, beside the Janko Král' Garden, was enough for a short meeting.

Martin Möller also exchanged messages through dead drops in the forests near Vienna, but the number of their meetings in Slovakia confirms what has been talked about very little up to now.

For Russian agents, Slovakia has become a convenient place for espionage.

Recruited in Iran

According to Denník N's source, the Russians probably recruited Martin Möller in Tehran in the late 1980s. The Austrian colonel traveled to the Middle East often, but it was in Iran that the Russians allegedly cast a fishing line – a proposal for cooperation, which Möller seized.

Most recently, before retiring, he worked, according to Austrian media, at the Ministry of Defense's structural planning department. His main motivation seemed to be money, which eventually convicted him.

The Austrian expert Beer believes that Möller had got involved with a Russian agent quite by chance already before the Cold War came to its end and had probably been after some extra salary.

As reported by Austrian media, it was the cash of almost 30,000 euros, with which he was caught in a meeting with an agent of the Russian military secret service GRU, that was one of the main pieces of evidence against him. The evidence was accumulated thanks to a long-term intelligence operation targeting an alleged traitor in the Austrian army.

Then it went fast. Martin Möller was arrested in November 2018 and convicted in the early summer of 2020 for "betrayal of state secrets", "secret intelligence to the detriment of Austria" and "deliberate disclosure of military secrets".

He was friendly. And anti-Semitic

Denník N spoke to a source who knew Möller very personally. "He was very friendly and quickly gained confidences. Sometimes, however, he did not hide that he was close to Nazi ideology. He claimed that the Holocaust did not happen and considered the Slavic nations inferior."

According to the Austrian analyst Gressel, anti-Semitism and far-right views are also a problem in the German army, but in Austria the problem is even more pronounced.

"It also has to do with the fact that the far-right FPÖ managed to get into the government and push its people known for their anti-Semitism into the system," Gressel said

According to him, far-right officials are often close to Russia. "This is related, for example, to their opposition to the European Union or to the emancipation of Slavic nations such as Ukraine," says Gresell. "The connection of Russian secret services to the extreme right in Europe is a generally proven phenomenon."

What he disclosed

GRU agent Igor Egorovich Zaytsev (66), for whom the Austrians have issued an arrest warrant, was according to Austrian media interested in a variety of information on the functioning of the Austrian and German armies and NATO, or information about who has what weaknesses in their army. He was interested in weapon systems, the roles of ground and air forces.

As stated in the verdict, Möller revealed to him the equipment of research and tank units, and provided information about radar stations or air defense systems, NATO projects and the structure of the German army. With the help of agents from partner countries like Austria, Russia can easily keep an eye on the Alliance.

The Russian spy from GRU also provided his agent with special technical equipment. It included a radio that allowed them to communicate with each other. He trained him to use satellite communications as well as basic encryption.

Information from NATO exercises and conferences, where Möller was permitted to participate as a Partner soldier, could also be useful.

Schengen – free zone for spies

One of the other proofs that Russian espionage has been using Slovakia for its own goals was provided at the beginning of this summer by the Bellingcat organization. Investigators found out that one of the accomplices suspected of the murder of a Chechen asylum seeker in a Berlin park in 2019 traveled to Germany thanks to Slovak visas.

He obtained them very easily, for a whole year and for several entries within a few days, without Slovakia's embassy even checking his name. Nothing in his request was true.

In retaliation, Slovakia expelled three Russian spies in August, who operated in Slovakia with diplomatic cover.

Slovak diplomacy has already responded by canceling cooperation with a tourist agency which was used to process visas for the alleged FSB agent.

"The Schengen system is great for spies, and Austria is very open to Russians. They do not pay as much attention to espionage if it concerns other countries and international organizations, as long as it is not aimed at Austrian government institutions," says British expert on intelligence Mark Galeotti.

Slovak politicians generally avoid criticism of the Russian regime, and in 2018, Slovakia was the only V4 country to refuse to expel Russian spies operating in Slovakia under diplomatic cover. Expulsion was expected to be a gesture of solidarity corresponding to that of the Western allies of Great Britain who had expelled about a hundred Russian spies after the attempted assassination of former Russian agent Sergei Skripal in Salisbury in the south of England.

Even typically significantly pro-Russian Budapest applied the retaliatory measure.

Slovakia's then-Minister of Foreign Affairs Miroslav Lajčák was ready to expel the Russians, but Peter Pellegrini's government decided to leave the assassination by toxic novichok without reaction and allowed Russian spies to continue operating in Slovakia under diplomatic cover.

It was not until a few months later that Pellegrini had Russian Colonel Alexander Vinogradov expelled. As Denník N wrote at the time, Pellegrini no longer had a choice.

The Russian GRU agent, under the cover of a military attaché, carried out espionage activities that raised security concerns among Slovak officials.

However, the Austrian approach also raises doubts. Why did they decide to sweep the whole spy affair under the rug? So as not to anger their Russian partner and so that business could continue as usual?

According to the Warsaw Institute, Austrian-Russian cooperation did not suffer even after a major political scandal such as when the leader of the far-right FPÖ party Heinz-Christian Strache promised political benefits to the Russians in exchange for money for his party.

"This, however, did not hamper Moscow's relations with Vienna, especially given that all top Austrian political parties declare themselves as pro-Russian, while the gas sector is the core of cooperation between the two countries. The Austrian oil and gas company ÖMV is involved in the construction of the Nord Stream 2 energy project," writes the Warsaw Institute.

Why Russian spies love Austria

According to Gressel, Austria closed its eyes to communist espionage during the Cold War. "As a result, it gained the status of a bridge between East and West. The most active and cruel secret services in Vienna were the Russian KGB, the East German Stasi, and the Romanian Securitate," says Gressel.

According to him, it is important to realize that the secret services adapted their infrastructure so that they got into business companies, law firms and banks, which were not only established to run business between East and West, but also used to "launder money from KGB operations in the West, the theft of technology or personal enrichment of agencies," says Gressel. This modus operandi, according to him, became crucial between 1989 and 1991, when the Soviet Union collapsed and Germany was united.

"Former state assets, such as black bank accounts, have gone unchecked and are taken care of by former communist agents. Some of these post-communist companies have integrated into Austrian business, such as energy companies, transport companies, savings banks and banks," says Gressel.

All this was possible thanks to their good contacts in the eastern markets. The former agent in Austria also benefited from the political system. "Since all the large Austrian companies are connected to one of the parties – the Socialists, the People's Party, or the Freedom Party, the spies have managed to maintain political influence," Gressel explains.

An example is the Nord Stream 2 project and the consortium behind it. "The whole consortium is nothing more than a Stasi refuge, and ÖMV is a good example of this," adds Gressel.

The expert Beer does not see a connection to ÖMV and Nord Stream but rather an embarrassment of the Austrian government and military for not having discovered this spy internally. "This explains why the prosecution opted for total secrecy, thereby strengthening its argument that this spy betrayed state secrets that still needed to be protected," says the Austrian expert.

Austria also suits the Russians for the strong anti-American stance of the main political parties. "Conservative Catholics hate the Protestant United States for destroying the monarchy in World War I, German nationalists in Austria hate them for destroying the great German Empire, and socialists hate the United States for destroying the Soviet Union during the Cold War," Gressel said.

The Austrian analyst recalls Putin's visit to Vienna in June 2014, when the EU imposed sanctions on Russia after its annexation to Crimea and after provoking the war in Donbas.

"Putin got standing ovations among conservative economists, joked with Christoph Leitel about the partition of Ukraine, and had a warm, friendly conversation with President Fischer and Chancellor Faymann about business cooperation, as if nothing had happened," Gressel said.

According to him, all this explains the lax approach of the Austrian authorities to Russian espionage, even when it might endanger its allies. "Weak espionage laws give Austrian secret services very little competence and opportunities to go after spies. In addition, espionage is a criminal offense only if it is directed against Austria" adds Gressel

An example of this is the case of an Austrian spy who was an agent of the Russian intelligence SVR. "He disclosed information about German Tiger helicopters, but since it was a German company, the Austrians were unable to convict him of espionage," says Gressel.

The most recent example of an Austrian appearing to have signed up for Russia's GRU secret service has been the Wirecard scandal – the head of its operations, the Austrian Jan Marsalek, was close to GRU people, according to the Financial Times. "Marsalek is close to the Russian secret service and is hiding in Moscow, and he has a very good relationship with the FPÖ and with people at the Austrian Ministry of the Interior and Defense," adds Gressel.

North Korea's sabotage plots foiled as UK intelligence cracks Kim Jong-un's secret codes NORTH Korea has had to suspend all secret communications to agents around the globe after its codes were broken by a British counterintelligence unit.

By MARCO GIANNANGELI

PUBLISHED: 12:10, Sun, Sep 6, 2020 | UPDATED: 13:22, Sun, Sep 6, 2020

https://www.express.co.uk/news/world/1332004/north-korea-news-kim-jong-un-plot-MI6

Kim Jong-un is 'having difficulty' reveals North Korea expert

Work by analysts attached to the Ministry of Defence's Defence Digital team at Corsham, Wiltshire, has already foiled three "penetration plots" aimed at causing disruption in France and Australia, sources said last night. The code-breaking, carried out over a period of weeks by six analysts in the underground establishment, followed the recent defection from Hong Kong of a civilian working for North Korea's main external intelligence agency.

One operation was connected to France's contribution to the European Air Group. Another, in Australia, concerned a military air base.

The third, also in Australia, was described as an attempt to sabotage an agricultural trade deal between Canberra and Indonesia, suggesting that - unusually for a country with little respect for its northern neighbour - Pyongyang was assisting China.

The hermit kingdom, as North Korea is known, remains virtually technologically isolated with even those in its elite allowed only mobile phones attached to a domestic network and which cannot communicate with the outside world.

Traditionally, spymasters in Pyongyang used so-called numbers stations to relay encrypted commands, consisting of random numbers and obscure page references, to its officers and agents around the world.

But one scrambled broadcast last week contained a message that will change the nature of how it issues commands for the foreseeable future.

The message relayed information about the breaking of codes and instructed agents to simply "await further instructions".

Western intelligence agencies believed they already possessed the key to Pyongyang's numbers-based code.

To MI6's surprise, however, the unidentified defector revealed that there was a second "code within a code" about which the West knew nothing.

MI6

MI6 revealed a second 'code within a code'

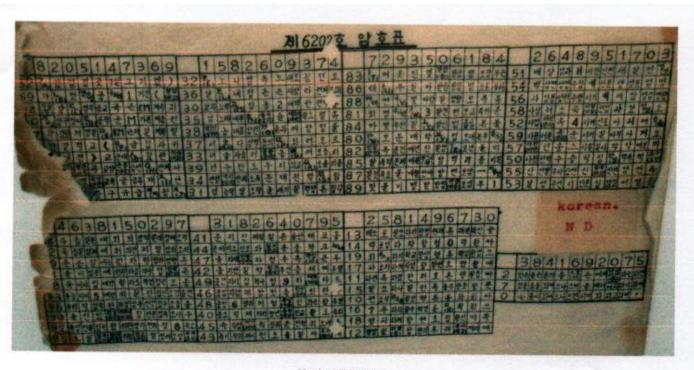

News that Britain had broken the code was immediately relayed to the intelligence chiefs in the US, Canada, New Zealand and Australia.

Sources said that, even with a partial key, it took "several weeks" for code-breakers to fully work it out.

Last night a Whitehall security source added: "Until we were passed details by a person in Hong Kong a couple of months ago, we had no idea that another code had been added to the first.

https://www.express.co.uk/news/world/1332004/north-korea-news-kim-jong-un-plot-MI6

For those of you who 'Don't know' this is a sample of the Korean Matrix used for decoding. Note the Syllables:

North KoreanSample message:

For a better understanding of how this works see an actual North Korean decode grid 'Number 6202 Table.'

Each large square has a hundred small squares, each with its own Korean character, each character a syllable. Look at the last lower large square: Descending numerals randomly read: 13 14 19 17 11 15 10 16 18 12; the horizontal numerals, also random: 2 5 8 1 4 9 6 7 3 0.

So using table 6202 across the entire content:

Page38, No 1 means 'South Korea'

Page 13, No 7 means 'Accomplished'

Page84, No 8 means 'Radio'

Page59, No 6 means 'Seoul'

This message clearly indicating to the Agent in South Korea that a radio has been made available in Seoul.

'That's All'

CHINESE EMBASSY in GUYANA

©PLdn2006

As approached, the full complex from one side only. Not possible to walk around due to constraints of time and local safety.

As promised last time here are two images taken by PLdn during a trip to Guyana on 'business.' The Embassy itself is set in a lush part near the Botanical Gardens. However approaching the embassy by road it can be seen the usual antenna farm associated with the Chinese Embassies that I've seen in different countries is indeed present here. Of the two HF antennas [One looks like a Rhode & Schwarz knock-off] they certainly weren't on a bearing for China.

Two of the HF antennas [there are more along with V/UHF in the compound] and the satellite dish.

I read that China supplied the CARICOM [similar to EU but serving WI nations in the Caribbean] supplied the HQ, also located in Guyana and a very nice building indeed, with all its IT and computer needs.

The piece, written by an Israeli gent stated that infrastructure was leaky and Guyana did not have the expertise to plug any leaks of data or indeed ward off cyber interference.

Guyana used to produce Aluminium [Bauxite in the Mackenzie District], Rice with many polders, especially in the Demerara Region [So-called Mad Fong], Sugar, also from the Demerara district [note the name, this soft and malleable sugar only came from Demerara cane fields and processed at Grove before being shipped. Gold and Diamonds also as well as a selection of very decent Rums [Before its demise the tots in the Royal Navy used Demerara Rum].

Nowadays, the Bauxite and Sugar industries are all but gone. The major Cane Field [and employer] of the West Bank Demerara has now closed and is up for housing development. Gold and Diamond is still producing but not at the same rate as before. Rice, a staple diet in Guyana is not being exported as it used to be in the days of racial discrimination where one part of the six races ate the good stuff but the rest had to put up with second rate crop. No food being imported great use was made of the fertile soil and it didn't do to be a chicken because you'd end up on a plate. Rumour says that the Georgetown zoo had two elephants until closure at Christmas when they disappeared; the claim is they were simply eaten. The zoo also had a display of the large edible rat and that exhibit was forever being restocked I'm told.

Since the demise of Linden Forbes Samson Burnham a self proclaimed president for life [Think Mugabe and Amin here] where the Indian stock was taken and turned over to his Afro-Guyanese nationals things have seriously bettered. Food is imported and chickens have a longer life, it seems. Same as Zimbabwe; fat of the land turned over to those with no skills and in many cases motivation to maintain of better what they were given.

But, Guyana now has an oil field that is up and producing. Enter the Americans – after all if its oil its theirs – and this provides an expectation of events. Before the Chinese it was the Russians. I experienced them first hand in 1978; as we moved though immigration that wasn't for them. Six Russians who were on our plane [Pan Am 227 from Trinidad] just pushed others out the way and vaulted the gate. Out in public areas the move to the Marxist ideal was noted. Everyone was 'Comrade' and there were notes of things to achieve for the day, the daily Presidents Prescription. What a load of utter bollocks.

Remember Gina Miller – I'm a British citizen? Her father was something in Burnham's Govt in the Legal Dept. He was of Indian extraction and when he briefly took shelter in the UK I had occasion to meet him and his cronies in a non-descript house in Greenford, London. Thereby hangs a tale not to be told here.

Well, the US has a very nice Embassy there too. I was prohibited from taking pictures as there was a very sudden terror alert. Confronted by someone with a rifle I had no choice but to go.

Round the back of the Embassy is the Everest Cricket Ground; that afforded an even better view of the antenna - thank you very much!

Approaching from the side

Dish just visible but note cluster of V/UHF stuff. Image taken just before I was told to go

©PLdn2006

This is a general image taken with my back to the Everest Cricket Ground. Look inside the red indicator – one of the RF transparent boxes that appear on US Embassies worldwide and are known to sample Cellular and other traffic of the host country.

The US Embassy in Berlin had a complete wall made of dielectric material and the UK Embassy a few hundred yards away sported a rather grand and cylindrical construction of the same dielectric 'cloth' we see here and on other numerous embassies.

Not wanting to be outdone a little further up the street [is it Unter Linden Strasse?] in Berlin is the Russian Embassy, situated over Aeroflot Offices. No shortage of antennae on their roof either; VGDSh caged dipoles and a couple of discones noted. They're all at it, it seems.

Did the UK Consulate in Guyana have anything atop it? Yes it did, if you want to see what you'll have to go to Main St, Georgetown for the pleasure. *Tnx PLdn*

If you think my writings on CARICOM history is cobblers read this:

CARICOM HQ Georgetown, Guyana

Barbados's move to drop the Queen as Head of State 'is being driven by Chinese interference', claims MP

Tom Tugendhat said Beijing was playing large role in the island nation's decision **Barbados signed on to China's 'Belt and Road' initiative in 2019, opening up trade** CIA intelligence about Chinese activities in Barbados reportedly shared with UK By KUMAIL JAFFER FOR THE DAILY MAIL and JAMES GANT FOR MAILONLINE

PUBLISHED: 00:46, 23 September 2020 | UPDATED: 16:10, 23 September 2020

https://www.dailymail.co.uk/news/article-8762119/Barbadoss-moves-drop-Queen-Head-State-driven-Chinese-interference.html

Pressure from China is driving the campaign for Barbados to become a republic, a Conservative MP has claimed.

Tom Tugendhat, chairman of the foreign affairs committee, said Beijing was playing a large role in the island nation's decision to remove the Queen as head of state.

Barbados signed on to China's 'Belt and Road' initiative in 2019, opening up trade between the two countries.

Meanwhile CIA intelligence in the US about Chinese activities in Barbados has now reportedly been shared with Britain.

Mr Tugendhat told the Times: 'China has been using infrastructure investment and debt diplomacy as a means of control for a while and it's coming closer to home for us

'British partners have long faced challenges from rivals seeking to undermine our alliance.

Today we're seeing it in the Caribbean. Some islands seem to be close to swapping a symbolic Queen in Windsor for a real and demanding emperor in Beijing.'

China has poured billions of dollars of investment into the Caribbean in recent years while signing tax and trade deals in an attempt to wrest the region out of the West's sphere of influence and bring it under the sway of Beijing.

The Chinese government has invested at least \$7billion in six Caribbean nations since 2005, records complied by the American Enterprise Institute show - building roads, ports and the five-star Baha Mar casino and resort in the Bahamas.

However, the true scale of Chinese investment in the region - which can often be opaque and funneled through private companies - is thought to be much higher.

Meanwhile eight countries have signed on to Beijing's Belt and Road initiative, including Jamaica, Barbados and Trinidad and Tobago.

Agreements have been signed place to deepen trade ties along with building bridges and airports, an improving energy and telecommunications networks.

China has been particularly generous with nations that have agreed to cut relations with Taiwan - a country in the East China Sea which Beijing claims as a province - and recognise the Communist Party as the supreme authority.

In 2005, China rewarded Grenada, which has an annual GDP of just \$1.8billion, with a brand new \$55million cricket stadium after it cut relations with Taiwan.

Similarly, in 2018, the Dominican Republic was lavished with Chinese investment thought to have topped \$3billion after it also cut ties with Taipei.

Barbados, meanwhile, is has received at least \$490million, mostly as investment in the tourist sector, but is also thought to be benefiting from private deals.

The country has established beneficial tax deals with Beijing in recent years in an attempt to make itself a hub for Chinese financial looking to invest in South America.

In 2019, a permanent branch of Invest Barbados was established in Beijing to help attract this investment.

Also last year, Barbados signed a Memorandum of Understanding with China, making it part of the country's Belt and Road initiative - otherwise known as the new Silk Road.

The agreement promises development of Barbados's shipping, aviation, infrastructure and agriculture sectors.

Barbados has maintained strong relations with Britain even after gaining independence in 1966, but last week announced it would become a republic in 2021.

A speech written by Prime Minister Mia Mottley quoted the Caribbean island nation's first premier Errol Barrow's warning against 'loitering on colonial premises'.

Buckingham Palace has said Barbados' intention to remove the Queen as head of state and become a republic is a 'matter' for the Caribbean nation.

Reading the speech, Governor-General Dame Sandra Mason said: 'The time has come to fully leave our colonial past behind. Barbadians want a Barbadian Head of State.

'This is the ultimate statement of confidence in who we are and what we are capable of achieving.

'Hence, Barbados will take the next logical step toward full sovereignty and become a Republic by the time we celebrate our 55th Anniversary of Independence.'

Asked to comment on the Commonwealth country's plans a palace spokesman said: 'This is a matter for the government and people of Barbados.'

Downing Street said it was a 'decision for Barbados and the Government there' but that Britain would continue to 'enjoy a partnership' with the Caribbean island nation as members of the Commonwealth.

A Number 10 spokesman said: 'We obviously have a shared history and remain united with Barbados in terms of history, culture and language, and we will continue to have and enjoy a partnership with them as members of the Commonwealth.'

The country gained its independence from Britain in 1966, though the Queen remains its constitutional monarch.

In 1998, a Barbados constitutional review commission recommended republican status, and in 2015 Prime Minister Freundel Stuart said 'we have to move from a monarchical system to a republican form of government in the very near future'.

Most Caribbean countries have kept formal links with the monarchy after achieving independence.

Barbados would join Trinidad and Tobago, Dominica and Guyana if it proceeds with its plan to become a republic.

Jamaica has also flagged such a transition, with Prime Minister Andrew Holness saying it is a priority of his government, but has yet to achieve it.

Barbados took another step towards independence from the UK in 2003 when it replaced the London-based Judicial Committee of the Privy Council with the Caribbean Court of Justice, located in Trinidad and Tobago's Port of Spain, as its final appeals court.

Former Prime Minister Owen Arthur promoted the idea of a referendum on becoming a republic in 2005, however the vote was called off due to concerns raised by the Electoral and Boundaries Commission.

Barbados: The country's colonial history

The Sugar Revolution, the introduction of sugar cane from Dutch Brazil, in the 1640s was highly lucrative but came at great social cost

Barbados was one of the oldest English settlements in the West Indies, being surpassed only by Saint Kitts.

The countries' historical ties date back to the 17th century and involve settlement, post-colonialism and modern bilateral relations.

Since Barbados gained its independence in 1966, the nations have continued to share ties through the Commonwealth, with the Queen as Monarch.

The Barbadian Parliament is the third oldest in the entire Commonwealth and the island continues to practice the Westminster style of government.

Many of the historic Anglican churches and plantation houses across the island show the influence of English architecture.

In 1627, 80 Englishmen aboard the William and John landed on the Caribbean island and founded Jamestown (close to today's Holetown), in the name of King James I.

The early settlers struggled to develop a profitable export crop and faced difficulties in maintaining supplies from Europe.

However, the Sugar Revolution, the introduction of sugar cane from Dutch Brazil, in the 1640s was highly lucrative and over the next decade more than two thirds of English emigres to the Americas went to Barbados.

But while this shift to sugar yielded huge profits, it came at a great social cost. Thousands of West African slaves were shipped across the Atlantic to work the plantations and workers suffered from low wages and minimal social services.

It is estimated that between 1627 to 1807, some 387,000 Africans were shipped to the island against their will and the country shifted from having a majority white population to a majority black population.

On 28th August 1833, the British Government passed the Slavery Abolition Act, and slaves across the British empire were granted emancipation.

Barbados remained a British colony until internal autonomy was granted in 1961.

The country became fully independent on November 30, 1966, during a time when the country's economy was expanding and diversifying.

Since then, the Barbadian Parliament has remained a constitutional monarchy and parliamentary democracy, which is modeled on the British Westminster system of government.

In 2008, British exports to Barbados stood at £38 million, making it Britain's fourth-largest export market in the region.

In recent years a growing number of British nationals have been relocating to Barbados to live, with polls showing that British nationals make up 75–85 per cent of the Barbados second home market.

Finally in this wander through Chinese activities we read:

Belgium probes top EU think-tanker for links to China EU-Asia Centre's Fraser Cameron denies the allegations, saying he has no access to secret information.

By BARBARA MOENS 9/18/20, 12:01 AM CET Updated 9/20/20, 8:10 AM CET

https://www.politico.eu/article/belgium-security-service-probes-top-eu-think-tanker-for-links-to-china/

A former U.K. diplomat and ex-European Commission official who runs a Brussels think tank is being investigated by Belgian security services on suspicion of passing sensitive information to China — allegations that he denies.

Fraser Cameron, who directs the EU-Asia Centre, rejected as "absurd" the investigation into his alleged contacts with two Chinese journalists accredited in Brussels who — according to Belgian security officials speaking on condition of anonymity — also work for the Chinese Ministry of State Security and the Chinese military. The Belgian officials who spoke to POLITICO also briefed Belgian newspapers De Standaard and L'Avenir on the case.

It is unclear where the investigation might lead, since the charges he might face were not specified and espionage — which was cited by the Belgian officials — is not treated as a crime under Belgian law.

According to a person close to the case, the federal prosecutor's office has opened an investigation into Cameron, though the prosecutor's office itself declined to comment. The case was opened on the basis of the Belgian state security investigation that judged Cameron's alleged activities could constitute a risk for European officials, though they did not specify what kind of risk he might pose.

Contacted by POLITICO for comment, Cameron said in an email that the allegations "are without foundation."

He stressed that he has "a wide range of Chinese contacts as part of my duties with the EU-Asia Centre and some of them may have a double function," but added: "I retired 15 years ago from official employment and have zero access to any sensitive information."

Fraser Cameron, in the pink shirt at right, listens to a speaker at Friends of Europe's EU-China briefing last March | Francois de Ribaucourt/Friends of Europe

Cameron said his lawyer was not aware of any case having been opened, adding: "The allegations themselves are obviously damaging but they really are absurd if you just stop to think about them for a minute."

Cameron, who according to his entry on the EU-Asia Centre's website has "lived and worked in Belgium for 20 years" and is "a visiting professor at several universities in Asia," is suspected by Belgian intelligence of receiving thousands of euros for providing confidential — but not necessarily classified — political and economic information to the Chinese regarding European institutions.

In a separate email to L'Avenir, seen by POLITICO, Cameron said the EU-Asia Centre receives "a small annual grant" from the Chinese diplomatic mission to the EU, to help organize events on EU-China relations. "This is the only funding received from the Chinese," he said.

Cameron added, in his response to L'Avenir, that the EU-Asia Centre's recent activities, including a webinar on this week's virtual EU-China summit, demonstrated "that we are highly critical of China!"

'Close to Beijing'

POLITICO was told the names of the two Chinese journalists allegedly involved, but was unable to confirm their status independently.

Belgian security officials said the suspect activities had been going on for a number of years, but they would not say whether that included Cameron's time at the European Commission, before his retirement in 2006. One official in the Commission, speaking on condition of anonymity, said Cameron was known to be "very close to Beijing."

Since espionage is not classified as a crime in Belgium, public prosecutors have long called for an update of the country's law on espionage, which dates back to the 1930s.

That means prosecutors may have to identify other criminal offenses if they want to press charges — which happened in the case of former Belgian diplomat Oswald Gantois. Investigated for leaking information to Russian secret services throughout his career, he was convicted in 2018 of illegal association with the purpose of committing forgery.

Public prosecutors have cited Belgium's role as a diplomatic hub, hosting the EU institutions and NATO headquarters, as justification for broadening the definition of espionage in national law to facilitate prosecution.

The current federal justice minister, Koen Geens from the Flemish Christian Democratic party CD&V, is trying to push an update of the espionage law through parliament but has made little progress because of an impasse in forming a government since late 2018.

"The minister and CD&V have been asking for a long time to vote on the proposal," said a spokesperson for the minister.

Earlier this year, German prosecutors revealed that they suspected another former EU official of passing information to China. German national Gerhard Sabathil, a diplomat turned lobbyist, denied the allegations and has so far not been arrested nor charged.

A Royal Observer Corps Bunker in West Beckham is going under the hammer at auction. Picture: Dedman Gray

If 2020 has left you with a growing urge to escape from it all and hunker down with a good book, then a nuclear bunker in north Norfolk could be just what you're after.

A Royal Observer Corps Bunker and its contents in West Beckham is going under the hammer. Picture: Dedman Gray

Located in West Beckham, between Cromer and Holt, a former Royal Observer Corp Bunker and adjoining plot has come onto the market with a combined starting price of £21,000.

The unusual, slightly eery, property is 3.6m below the ground, accessible by a ladder and measures approximately 5.5m by 2.2m.

Built in the early 1960s, it remained in used until 1991 and has been left as it was, with all the ephemera from its working life, included in the sale.

Freddie Botfield, associate at Whirledge and Nott which is helping to sell the property, said bunkers such as the one in West Beckham did not come onto the market very often.

A Royal Observer Corps Bunker in West Beckham is going under the hammer at auction. Picture: Dedman Gray

"It's an interesting property for Norfolk. All [the bunkers] were built to specific standards and specifications and there are several across the country.

"It's a bit of a time capsule," he said.

Mr Botfield said the site and bunker had lots of potential both to be developed into a habitable space.

He said: "It's all subject to planning permission you could keep it as a bunker, someone might find it inviting in these times to bunker down and get away from it all. It could potentially be a holiday home, it hasn't got a working toilet at the moment but I'm sure that's something that could be sorted."

"You could drive past it without knowing that the bunker was there at all. You have really got to look quite close to see any form of site on Google Earth. It's quite hidden away in quite rural area," he said.

Mr Botfield said since the property and its adjoining plot, which was once used for growing daffodils, had been listed online it had received lots of interest.

"We only launched it on [Tuesday] and the phones have already started ringing for it, we've had lots of enquiries," he said.

Royal Observer Corps Bunker will be sold via an online auction run by Whirledge and Nott and Dedman Gray Auctions on September 30.

A very good video can be seen on this site about the bunker.

Inspired by a hard copy from Sunday Telegraph of 6^{th} September entitled 'From shoelace saws to escape boots:gadgets from the real Q' [see: https://www.pressreader.com/uk/the-sunday-telegraph/20200906/281934545349851] and sent in by our sometimes Russia Correspondent we present:

The maverick genius who was the REAL 'Q': Ever wondered who inspired James Bond's bizarre gadgets? A new book reveals the gloriously eccentric story of 'MI9' and the boffin who invented exploding coal, steel-cutting shoelaces and domino maps By JANE FRYER FOR THE DAILY MAIL

PUBLISHED: 00:22, 8 September 2020 | UPDATED: 10:43, 9 September 2020

 $\underline{https://www.dailymail.co.uk/news/article-8707577/Ever-wondered-inspired-James-Bonds-bizarre-gadgets-New-book-reveals-genius-REAL-Q.html.}$

Whether it's bagpipe flame-throwers, spear-wielding umbrellas or sports cars that turn into submarines, everyone has a favourite James Bond spy gadget, courtesy of the ever-resourceful 'O' Branch.

While it has long been assumed that novelist Ian Fleming used an MI6 department as the inspiration for 007's brilliantly bonkers gadgets — exploding shark capsule, anyone? — credit should actually go to MI9, or 'Military Intelligence 9', as revealed in a new book, MI9: A History Of The Secret Service For Escape And Evasion In World War Two, by Helen Fry.

A department so top secret that most people have never even heard of it, it relied heavily on the inventions of a prematurely balding maverick called Christopher Clayton Hutton.

'Clutty', as he was known, was a former soldier, airman and journalist, who had been obsessed with escapology and illusions since boyhood. He was once described as 'mad and brilliant', and would have given today's Q a run for his money when it came to inventiveness.

Set up in 1939 and run by Major Norman Crockatt (later Brigadier) and Clutty and Charles Fraser-Smith, an equally brillant inventor and close friend of Ian Fleming, MI9 was responsible for helping airmen and prisoners find their way home from behind enemy lines.

To this end, it supported resistance networks and encouraged a philosophy of 'escape-mindedness', drumming into every soldier that it was their duty to try to escape.

A single airman took three months to train at a cost of £15,000, so the War Office needed them back.

In turn, the boffins at MI9 did everything they could to support them, designing and supplying countless gadgets including pencil cameras, daggers hidden in pens, wire saws hidden in shoe laces and playing cards containing maps of Europe.

Clutty, in particular, was relentless in his task. He hired a magician to help devise hidden compartments and built himself an underground bunker in the middle of a field — in the grounds of the MI9 headquarters in Wilton Park, Beaconsfield — so he could work undisturbed.

Better than Bond

Flexible wire saws, known as Gigli saws and capable of cutting through inch-thick steel bars were hidden in shoelaces

Exploding coal - hollowed and filled with explosives - was popular in an emergency.

Pencils were used to conceal tightly rolled maps on ultra-fine silk that neither rustled nor wore out.

Innocuous-looking fountain pens unscrewed to reveal three-inch, double-edged leaf-shaped blades.

Such was his disregard for protocol that he was frequently in trouble with the police and authorities for helping himself to Army stocks without permission, and would have given today's Health and Safety executives multiple coronaries.

But he was a genius.

It was he who persuaded Waddington to adapt their Monopoly sets into escape kits, complete with maps of Europe and compasses. He also helped design the standard issue maps, nearly half a million of which were printed on non-rustling silk with non-running ink, which could be hidden inside a chess piece.

Naturally, it was also Clutty who came up with a compass concealed in a jacket button with reverse screw threads, on the basis that it would never occur to the ever-orderly German mind that something might unscrew the wrong way.

He was right.

And in 1942, every invention was carefully recorded in a large red leather-bound catalogue entitled Per Ardua Libertas — Liberty through Adversity — for the benefit of visiting American intelligence officers.

Of course, unlike 007's flaming bagpipes and killer umbrella, everything MI9 created was small enough to be hidden inside something else.

Clutty's gadgets might not have been quite as flamboyant as Bond's bullet-proof Aston Martin or ski pole gun, but they actually worked.

Of the 35,000 British and Allied troops who escaped and made it to safety during the war, more than half were carrying one of his silk maps, and most were aided by at least one of the following inventions.

DOMINO MAPS

Hacksaws, silk maps and compasses were hidden in Monopoly boards, boxes and pieces.

Miniature cameras and receivers were disguised in dartboards, ping-pong sets and snakes and ladders games. Shove-ha'penny boards contained radio components, chess pieces concealed foragers' ink and dominoes concealed a map of France.

Chess set maker Jaques of London was commissioned to draw up plans for a box with hidden compartments, and knights were adapted to include a watertight compartment for special ink for document forgery.

Waddington also produced special packs of cards designed to fall apart when dropped in water, to reveal 48 overlapping sections of a map of Europe. The four aces provided a separate map of roads, railways and rivers.

COLDITZ KITS

The Geneva Convention allowed prisoners to receive parcels —including food, clothing and games (to relieve boredom) — from families and relief organisations.

So Clutty invented a slew of fictitious charities and soon every sixth food parcel and ration pack sent to prisoners of war contained some of his inventions.

Clutty's kits are credited with helping 316 escape attempts from Colditz Castle in Saxony, Germany, with 32 men making it home.

INVISIBLE INK

Compasses were hidden in everything from match boxes to razor blades. Hutton invented a particularly effective model from a magnetised razor blade — when the blade was hung on a thread, the 'G' in Gillette pointed north.

Another success was an invisible ink developed for plain linen handkerchiefs which, when soaked in urine, revealed a map.

But it was only a fleeting map — a quick dip in water caused the map to disappear again.

CUT-OUT CLOTHES

Grey woollen blankets sent to prisoners of war would arrive with maps or clothes patterns printed with invisible ink.

After a quick dip in water mixed with chemicals smuggled separately in jam pots, hey presto, the design became visible and the prisoners could tailor an outfit for their escape.

ESCAPE BOOTS

RAF men received special 'escape boots' with hollow heels containing silk maps, a compass, a file and a small knife, so that they could cut away the ankle section, creating black shoes which could pass as civilian footwear.

A nice idea, but a rare Clutty failure. They were not warm enough during winter flights, prone to waterlogging in heavy rain and were later abandoned by MI9.

MI9: A History Of The Secret Service For Escape And Evasion In World War Two by Helen Fry. Published by Yale, £20.

Thanks Lech!

The name's Bond... the Real James Bond! Documents reveal spy called James Bond worked at British Embassy in Warsaw in 1960s TFN REPORTER SEPTEMBER 22, 2020

 $\underline{\text{https://www.thefirstnews.com/article/the-names-bond-the-real-james-bond-documents-reveal-spy-called-james-bond-worked-at-british-embassy-in-warsaw-in-1960s-15931}$

Investigators at the Institute of National Remembrance found documents showing that the man, whose full name was James Albert Bond, arrived in Warsaw on February 18, 1964.

A British secret agent working in Poland during the Cold War was a portly gentleman called James Bond who was "interested in women", researchers have discovered.

Investigators at the Institute of National Remembrance (IPN) stumbled across documents showing that the man, whose full name was James Albert Bond, arrived in Warsaw on February 18, 1964, using the cover of secretary-archivist of the British Embassy's military attache.

Secret documents show the man was placed under surveillance by the counterintelligence department of the Interior Ministry. IPN/Facebook

But according to the documents, his real mission was to 'penetrate military facilities."

Posting their discovery on Facebook, the IPN researchers said: "James Bond came to Poland on February 18, 1964.

James Albert Bond arrived in Warsaw on February 18, 1964, and was assigned undercover to the then British Embassy. CC BY-SA 3.0 pl

"His official position is secretary-archivist of the British Embassy's military attache. The arrival of such a famous agent did not go unnoticed by the officers of Department II (counterintelligence) of the Ministry of the Interior.

"An operational surveillance case code-named "Samek" was established and he was placed under strict surveillance.

The documents also reveal that "In October and November 1964, he went with two attache employees to the Białystok and Olsztyn provinces to "penetrate military facilities." IPN/Facebook

"Bond was found to be talkative but very cautious and was interested in women.

"Contacts with Polish citizens - not found. In October and November 1964, he went with two attachae employees to the Białystok and Olsztyn provinces to "penetrate military facilities."

Born in Devon in 1928, the 36-year-old agent's mission lasted less than a year. IPN/Facebook

Born in Devon in 1928, the 36-year-old agent's mission however lasted less than a year.

The IPN said: "The observation of agent 007's actions probably did not go unnoticed, he probably said that there was no chance of gaining valuable information.

The real James Bond may not look like the fictionalised character portrayed by Daniel Craig, but like Ian Fleming creation, the real Bond was "interested in women."

IPN/Facebook/Omega

"Therefore, on January 21, 1965, James Bond left the territory of the Polish People's Republic.

"After his stay, there were still records and fragmentary documents concerning the operational observation.

Thanks Lech!!

Idea for that always wanted Christmas Present:

Who wants to be seen dead wearing these?

'Royal' Since when?

00 section?

The Crown is totally incorrect, usually closed it is often shown with a Lion above facing left

The Lion and the Unicorn seen on the Royal Coat of Arms are facing the wrong way!

Altogether a knock off Made in China perhaps? [Can't see the Chinese making such a hash to be honest, schoolboy and 3D printer more like]

This will be the last newsletter of 2020; the list owners and moderators particularly wish all those who have contributed throughout 2020, our members, those of N&O and Priyom and all other readers Compliments of the Season.

No idea what its about but it looks good!

Perhaps one of our Russian Speakers might care to translate please?

M23 O ICW

A Surprise from M23 - Calls change from Numeric to Alpha & Alpha-Numeric

Once again we are indebted to Ary, (AB), and his associate dxers for alerting us to this latest series of transmissions from M23. Thanks also to Danix whose report added the early transmission to the set. Our thanks also to Peter, (PoSW), who found the station active from 11 October. Peter's logs, notes & comments are included as a separate report below.

In a departure from all previous transmissions the calls logged in this sequence consist not of three numbers, but of either three letters or a mix of numbers & letters which led to some confusion and speculation as to whether this was actually an M23 transmission or not. Further study of the transmissions confirmed that the signal strength, timing & length of transmissions did indeed match M23 & this was confirmed as the other schedules were discovered.

Five calls were sent over the series of schedules – 3OS, 5OS, SET, OTE & ST3. All calls remained unchanged within their individual schedules / slots for the duration of the series.

It was noted that whereas the original transmissions were quite accurate, this new series were less so, with some variations in start / finish times & duration. In addition the current sequence would always start & end with a full sequence, whereas previous transmissions would often cease partway through a number.

The daily schedules were heard until Wednesday 28 October. On Thursday 29 October the 0758z & 0858z transmissions were sent as normal but the four late schedules were missing. This proved to be the last transmissions from M23 in October. However, as we publish this newsletter reports of more activity are coming in from 03 November – This will be covered in the next newsletter.

Daily Schedule of Transmissions Logged from 11 October – 21 October (PoSW)

| Time * (UTC) | Frequency (KHz) | Duration (Minutes) | Call |
|--------------|-----------------|-----------------------|------|
| 1008 – 1028z | 5345 | 20 | 5OS |
| 1158 – 1218z | 5345 | 20 | 5OS |
| 1818 – 1833 | 5345 | 15 | 3OS |
| 1858 – 1913 | 5345 | 15 | 3OS |

^{*} Standard timing are shown in the chart. Actual times sometimes varied by + - 1 minute.

Daily Schedule of Transmissions Logged from 20 October – 29 October (All Monitors)

| Time * (UTC) | Frequency (KHz) | Duration (Minutes) | Call |
|--------------|-----------------|-----------------------|------|
| 0758 – 0828 | 10184 | 30 | OTE |
| 0858 – 0918z | 10184 | 20 | ST3 |
| 1543 - 1613 | 8166 | 30 | SET |
| 1628 - 1658 | 8166 | 30 | SET |
| 1817 – 1832 | 5345 | 15 | 3OS |
| 1858 – 1913 | 5345 | 15 | 3OS |

^{*} Standard timing are shown in the chart. Actual times sometimes varied by + - 1 minute.

M23 Activity Report from PoSW

Unusual variant of M23 CW:- First noted in the second week of October, what appears to be a somewhat different version of the M23 Morse station often noted in the past sending a group of three figures slowly for some considerable period of time, most recently logged in June of this year on 5345 kHz. This same frequency has been active with an unusual variant of M23 sending a group consisting of one number and two letters:-

11-Oct-20, Sunday:- 1202 UTC, 5345 kHz, slow CW sending, "5OS" - second character is "O" as in Oscar, not a zero. Strong signal, stopped just after 1218z Left a receiver on 5345 within earshot but nothing more heard until later in the day:-

1818 UTC, sending "3OS" this time, weaker signal than earlier in the day, stopped approx 1833 UTC.

1858 UTC, starting up with "3OS" again, stopped after 1913z.

Investigating further on the following day:-

12-Oct-20, Monday:- 1008 UTC, just after, receiver left on 5345 came to life with slow "5OS", a brief key-down "dit" for want of a better description had been

heard just after 1005z. Stopped after 1028.

1158 UTC approx, starting up again, "5OS", stopped after 1218z

1818 UTC, after, "3OS", stopped after 1833z. 1858 UTC, after, "3OS", stopped after 1913z.

13-Oct-20, Tuesday: 1008:15s UTC, "5OS" until 1028:15s, pre-transmission 'dit' at just after 1005z.

1158:20s approx, "5OS" again, stopped at 1218:18s.

1818:20s UTC, "3OS", pre-transmission 'dit' heard 1815:30s UTC, stopped 1833:20s.

1858:18s UTC, "3OS", stopped after 1913z.

Looks like a consistent daily schedule, 1008 and 1158 UTC, sending "5OS" for 20 minutes and 1818 and 1858 UTC, sending "3OS" for a mere 15 minutes. No activity heard on 5345 at any other time of the day.

Managed to monitor at least two of these transmissions on each of the following days, 14th, 15th 16th Oct, never failed to appear as expected.

17-Oct-20, Saturday:- At home all day, all four transmissions logged: 1008:10s UTC, "5OS" until 1028:10s; 115

1008:10s UTC, "5OS" until 1028:10s; 1158:10s UTC, "5OS" until after 1218z. 1818:8s UTC, "3OS" until 1833:7s; 1858:9s UTC, "3OS" until 1913:8s.

Continuing the monitoring on the following days, showed up as expected on the 18th, 19th, 20th and 21st, start-up times a second or two earlier with each passing day.

22-Oct-20, Thursday:- No sign of the 1158 start "5OS" sending when checked after arriving home just after 1200 UTC, looked like this schedule had come to an end; however, the "3OS" transmissions later on appeared as expected at around 1818 and 1858 UTC for the usual fifteen minutes.

23-Oct-20, Friday:- Nothing heard at 1158 and 1258 UTC. The evening transmission appeared as usual:-

1818 UTC, strong signal, "3OS", started a second or two before 1818z, pre-transmission "dit" heard around 1815z.

1858 UTC minus two seconds, "3OS", stopped at 1912:56s UTC according to my 60 kHz controlled clock pre-transmission "dit" heard at 1855z exactly.

These 1818 and 1858 UTC transmissions have continued to appear daily into the last week of October, starting a second or two earlier with each passing day. Stayed on UTC with the ending of British Summer Time so now on an hour earlier local time, 6.18 and 6.58 pm

Update:- Ceased in the last days of the month, clean forgot to listen on Thursday 29-Oct and on Friday 30 -Oct nothing heard at either of the two time slots.

(Many thanks for a most excellent report Peter – This added additional logs & information to that we had already received – Ed)

Thanks to Ary, Brian, Daniel, Paul, PoSW, & Richard for their logs & contributions

Morse Stations - Not Number Related

M51a Spreads it's Wings & Associated Station F9TM is Heard Active

After what seems like a very long period in which it appeared to have taken root on the core frequencies of 3881//6825kHz, M51a was once again heard elsewhere on the short wave. Whether this is an indication that the station will once more be popping up on various frequencies across the bands, as was once the case, remains to be seen.

In addition, Peter, (PoSW), managed to log F9TM, the amateur station that has long been associated with the M51 group of stations in action on the 80m band. Good catch Peter. Here is his report;

Unusual Activity From M51a:-

The French CW Morse station, M51a / FAV22 was active on frequencies other than the usual 6825//3881 kHz in September, all frequencies to the nearest kHz:-

11-Sept-20, Friday:- 1748 UTC, 5429 kHz, 5 letter groups similar to those usually heard on 6825 and 3881, strong signal, still on when checked at 1815, 1900 and weaker at 1950z. Tuning around just after 1950 found a parallel frequency, 5096 kHz, strong signal.

13-Sept-20, Sunday:- 0557 UTC, 3253 kHz, strong CW, 5 letter groups.

0644 kHz, 3579 kHz, parallel frequency found inside the 80 metre amateur band, strong. Stopped sending after 0648 UTC.

0701 UTC, 3579 kHz, radio had been left on this frequency and while I was partaking of my breakfast became aware of slow CW coming from the radio room, "VVV DE FAV22" start-up routine. Fairly sure I heard "QLH 3881/6825 kHz although it was not on these frequencies.

17-Sept-20, Thursday:- 1523 UTC, 5429 kHz, 5 letter groups, found parallel frequency on 3536 kHz inside the 80 metre band. Checked at 1714z was sending a list of F- prefix amateur call-signs, then "CQF CQF DE F9TM F9TM...." and plain text in French, managed to get, "Reseau National Francais", something like, "French National Network", I think. This modus operandi has been noted before, on 28-March-19 and 4-April-19 to give just two examples, also Thursdays so perhaps this is a special activity reserved for that day of the week.

21-Sept-20, Monday: 0629 UTC, 3579 kHz, 5 letter groups, strong signal. Parallel found on 3293, also strong.

25-Sept-20, Friday: 0631 UTC, 6825 // 3881 kHz, 5 letter groups, now on the usual frequencies, has been content to stay here since.

(Thanks for another excellent report Peter – Ed)

And onto PoSW's logs and comments:

First + Third Thursdays in the Month 2030 UTC Schedule:-

3-Sept-20:- 5186 kHz, start time purely nominal, calling "891" when tuned in before 2029 UTC, DK/GC "876 876 42 42", weak but reasonably clear signal.

17-Sept-20:- 5186 kHz, call "891", DK/GC "410 410 41 41", weak but clear, ended before 2041 UTC.

1-Oct-20:- 5186 kHz, started after the half-hour, "891" and "273 273 44 44", weak signal.

15-Oct-20:- 5186 kHz, another late start, no voice heard until well after 2031z, "891" and "591 591 42 42", peaking S6-S7.

Friday 2130 UTC Schedule Following First + Third Thursdays:-

4-Sept-20:- 5191 kHz, I made it, not the expected 5197, calling "634", must have started well before the half-hour, DK/GC "876 876 42 42" before 2132 UTC. Reasonable signal, S6.

18-Sept-20:- 5197 kHz, very weak signal, not heard at all until approx 2135z emerging from the local noise QRM, clearer by 2138z, ended after 2141 with "410 41 41 00000", same as the previous day's 2030z sending.

2-Oct-20:- 5197 kHz, weak signal, had started when tuned in just before the half-hour, heard call "634", sank into the local QRM and became unreadable.

E07

PoSW's logs and analysis to open:

Sunday + Wednesday Schedule, 1700 UTC Start:-

2-Sept-20, Wednesday:- 1700 UTC, 12139 kHz, "161 161 161 000", weak signal.

1720 UTC, 10639 kHz, also weak.

6-Sept-20, Sunday:- 1700 UTC, 12139 kHz, "161 161 161 000", strong.

1720 UTC, 10639 kHz, slightly weaker.

9-Sept-20, Wednesday:- 1700 UTC, 12139 kHz, "161 161 161 000", strong signal, missed second sending.

13-Sept-20, Sunday:- 1700 UTC, 12139 kHz, "161 161 161 000", well over S9.

1720 UTC, 10639 kHz, weaker.

20-Sept-20, Sunday:- 1700 UTC, 12139 kHz, strong signal and 1720 UTC, 10639 kHz, weaker, "161 161 161 000".

23-Sept-20, Wednesday:- 1700 UTC, 12139 kHz, "161 161 161 000", peaking around S8.

1720 UTC, 10639 kHz, a couple of S-points weaker.

27-Sept-20, Sunday:- 1700 UTC, 12139 kHz, "161 161 161 000", S9+, very strong signal.

1720 UTC, 10639 kHz, weaker.

30-Sept-20, Wednesday:- 1700 UTC, 12139 kHz, S9 and 1720 UTC, 10639 kHz, S7, "161 161 161 000".

Not much of a workload for this agent in the month of September, then. Somewhat unusual because this schedule has transmitted some very long messages over the past few years.

4-Oct-20, Sunday:- 1700 UTC, 11156 kHz, "120 120 120 000", weak signal, continuing the "no message" theme in October. 1720 UTC, 9356 kHz, also weak.

7-Oct-20, Wednesday:- 1700 UTC, 11156 kHz and 1720 UTC, 9356 kHz, both weak, "130 130 130 000".

11-Oct-20, Sunday:- 1700 UTC, 11156 kHz, "130 130 130 000", weak.

1720 UTC, 9356 kHz, stronger.

14-Oct-20, Wednesday:- 1700 UTC, 11156 kHz and 1720 UTC, 9356 kHz, both around S7, "130 130 130 000".

18-Oct-20, Sunday:- 1700 UTC, 11156 kHz, "130 130 130 000".

1720 UTC, 9356 kHz, also around S7.

Monday + Wednesday Schedule, 1900 UTC Start:-

2-Sept-20, Wednesday:- 1900 UTC, 14584 kHz, "535 535 535 000", peaking S7 with QSB.

1920 UTC, 13384 kHz, strong, well over S9.

7-Sept-20, Monday:- 1900 UTC, 14584 kHz, "535 535 535 1" for a full message, DK/GC "168 79" x 2, strong signal.

1920 UTC, 13384 kHz, also strong, over S9.

1940 UTC, 11584 kHz, S8.

9-Sept-20, Wednesday:- 1900 UTC, 14584 kHz, "535" and "168 79" again, strong.

1920 UTC, 13384 kHz, strong.

1940 UTC, 11584 kHz, very strong signal.

14-Sept-20, Monday:- 1900 UTC, 14584 kHz, "535 535 535 000", much weaker than so far this month.

1920 UTC, 13384 kHz, S4 at best.

16-Sept-20, Wednesday:- 1900 UTC, 14584 kHz and 1920 UTC, 13384 kHz, both very weak, only just detectable, could just hear the "000" of a "no message".

21-Sept-20, Monday:- 1900 UTC, 14584 kHz, full message, "535 535 535 1", DK/GC "407 87", weak but clear signal.

1920 UTC, 13384 kHz, weak.

1940 UTC, 11584 kHz, in contrast with the first two transmissions S9+, very strong signal.

23-Sept-20, Wednesday:- 1900 UTC, 14584 kHz, very weak, unreadable.

1920 UTC, 13384 kHz, much stronger, "535" and "407 87" again.

1940 UTC, 11584 kHz, third sending as usual by far the strongest, well over S9.

7-Oct-20, Wednesday:- 1900 UTC, 11539 kHz, "511 511 511 000", strong signal.

1920 UTC, 10139 kHz, also strong.

12-Oct-20, Monday:- 1900 UTC, 11539 kHz, full message, "511 511 511 1", DK/GC "444 68" x 2, strong, well over S9.

1920 UTC, 10139 kHz, S9 with QSB.

1940 UTC, 8139 kHz, peaking over S9.

14-Oct-20, Wednesday:- 1900 UTC, 11539 kHz, "511" and "444 68" again, S7 to S8.

1920 UTC, 10139 kHz, slightly weaker.

1940 UTC, 8139 kHz, very strong.

19-Oct-20, Monday:- 1900 UTC, 11539 kHz and 1920 UTC, 10139 kHz, both very strong, "511 511 511 000", back in the old routine.

Sunday Schedule, 0600 UTC Start:-

6-Sept-20:- 0600 UTC, 9261 kHz, "224 224 224 000", strong signal.

0620 UTC, 10261 kHz, also strong. Same frequencies as in August.

13-Sept-20:- 0600 UTC, 9261 kHz, "224 224 224 000", weak.

0620 UTC, 10261 kHz, stronger.

20-Sept-20:- 0600 UTC, 9261 kHz and 0620 UTC, 10261 kHz, both around S6, "224 224 224 000".

27-Sept-20:- 0600 UTC, 9261 kHz, "224 224 224 000", S4 at best.

0620 UTC, 10261 kHz, stronger, S8.

Unable to find this one on the first Sunday in October, the 4th.

11-Oct-20:- 0601 UTC, 10317 kHz, first sending found in progress, "312 312 312 000", weak, only just readable. Second sending most likely 11117 or 12117, but nothing heard.

18-Oct-20:- 0600 UTC, 10317 kHz, "312 312 312 000", S5 to S6.

0620 UTC, 11117 kHz, no problem with the second sending this morning, peaking S9.

25-Oct-20:- 0600 UTC, 10317 kHz, first morning after British Summer Time has ended, now on one hour earlier, 6 AM, but based on past years predicted to shift by one hour so as to show up at 7 AM in November. "312 312 312 000", strong signal. 0620 UTC, 11117 kHz, also strong.

Saturday Schedule, 1300 UTC Start:-

5-Sept-20:- 1300 UTC, 12176 kHz, "152 152 152 000", strong signal, well over S9.

1320 UTC, 11576 kHz, also over S9. Same frequencies as in the past several months.

12-Sept-20:- 1320 UTC, 11576 kHz, "152 152 152 000", over S9, missed 1300z sending.

10261kHz

11117kHz

19-Sept-20:- 1300 UTC, 12176 kHz and 1320 UTC, 11576 kHz, both around S7, "152 152 152 000".

3-Oct-20:- 1300 UTC, 12176 kHz, "152 152 152 000", peaking S8.

06207

0620z

1320 UTC, 11576 kHz, weaker. Continuing with the same frequencies in October.

17-Oct-20:- 1300 UTC, 12176 kHz, "152 152 152 000", S9+, very strong signal.

1320 UTC, 11576 kHz, also S9+.

9261kHz

10317kHz

PoSW's logs mirror the above reception; with anaysis:

Wednesday Schedule, 2000 UTC Start:-

2-Sept-20:- 2000 UTC, 8144 kHz, "197 197 197 000", very strong signal. 2020 UTC, 6944 kHz, weaker.

16-Sept-20:- 2000 UTC, 8144 kHz and 2020 UTC, 6944 kHz, both S9+ very strong signals, "197 197 197 000".

23-Sept-20:- 2000 UTC, 8144 kHz, strong, "197 197 197 000".

2020 UTC, 6944 kHz, even stronger.

30-Sept-20:- 2000 UTC, 8144 kHz, a "full message" for a change, "197 197 197 1 13026",

DK/GC "7330 87" x 2, strong enough but not the usual rock-crushing signal.

2020 UTC, 6944 kHz, over S9.

2040 UTC, 5744 kHz, slightly weaker.

7-Oct-20:- 2000 UTC, 8144 kHz and 2020 UTC, 6944 kHz, both strong, "197 197 000",

back in the old routine.

14-Oct-20:- 2000 UTC, 8144 kHz, "197 197 197 000", strong signal.

2020 UTC, 6944 kHz, also strong.

21-Oct-20:- 2000 UTC, 8144 kHz and 2020 UTC, 6944 kHz, both very strong, "197 197 000".

Friday Schedule, 1510 UTC Start:-

4-Sept-20:- 1510 UTC, 10583 kHz, a "full message", "531 531 531 1 10502", DK/GC "321 99" x 2, weak at first but stronger by 1514 UTC.

1530 UTC, 9383 kHz, stronger, peaking around S8.

1550 UTC, 8183 kHz, S7.

11-Sept-20:- 1510 UTC, 10585 kHz, "531 531 531 000", weak.

1530 UTC, 9383 kHz, stronger.

18-Sept-20:- 1510 UTC, 10583 kHz, S6 to S7 and 1530 UTC, 9383 kHz, S9, "531 531 531 000".

25-Sept-20:- 1510 UTC, 10583 kHz, S9+, very strong and 1530 UTC, 9383 kHz, slightly weaker, "531 531 531 000".

9-Oct-20:- 1510 UTC, 11424 kHz, "411 411 411 000", peaking over S9.

1530 UTC, 10124 kHz, also over S9.

16-Oct-20:- 1510 UTC, 11424 kHz, strong and 1530 UTC, 10124 kHz, weaker, "411 411 411 000".

23-Oct-20:- 1510 UTC, 11424 kHz and 1530 UTC, 10124 kHz, both very strong, "411 411 411 000".

30-Oct-20:- 1510 UTC, 11424 kHz, somewhat unusually a "full message", "411 411 411 1 14902", DK/GC "7554 97" x 2, strong signal.

1530 UTC, 10124 kHz, very strong.

1550 UTC, 8124 kHz, very strong.

Saturday Schedule, 0800 UTC Start:-

5-Sept-20:- 0800 UTC, 11153 kHz, "114 114 114 1 10502", full message, DK/GC "321 99",

x 2, same as the previous day's 1510z schedule, no surprise as observations over time has showed that the Saturday morning UK time E07a is always a repeat of the Friday afternoon sending.

0820 UTC, 12153 kHz and 0840 UTC, 13453 kHz, repeats, all three transmissions peaking around S8.

12-Sept-20:- 0800 UTC, 11153 kHz, "114 114 114 000", peaking S9.

```
0820 UTC, 12153 kHz, slightly weaker.
```

19-Sept-20:- 0800 UTC, 11153 kHz, S9, "114 114 114 000", missed second sending.

3-Oct-20:- 0800 UTC, 11484 kHz, "413 413 413 000", not too strong, S5 to S6.

0820 UTC, 12184 kHz, stronger, S9 or over.

10-Oct-20:- 0800 UTC, 11484 kHz and 0820 UTC 12184 kHz, both strong, "413 413 4000".

17-Oct-20:- 0800 UTC, 11484 kHz, "413 413 413 000", very strong signal.

0820 UTC, 12184 kHz, slightly weaker.

31-Oct-20:- As expected a repeat of the full message of the previous day:-

0800 UTC, 11484 kHz:- "413 413 413 1 14902", DK/GC "7554 97" x 2. Strong signal, well over S9.

0820 UTC, 12184 kHz, also strong.

0840 UTC, 13384 kHz, third sending, also strong.

G06 From PoSW:

Second + Fourth Thursdays in the Month 1830 UTC Schedule:-

10-Sept-20:- 5935 kHz, very weak signal, not found until a bit before 1832 UTC, calling "579", sank into noise and became unreadable.

24-Sept-20:- 5936 kHz, calling "579", DK/GC "485 485 43 43", weak at first but became stronger.

8-Oct-20:- 5939 kHz, call "735 735 44 44", weak but clear.

Friday 1930 UTC Schedule Following Second + Fourth Thursdays:-

11-Sept-20:- 5442 kHz, had started when tuned in just after 1929z, calling "947", DK/GC "979 979 45 45", weak but reasonably clear signal.

25-Sept-20:- 5442 kHz, call "947", DK/GC "485 485 43 43", same as the previous day's 1830z, good signal.

9-Oct-20:- 5442 kHz, "947", DK/GC "735 735 44 44", as on 8-Oct. Strong signal.

Further logs and analysis from PoSW:

S06, O.M. Voice:-

First + Third Fridays in the Month Schedule, 1900 + 2000 UTC in September, 2000 + 2100 UTC in October:-

18-Sept-20:- 1900 UTC, 8175 kHz, "452 452 452 00000". Following the usual routine of using the similar frequencies in the autumn to those which had been used in the springtime months; Was logged on 8171 + 5876 in March / April. Just as well that 8171 was not used this evening because there was an S9+ "XJT" roaring away on that frequency.

2000 UTC, 5881 kHz, second sending, peaking over S9 with QSB.

2-Oct-20:- 2000 UTC, 8171 kHz, moved forward by an hour, "452 452 452 00000", good signal, no sign of "XJT". 2100 UTC, 5881 kHz, over S9 with QSB.

S06s, Y.L. Voice:-

Some of the stronger S06s transmissions heard in September and October:-

Monday 0830 + 0840 UTC Schedule, call "764":-

7-Sept-20:- 0830 UTC, 9220 kHz, weak signal, unreadable, better copy from the second sending:- 0840 UTC, 8270 kHz, DK/GC "251 251 8 8", longer than your average S06s message, "73687 04565 39895 91670 29257 69816 97314 15802".

21-Sept-20:- 0840 UTC, 8270 kHz, 0830z on 9220 too weak to copy, DK/GC "218 218 5 5", "04731 60677 77532 61912 06987".

5-Oct-20:- 0830 UTC, 9220 kHz, weak, just about readable, DK/GC "863 863 5 5", "62351 75019 41740 58692 65667". 0840 UTC, 8270 kHz, much stronger, S7 with QSB.

Tuesday 0730 + 0740 UTC Schedule, Call "427":-

8-Sept-20:- 0730 UTC, 7425 kHz, weak signal, became even weaker, unreadable.

0740 UTC, 11560 kHz, much stronger, DK/GC "831 831 5 5", "13680 60677 58159 74726 17761".

15-Sept-20:- 0740 UTC, 11560 kHz, 0730z on 7425 very weak, unreadable, DK/GC "809 809 5 5", "69856 82571 98423 79033 15425". Strength S7.

22-Sept-20:- 0730 UTC, 7425 kHz, unusually very strong signal, peaking well over S9, same message as on the 15th.

0740 UTC, 11560 kHz, second sending, very strong S9+, Propagation really good this morning.

Wednesday 0730 + 0740 UTC Schedule, Call "172":-

9-Sept-20:- 0730 UTC, 11530 kHz, broadcast station on the same frequency, S06s winning most of the time, DK/GC "930 930 5 5", "10059 60969 44343 04910 80187".

0740 UTC, 12140 kHz, strong signal on a clear frequency.

16-Sept-20:- 0730 UTC, 11530 kHz, the broadcast station flattening S06s this morning, difficult copy. 0740 UTC, 12140 kHz, much better, DK/GC "480 480 5 5", "42676 03733 96319 20647 40419".

23-Sept-20:- 0740 UTC, 12140 kHz, missed 0730z sending, same message as on the 16th, very strong signal.

7-Oct-20:- 0730 UTC, 11530 kHz, DK/GC "894 894 5 5", competing with the broadcast station, "91943 58456 74439 59317 44671". 0740 UTC, 12140 kHz, strong signal, sounded somewhat distorted in AM mode, OK in USB, switching to LSB was still readable the lower side-band not fully suppressed as is usually the case with S06s.

Friday 0830 + 0840 UTC Schedule, Call "156":-

4-Sept-20:- 0830 UTC, 12140 kHz, DK/GC "243 243 7 7", peaking around S7, "49986 25423 65208 00411 60167 85550 09019". 0840 UTC, 13515 kHz, second sending, very weak, unreadable.

18-Sept-20:- 0830 UTC - actually closer to 0831 by my watch, late start, DK/GC "940 940 7 7", very strong signal, "97419 87239 73458 63387 66676 90057 66740".

0841 UTC, 13515 kHz, also a late start and also a very strong signal.

25-Sept-20:- 0830 UTC, 12140 kHz, same message as on the 18th, S9 with QSB. Was noted warming up with pre-transmission audio tone on this frequency somewhat earlier than the usual ten minutes or so at 0805 UTC.

0840 UTC, 13515 kHz, much weaker signal.

9-Oct-20:- 0830 UTC, 12140 kHz, DK/GC "289 289 7 7", weak, "24541 33941 56823 43884 85518 35628 05816". Noticed an error here, the 5F groups are spoken twice and group number five was "85518" and then "88518". 0840 UTC, 13515 kHz, stronger signal.

16-Oct-20:- 0830 UTC, 12140 kHz, DK/GC "240 240 7 7", S9+, very strong, "33796 13577 74525 46647 47097 53515 25616".

0840 UTC, 13515 kHz, started off over S9 but rapidly became weaker.

23-Oct-20:- 0830 UTC, 12140 kHz, "240 240 7 7" and 5Fs as on the 16th. Strong signal. 0840 UTC 13515 kHz, much weaker.

First Saturday in the Month 0800 + 0810 UTC Schedule, Call "132":-

5-Sept-20:- Very weak signals on the predicted frequencies of 10350 and 8520, both unreadable, a bit better in October:-

3-Oct-20:- 0800 UTC, 10350 kHz, weak signal, just about readable, DK/GC "407 407 5 5", "67553 24398 20119 20765 10852".

0810 UTC, 8520 kHz, slightly stronger, strong "XJT" churning away on the LF side removed by using the RX in USB mode.

Thanks PoSW and RNGB [and monitors]

Till next time I say good-bye, and please stay safe and healthy!

Jochen, the X06 Teamkopf [Thanks Jochen and crew]!

Thank you to all our contributors

Nothing to do over Christmas or Lockdown?

There's a wealth of films available on Netflix, Prime and all the rest of the outlets that have appeared available to us via the internet/satellite/cable/freeview TV.

This one caught my wife's eye and it's a belter. There's something to be said to being married to an Indian with the cross cultural appreciations etc:

Romeo Akbar Walter [don't miss the reference to RAW, India'a Research and Analysis Wing]

2h17m of pure espionage with background of the selected banker, his selection, training in defence, analysis and tradecraft.

You will see the quick thinking under duress, radio use [looks much like a Russian set complete with 35mm punch film for burst transmissions], interceptions, bugging, telephone intercept, a bit of torture and fooling lie detector --- Harry Palmer style distraction of bodily change – concealment of papers and so on. All set against the 1971 India/Pakistan/Bangladesh disagreement.

This is what the Global Security site has to say about RAW, well worth a read [visit the site]:

Research and Analysis Wing [RAW]

https://www.globalsecurity.org/intell/world/india/raw.htm

The Cabinet Secretariat Research and Analysis Wing [RAW], India's most powerful intelligence agency, is India's external intelligence agency. RAW has become an effective instrument of India's national power, and has assumed a significant role in formulating India's domestic and foreign policies. RAW has engaged in disinformation campaigns, espionage and sabotage against Pakistan and other neighboring countries. RAW has enjoyed the backing of successive Indian governments in these efforts. Working directly under the Prime Minister, the structure, rank, pay and perks of the Research & Analysis Wing are kept secret from Parliament.

Current policy debates in India have generally failed to focus on the relative priority given by RAW to activities directed against India's neighbors versus attention to domestic affairs to safeguard India's security and territorial integrity. The RAW has had limited success in dealing with separatist movements in Manipur and Tripura in the northeast, Tamil Nadu in the south, and Punjab and Kashmir in the northwestern part of the country. Indian sources allege the CIA has penetrated freedom fighters in Kashmir and started activities in Kerala, Karnataka, and other places, along with conducting economic and industrial espionage activities in New Delhi.

In 1968 India established this special branch of its intelligence service specifically targeted on Pakistan. The formation of RAW was based on the belief that Pakistan was supplying weapons to Sikh terrorists, and providing shelter and training to the guerrillas in Pakistan. Pakistan has accused the Research and Analysis Wing of sponsoring sabotage in Punjab, where RAW is alleged to have supported the Seraiki movement, providing financial support to promote its activities in Pakistan and organizing an International Seraiki Conference in Delhi in November-December 1993. RAW has an extensive network of agents and anti-government elements within Pakistan, including dissident elements from various sectarian and ethnic groups of Sindh and Punjab. Published reports allege that as many as 35,000 RAW agents have entered Pakistan between 1983-93, with 12,000 are working in Sindh, 10000 in Punjab 8000 in North West Frontier Province and 5000 in Balochistan. As many as 40 terrorist training camps at Rajasthan, East Punjab, Held Kashmir, Uttar Pradesh and other parts of India are run by the RAW's Special Service Bureau (SSB).

Throughout the Afghan War RAW was responsible for the planning and execution of terrorist activities in Pakistan to deter Pakistan from support of Afghan liberation movement against India's ally, the Soviet Union. The assistance provided to RAW by the KGB enabled RAW to arrange terrorist attacks in Pakistani cities throughout the Afghan War. The defeat of the Soviet Union in Afghanistan did not end the role of RAW in Pakistan, with reports that suggest that India has established a training camp in the town of Qadian, in East Punjab, where non-Muslim Pakistanis are trained for terrorist activities. Pakistani Prime Minister Nawaz Sharif has blamed India for funding the current upsurge of terrorism in Pakistan, and senior ministers have blamed the Research and Analysis Wing for the sectarian violence between Shias and Sunnis which has resulted in thousands of deaths every year.

The Government of Pakistan frequently assigns responsibility for terrorist activity to the Indian Government, even when no evidence can be verified. It is evidently in the interest of the Pakistani government to blame terrorist actions on external rather than internal sources, just as it would be in the interest of Indian services to obscure their hand in such actions. Terrorist activities in Pakistan attributed to the clandestine activities of Indian and Afghan intelligence agencies include:

A car bomb explosion in Saddar area of Peshawar on 21 December 1995 caused the deaths of 37 persons and injured over 50 others.

An explosion at Shaukat Khanum Hospital on 14 April 1996, claimed the lives of seven persons and injured to over 34 others.

A bus traveling from Lahore to Sahiwal was blown up at Bhai Pheru on 28 April 1996, causing the deaths of 44 persons on the spot and injuring 30 others.

An explosion in a bus near the Sheikhupura hospital killed 9 persons and injured 29 others on 08 May 1996.

An explosion near Alam chowk, Gujranwala on 10 June 1996 killed 3 persons and injured 11 others.

A bomb exploded on a bus on GT Road near Kharian on 10 June 1996, killing 2 persons and injuring 10 others.

On 27 June 1996, an explosion opposite Madrassah Faizul Islam, Faizabad, Rawalpindi, killed 5 persons and injured over 50 others.

A bomb explosion in the Faisalabad railway station passenger lounge on 08 July 1996 killed 3 persons and injured 20 others.

RAW has responded to Pakistani arms and training for Muslim militants in the disputed region of Kashmir state. RAW allegedly executed a hijacking of an Indian Airliner to Lahore in 1971 which was attributed to the Kashmiris, to give a terrorist dimension to the Kashmiri national movement. However soon the extent of RAW's involvement was made public.

RAW has a long history of activity in Bangladesh, supporting both secular forces and the area's Hindu minority. The involvement of RAW in East Pakistan is said to date from the 1960s, when RAW promoted dissatisfaction against Pakistan in East Pakistan, including funding Mujibur Rahmanh's general election in 1970 and providing training and arming the Mukti Bahini.

During the course of its investigation the Jain Commission received testimony on the official Indian support to the various Sri Lankan Tamil armed groups in Tamil Nadu. From 1981, RAW and the Intelligence Bureau established a network of as many as 30 training bases for these groups in India. Centers were also established at the high-security military installation of Chakrata, near Dehra Dun, and in the Ramakrishna Puram area of New Delhi. This clandestine support to the Liberation Tigers of Tamil Eelam (LTTE), some of whom were on the payroll of RAW, was later suspended. Starting in late 1986 the Research and Analysis Wing focused surveillance on the LTTE which was expanding ties with Tamil Nadu separatist groups. Rajiv Gandhi sought to establish good relations with the LTTE, even after the Indian Peace Keeping Force [IPKF] experience in Sri Lanka. But the Indian intelligence community failed to accurately assess the character of the LTTE and its orientation India and its political leaders. The LTTE assassination of Rajiv Gandhi was apparently motivated by fears of a possible reinduction of the Indian Peace Keeping Force (IPKF) in Sri Lanka and a crackdown on the LTTE network in Tamil Nadu.

The RAW and the Ministry of External Affairs are provided Rs 25 crore annually as "discretionary grants" for foreign influence operations. These funds have supported organisations fighting Sikh and Kashmiri separatists in the UK, Canada and the US. An extensive network of Indian operatives is controlled by the Indian Embassy in Washington DC. The Indian embassy's covert activities are reported to include the infitration of US long distance telephone carriers by Indian operatives, with access to all kinds of information, to r blackmail relatives of US residents living in India. In 1996 an Indian diplomat was implicated in a scandal over illegal funding of political candidates in the US. Under US law foreign nationals are prohibited from contributing to federal elections. The US District Court in Baltimore sentenced Lalit H Gadhia, a naturalised US citizen of Indian origin, to three months imprisonment. Gadhia had confessed that he worked as a conduit between the Indian Embassy and various Indian-American organisations for funnelling campaign contributions to influence US lawmakers. Over \$46,000 from the Indian Embassy was distributed among 20 Congressional candidates. The source of the cash used by Gadhia was Devendra Singh, a RAW official assigned to the Indian Embassy in Washington. Illicit campaign money received in 1995 went to Democratic candidates including Sens. Charles S. Robb (D-Va.), Paul S. Sarbanes (D -Md.) and Reps. Benjamin L. Cardin (D-Md.) and Steny H. Hoyer (D-Md.).

Givvus a Job!

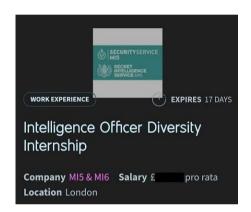

StB activity in Great Britain

By PLdn

The Czechoslovak StB [Statni Bezpecnost] was created in 1948 and efficiently managed long term agent operations amongst émigré families and actively recruited Czechoslovak expatriates.

One such expatriate was 42 year old RAF Sergeant Nicholas Prager who served in a technical capacity in the secretive BCDU, or Bomber Command Development Unit working on Project Blue Diver, the latest Electronic Counter Measures for Britain's nuclear deterrent; the V-Bomber Force.

Blue diver operated as a UHF Barrage Noise Jammer, actively jamming Soviet Radar systems ['TallKing'] and replaced the rapidly obsolescent Green Palm, a VHF Jammer.

Red Steer worked in the microwave X Band as a rearward looking radar for V Bombers and replaced 'Orange Putter' which was also known to have been fitted to RAF Canberras of 51 Squadron detailed for ELINT collection.

During his service from 1959 to 1961 Prager supplied photographs of wiring diagrams, circuitry and fittings from Blue Diver Manual Prager possessed expert electronic knowledge and well qualified for his dark dealings. For reasons best known to the RAF Prager was only NV'd or Normally Vetted. Such secret work usually requiring a much deeper vetting.

Although Prager passed these photographs to an Embassy official in Britain he visited Czechoslovakia, with his wife Jana, without notifying the RAF Provost. It is possible that Mrs Prager was also a spy. Prager had also worked on Red Steer at RAF Finningly.

Prager was arrested in 1970 and convicted in June 1971 of espionage, receiving 12 years gaol for his trouble. His rather apt code name was MARCONI.

The use of Czechoslovak expatriates as agents for the StB was not their only skill. Using contacts in Trade Union movements StB officers met, courted and recruited British Members of Parliament who they stated had 'succumbed to StB pressure' likely to be blackmail or financial rewards.

Known MPs linked to the StB were claimed as Tom Driberg, codename LEPAGE, Raymond Fletcher, codename PETER, Will Owen, codename LEE, Sir Barnett Stross, codename GUSTAV and John Stonehouse, codename unknown.

The then Prime Minister Harold Wilson [himself an unsuccessful target of the StB and prematurely codenamed OLDING] denied that John Stonehouse ever spied for the StB.

At the trial of Will Owen [LEE] in 1970 for passing secrets to the StB a secret witness [a StB officer and later defector] confirmed that of three MP contacts John Stonehouse had been one since 1962.

Stonehouse apparently passed technical details of aircraft to the Czechs; in some circles this was said to include those of Concorde of which the result was the somewhat technically challenged Russian Tupolev TU144 'Concordski' given the NATO coding 'CHARGER.'

One of the more cavalier operations planned by the Czechoslovak Secret Service, StB, was the entrapment of the prominent conservative MP Mr Edward Heath. Mr Heath was unmarried and a plan was constructed to lure Mr Heath to Czechoslovakia after a constructed meeting with a fellow musician who like Heath had a love of classic organ music. That StB musician was a Professor Reinberger. At a recital in London Mr Heath met the Professor and was offered the chance of a day playing the classical organ at the Church of St James in Prague.

Although Mr Heath accepted the offer it is thought that MI5 warned him not to attend since the Professor was believed to be bisexual and chosen specially for the meeting.

One further StB agent was arrested in Britain as late as April 1988 as he received a Morse message on a receiver in his North London apartment.

A true professional Erwin van Haarlem refused to reveal his real name, Vaclav Jelinek, and on conviction was given 10 years imprisonment. He was released in 1993 and returned to a very different Prague to the one he had left. The StB he had worked for so effectively had been dissolved and a new State controlled security bureau UOUD or Urad pro Ochranu Ustavy a Demokracie replaced it.

van Haarlem, according to misleading snippets from MI5, had come to the notice of the authorities due to interference to local TV reception from his transmitter as he sent Morse. However, that was not the case, van Haarlem never possessed a transmitter.

Erwin van Harlem was denounced by a defector. On December 1988 StB officer Vlastimil Ludvik left the Czech embassy in India and met with British intelligence representatives who took him to Britain where he claimed political asylum.

As is usual in such cases the claimant is debriefed. Ludvik passed details of Vaclav Jelinek otherwise Erwin van Haarlem.

Although Vlastimil Ludvik was the last StB officer to defect; there were several before him of which Frantisek August and Josef Frolik were prominent persons. It was Josef Frolik who with the assistance of a CIA agent in Turkey made his way to the United States via Incirlik Air Base. During his debrief he passed on details of the British politicians he was instrumental in 'recruiting' and of the plot to ensnare Edward Heath.

Worth a read methinks:

Secrets and spies: Behind the doors of the UK's most enigmatic government agency Over a century GCHQ has evolved from a codebreaker into a critical defence against the most advanced technological threats to national security. And while changes are afoot, some old habits die hard.

Monday, October 5, 2020 By Dominic Bliss Photographs By Jonny Pickup

https://www.nationalgeographic.co.uk/history-and-civilisation/2020/10/secrets-and-spies-behind-the-doors-of-the-uks-most-enigmatic/amp?

THEY CALL IT 'THE DOUGHNUT:' 180 metres in diameter, this massive circular building in Cheltenham houses GCHQ, the government's intelligence, cyber and security agency. It's here that some of the country's greatest hackers, technophiles and spooks ply their trade in espionage.

As you'd expect, media visits are rarer than hen's teeth. When National Geographic UK is invited, the security protocol is reassuringly stringent: a sort of Checkpoint Charlie in the Gloucestershire suburbs.

Once our ID has been checked at the main entrance, we drive at snail's pace through no less than three security gates before parking at the visitor's entrance. Here we undergo a body and bag x-ray search and are photographed for our security passes. Much more follows in the same spirit before we find ourselves inside the main building. It's enough to say even the craftiest of criminals couldn't sneak into this fortress.

And just as well, for GCHQ (Government Communications Headquarters) is the agency charged with keeping our nation safe. Employing around 10,000 people, it also includes the National Cyber Security Centre, based in London. Around half the employees work at the Doughnut in Cheltenham, the other half scattered at stations in London, Manchester, Bude (in Cornwall), Scarborough and RAF Menwith Hill (in North Yorkshire), RAF Digby (in Lincolnshire) and, it's widely rumoured – although the agency won't admit it – in various British Overseas Territories and foreign countries. "The sun never sets on GCHQ" is how one employee describes it.

The mission

On the agency website, director Jeremy Fleming explains the key functions: "We focus on communications: how to access, analyse and – occasionally – disrupt the communications of the UK's adversaries; and on the nation's cyber security."

He pinpoints what he calls the "mission areas". These are: preventing terrorist attacks, cyber security, thwarting serious and organised crime, supporting the armed forces, and something called strategic advantage - which includes "managing threats from hostile states, promoting the UK's prosperity and shaping the international environment".

But what does all this snooping around in the shadows actually achieve in the real world? Asked to provide details, the agency is understandably tight-lipped. They do, however, give the following examples: between 2018 and 2019 they helped foil 19 terrorist attacks, and prevented around £1.5 billion of tax evasion; they contributed to the arrest of sex offenders Matthew Falder and James Alexander; in 2018 they conducted a cyber campaign against ISIS, "hindering their ability to coordinate attacks, and protecting coalition forces on the battlefield"; in 2020 they exposed Russian attacks on the development of coronavirus vaccines.

Other crucial GCHQ work – as we discover when our tour starts with a briefing in the director's meeting room – includes protecting British citizens, businesses and institutions from cyber attack, and defending the nation from the at times provocative governments of Russia, China, Iran and North Korea, for example.

Our briefing comes from a long-serving stalwart of the agency; he's called Paul. For security reasons, all but a handful of employees here – such as the director – are known only by their first names.

Paul vehemently stresses how all intelligence gathering must be "legal, ethical, warranted and necessary". (American whistle-blower Edward Snowden, who exposed mass surveillance by GCHQ of private data and communications, might disagree with this.)

Paul says staff must agree to keep their identities very low profile. The few who have a social media presence, for example, might simply list themselves as "civil servants". But since the agency is one of the largest single employers in Gloucestershire, locals often know if their neighbours work at the Doughnut. As another employee explains: "Where we work isn't secret; what we do is."

Nevertheless, it was only in 1982, when the then prime minister Margaret Thatcher first mentioned GCHQ in parliament, that the agency's existence was officially acknowledged. Before then, the public impression of Britain's spying agencies was left to fiction writers like Ian Fleming, Graham Greene and John Le Carré.

Non-fiction writers weren't so tolerated. So cloak-and-dagger were the goings-on in Cheltenham that, in 1976 for example, when an American journalist wrote an exposé on the agency for Time Out magazine, he was subsequently deported as a threat to national security.

Out of the shadows

Times have changed since then, though. During the last decade GCHQ has emerged from the shadows and is now actively recruiting a more diverse workforce. Having its base in the very bourgeois environs of Cheltenham probably doesn't help. One of the reasons the agency recently opened a new station in Manchester was to attract employees from varied backgrounds, perhaps realising that a diversity of social class, race, language and neurodiversity can only help in the business of spying. It now has social media feeds, and publishes GCHQ-branded puzzles for the public.

That doesn't mean the agency has softened, though. From the director's meeting room, our tour moves to the 'Event Management Centre', where senior operations officer Caroline explains how staff work 24 hours a day, ready to coordinate a response to crises such as terrorist attacks or kidnappings.

Around the outside of the room there is a ring of eight clusters of desks, known as huts – a nod to the old days when code-breakers used to work in wooden huts at GCHQ's former home at Bletchley Park. Framed above these desks are ticker-tape screens blinking with the different time zones of the agency's allies around the world. ZULU is Greenwich Mean time; NSA is the US National Security Agency in Maryland; ASD is the Australian Signals Directorate in Canberra. There are also dozens of TV screens. Some feed through the main British TV channels, but for security reasons, others have been switched off before we enter the room.

The tour continues downstairs. The Doughnut comprises two concentric circular buildings, with a covered walkway in between known as The Street. It's a design that allows employees to move around the building as rapidly as possible, the idea being that no one is ever more than five minutes' brisk walk from another colleague's desk.

Lining The Street are all the facilities employees might need – a Greggs, Costa Coffee, Starbucks, a convenience store, a staff canteen – ensuring they can remain inside the security ring for entire shifts. Also here is a small museum housing infamous security items such as the Enigma machine which helped the British decipher German codes at Bletchley Park during World War II; and the Zimmermann Telegram, which proposed a military alliance between Germany and Mexico during World War I, and hastened USA's entry into the war after it was intercepted by the British.

(Read: The last voices of World War Two: Betty Webb, British Intelligence.)

In the very centre of GCHQ is an open-air garden which, according to our guide, is large enough to accommodate the Royal Albert Hall. There are a dozen or so deckchairs scattered across the lawn, a glass pod in which to sit when it's raining, and a smoking shelter. On the far side is a monument to the employees of GCHQ who have died in the line of duty, although we are not permitted to examine the names inscribed on it.

Only one member of staff's identity is offered up, and for the first time in his case: Dr David Abrutat, GCHQ's newly appointed historian. Along with the director Jeremy Fleming, he is one of just a handful of "avowed" employees, meaning he is legally permitted to reveal his face and full name to the public.

A former Royal Marine Commando and history writer, he was drawn to the job through his passion for military history. His role grants him access to all the agency's historical archives – even the top secret stuff the public will never find out about. "A treasure trove," is how he describes it. "For me it's like going into a sweet shop."

Some of the secrets stored by GCHQ are released to the public 30 years after they happen. But not all. "We are not obliged to release them," he confirms.

A history in artefacts

Sitting in his wheelchair – a consequence of a car accident 20 years ago – Abrutat proudly displays some of his less sensitive documents and objects. The oldest item in the archive is a Foreign Office parchment from 1809 which explains to overseas diplomats how to encipher their communications.

Dated 1915, there is a telegram from the British Admiralty to the Royal Navy, reporting on German U-boats in the vicinity of the British ocean liner RMS Lusitania, just hours before it was sunk – an atrocity that drew the United States' into World War I.

Lined with lead, a Royal Navy codebook from World War II feels strangely heavy in Abrutat's hand, he says. It was designed so that, should enemies board the ship, the captain could quickly drop it overboard to the bottom of the sea.

From a more modern conflict – the first Gulf War – there's an Iraqi radio receiver, its casing battered and worn away by desert sand.

The smallest item is a personal diary of the first head of GCHQ, Alastair Denniston. Abrutat points out the entry for December 8th 1941, where Denniston has written just one word in capital letters: 'JAPAN'. "That was the day after the Pearl Harbour attacks," he points out.

Finally there's a German Lorenz cipher machine which was captured in 1945 in occupied France and driven straight back to Bletchley Park. "These machines were used by German High Command and by Hitler," Abrutat says. "In the run-up to D-Day, Bletchley Park was really interested in the German communications between Paris and Berlin; everything that was going on in Normandy. It was an insight into what Hitler was thinking."

(Related: 75 years after World War Two ended, all sides agree - war is hell.)

Origins of an agency

GCHQ has existed for over a century now – plenty of time to accumulate many such documents and souvenirs from the world of espionage. The agency traces its origins back to November 1919 when, following the success of army signals intelligence during World War I, a new peacetime intelligence unit, called the Government Code & Cypher School, was established at Watergate House, in central London.

During World War II the organisation moved to Bletchley Park, in Buckinghamshire, changing its name to GCHQ. After a brief spell at Eastcote, in the London suburbs, operations relocated to Cheltenham in 1951. In 2003 GCHQ occupied its current home in The Doughnut.

Abrutat explains the value of history in educating the public about GCHQ's role in national security. Occasionally he and his staff offer tours of the museum to schoolchildren and VIPs. He's also collaborating with an author on an official history of the agency, due to be published in October 2020.

"It's all about selling us as an organisation, and recruiting the next generation of analysts, linguists and cyber ninjas," he says.

But history is also vital in educating today's new recruits. For that reason Abrutat documents previous GCHQ missions, in the hope that current employees might

learn vital lessons from them.

"We're not very good at learning lessons; most organisations aren't," he says. "But having a corporate record of why we made a [certain] decision in 1977 or 1984 – you can use that to educate future management and leadership; so as not to trip up again."

Intelligence and espionage are continually evolving. This, says Abrutat, is what keeps him and his colleagues at the Doughnut focussed on their missions.

Former CIA officer charged with selling secrets to China

by <u>Kiley Crossland</u> Posted 6/23/17, 12:21 pm

A former Central Intelligence Agency officer was arrested Thursday on charges he sold top-secret documents to China. Authorities arrested Kevin Mallory, 60, at his home in Leesburg, Va. Mallory, an Army veteran and former special agent who held top-secret security clearance until 2012, traveled to Shanghai in April. Customs agents interviewed him because he failed to declare \$16,500 in cash found in his two carry-on bags. During a May interview with the FBI, Mallory admitted he met with two people from a Chinese think tank and was given a communications device for transmitting documents. He said he only sent two unclassified documents, according to an affidavit. But FBI agents later found four classified documents on the device, including three with a top-secret classification. They also found messages between Mallory and the suspected Chinese agent, one in which Mallory wrote, "Your object is to gain information, and my object is to be paid." Mallory is charged under the federal Espionage Act and could face life in prison. If certain conditions are met, the charges could make Mallory eligible for the death penalty.

Tnx 'E'

Two French spies claim they were ordered to kill a woman hypnotherapist, 54

https://theworldnews.net/uk-news/two-french-spies-claim-they-were-ordered-to-kill-a-woman-hypnotherapist-54

They have been named by local media as Pierre B, 28, and Karl E, 25.

They told authorities that they had been following orders to kill the female psychotherapist who lives in Créteil, a small town on the outskirts of Paris.

French spies have claimed they were sent on an official mission to kill a small-town psychotherapist. Above, inside the General Directorate for External Security (DGSE) in Paris (File image)

According to a report in Le Parisien, the spies told investigators that they had been told to 'eliminate' the 54-year-old 'with firearms'.

The two men had spent the night parked outside the woman's house in a car with a fake license plate.

Their movements had attracted the attention of a neighbour, who reported that the two men had spent the night there.

#The spies told authorities that they had been following orders to kill the female psychotherapist who lives in Créteil, a small town on the outskirts of Pari

Police later raided the two men's rooms at a DGSE military training centre in Saran.

The men were arrested and the spy agency did not intervene on their behalf. Officials suspect that\

they were working on an unofficial contract with two private operators, Le Parisien reported.

The psychotherapist was shocked to discover she had been the target of the spies when informed by police.

The motive for the crime remains unknown, with an investigator noting: 'We are in a Bermuda Triangle.

'There are a lot of unknowns.'

PoSW's Items of Interest in the Media

Like many other people, if comments seen on that inter-web thing are to be believed, I have just about given up on the mainstream media, especially since that BLM thing - Burn, Loot and Murder? became the chief concern of the metropolitan chattering classes earlier in the year. So no more listening to BBC radios 4 and 5 Live, essential companions until they decided to go full on with the whole "white people are responsible for every disaster which has befallen mankind throughout the history of the world and must pay compensation to the superior peoples of African origin" narrative, and that also goes for LBC 97.3, not listened for months, not even to the evening show presented by Iain Dale to whom I felt a certain degree of loyalty because he went to the same school as me.

Likewise, no money wasted in buying newspapers - except on one occasion, on the 7^{th} of October, when standing in the queue at the supermarket - two metre spacing, of course - I succumbed to temptation and reached over to the newspaper rack and picked up a copy of the I which contained a couple of items with connections to the espionage trade:- "Court limits surveillance on phone and internet data", is the headline over a piece by Leo Cendrowicz, reporting from Brussels, which says, "The European Union's top court has ruled that security agencies cannot have unlimited access to phone and internet user data, in a ruling that could curb the powers of spies to snoop on suspects.

The Luxembourg based European Court of Justice ruled that unrestrained mass surveillance of personal data was unlawful, in a victory for British, French and Belgian privacy rights groups that brought the case.

It said the general retention of such data could only be allowed when governments faced a 'serious threat to national security that proves to be genuine and present or foreseeable'.

Law enforcement agencies have long tried to balance fighting crime and terrorism with respecting the right to data privacy."

The second story from the same paper informs us that Britain is up there with the best of them when it comes to providing governments around the world with the means to snoop on their citizens. "Security boom - Demand for surveillance tech" is the headline over a short item written by Cahal Milmo which says, "British security firms experienced a boom last year in demand from abroad for products from cyber defence tools to surveillance

technology. Exports in the sector grew by nearly 40 per cent to £7.2bn in 2019, with cyber security services accounting for the bulk of the sales at nearly 4bn.

A significant part of the rise in security sales was due to the registration of UK subsidiaries of major American companies with a 44 per cent year-on-year increase in British companies in the sector.

The figure, produced by the Department for International Trade, place Britain in third place in the international league of security exporters behind America and China.

British exporters specialising in screening and detection equipment, such as airport security, registered sales of more than £1bn.

Another security scare involving a civilian airliner on its way to Stansted Airport, and like all the others in recent times, another case of "much ado about nothing" - it's like deja vu all over again. "Fighter jets escort flight into Stansted Airport after latest potential security incident" is the headline over an item in one of our local free papers, the Saffron Walden Reporter of 3-September, written by Mark Langford and Louise Dunderdale which goes on to say, "RAF fighter jets were scrambled to escort a Ryanair flight into Stansted Airport after a potential security incident on board a flight on Sunday, the latest in a line of incidents involving security alerts and planes in just a few months.

On Sunday, the captain raised the alarm after a mobile phone was found in the toilet.

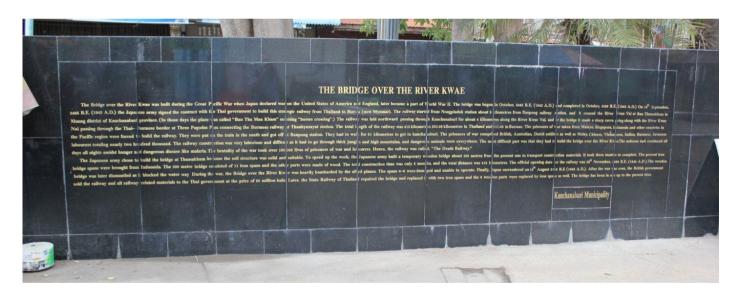

Two men, a 34-year-old man from Kuwait and a 48-year-old man from Italy were questioned by counter-terrorism police after the Vienna to Stansted flight landed at 7pm on Sunday.

A spokesman for the Eastern Region Special Operations Unit (ERSOU) said: 'After examination by specialist investigators, the object was found not to be of concern. Officers spoke with the two men and neither were considered to have committed any offences.'

Ryanair said the captain had followed standard protocol in raising the alarm.

Point to ponder:- "The Lunatics Have Taken Over the Asylum", title of a song recorded by Fun Boy Three in 1981, but also a comment on this country and the world in general.

Image of Plaque erected at site of the 'Bridge over the River Kwae' where allied prisoners of war were used as slave labour by Imperial Japanese Forces

Plaque erected by the Kanchanaburi Municipality of Thailand in Remembrance of those souls who perished and whose remains are interred in the War Graves nearby
