ENIGMA 2000 NEWSLETTER

An interesting view of a Number Station Enthusiast's antennae.

The trapped vertical antenna to the left performs well across HF

Issue 44 January 2008

http://groups.yahoo.com/group/enigma2000

Welcome all to 2008, and Issue 44, we hope you have had a pleasant Festive Season and are looking forward to the mysteries and surprises of the coming year – there's bound to be some.

The "management" takes this opportunity to apologise for not being able to organise another New Station as in Issue 38 – it was not for the want of trying ©

To make up for this we include a couple of pretty topical piccys from JoeG in Canada, who was also miffed at not catching something special to end the year, bless 'im.

The first shews exactly how cold it is, the second an aurora:

The expected "restive element" of Christmas somehow eluded us at Enigma Towers where Paul suffered a small hiccup, or rather a full blown problem, with a PC failure wherein was contained over 60% of this newsletter. [And now his radio dedicated PC has also collapsed causing Paul to use his antiquated auto system].

At the same time Mike L was informed by his "employer" on Dec 21st that as from Jan 6th a totally new operating procedure was being introduced.

Updated training notes were required to be written and key staff familiarised – of course many of the needed background documents only arrived on 1st Jan. Ho Hum.

Of the 24hrs in a day we've managed to work 25 of them for the last week, and we're only a couple of days past our ideal deadline in publishing.

In Issue 38 we made reference to our desire to standardise the various non-log inputs to E2k.

This has worked out very well in practice and made assembling the Newsletter a lot easier, thanks to all who co-operated and without whose efforts the Newsletter would be a poorer document.

It also partnered very nicely with another of our previously stated aims to increase the Chart Based content, which we are delighted with.

Enjoy our offerings Paul & Mike L

Newsletter 43 Cryptic Snippet, the ongoing saga.

A few members posted their considered ideas while others did some deeper investigation into recently published "non mainstream" info and supplied us with the details.

We still have no definitive answers, neither has the target (if there was one) yet been confirmed, but our back-channel sources lead us to believe some comments were not a million miles off target.

CooEe, I'm over here, want to play !!, digitally of course.

[Those who operate professionally with smoke and mirrors know what fog looks like] Ed.

The quick roundup

E10 more slot behaviour changes arrived, see entry

V21 (The Babbler) puts in appearances again

M01, something very strange going on here, see entry & comments.

M03/G11 still swapping some skeds.

M08/V2's Marks updated charts keep us in the picture.

M12, New skeds & IDs, see Brians Charts for details.

SK01 moves around, is it looking for a home?

Morse Stations

Freqs are generally +-1k

Here is a representative sample of the logs received, giving an indication of station behaviour and the range of times/freqs heard. These need to be read in conjunction with any other associated articles/charts/comments in this issue.

M01/1 XIV MCW, hand, short. (197 sked from 1st Nov – 29th Feb 08) IS IT STILL THERE?

Whatever it is that's going on with this station E2k has never come across such strange circumstances before.

There have been no confirmed loggings for November/December when the M01/1 "197" sked set should be in use (possibly no M01s logged since Tue 23 Oct) despite active searching by RNGB / Fritz N / Mike L, who keep tabs on this one.

However RNGB snagged this single "PSEUDO M01/1" (for want of a better descriptor) **dual message** TX, which was completely outside any previously known behaviour/freq/time/sked!!!!!

```
7676 09.05z 19 Nov (Mon) i/p '195' 861 40 = 71305 90226 ..... = = 861 861 40 40 '195' R2, 302 40 = 38735 ...... = = 000
```

HFD also sent in a comment that he had not heard the 197's since Oct, and he's been logging it since 1995.

<u>SK01</u> XVIII (PSK31, PSK125, BPSK220, RDFT, HamDRM etc)
This classification was introduced as a "Generic" to cater for the current proliferation of "amateur" modes emanating from Cuba.

Exactly what is happening with these modes remains a bit elusive. Our monitors studying the transmissions believe that they are still at an experimental stage in terms of the freqs/mode/structure and that the message contents are not yet of an "operational" nature. The decoding software being used is commonly available Amateur Radio progs for MS Windows.

GERMAN BRANCH REPORT

German Branch report

Historical and new numbers stations - The report from E2K's German Branch (E2Kde) and the X06 team

Hallo liebe Freunde und Kollegen der deutschen Branche und des X06 Teams von E2K (Hello dear friends and colleagues of E2K's German Branch and the X06 team)

2007 is at ist end, and in the last 2 months of the old year we have again something from Germany's scene – this time from "Kopf" himself – and of course the X06 logs at the end.

An amount of Kopf's historical numbers stations on Simon Mason's site

2007 was the year of the 2nd edition of Simon Mason's numbers competition. For this one, Kopf has sent in a C-120 cassette full of old numbers stations from 1980-1990. It's containing G16, S05/15 (OLX) and some E10 variant string transmissions. All of them bring only ID versions, not numbers messages. There you can also find an overview about the stations and something about their recording history. You can find the stations at:

www.simonmason.karoo.net/jochenkopf.htm

X06 Mazielka (1C) logs section

A lot of nice stuff again. Thanks to all of our members, who shared their logs with us in the last year. Hopefully we are cooperating in the same good way in 2008, and I am convinced we will do!

With the best wishes to all of you for 2008 I say "Auf Wiedersehen" and "Good-bye"

Jochen Schäfer, KopfE2Kde and X06 Teamkopf [Thanks Jochen, really good stuff]

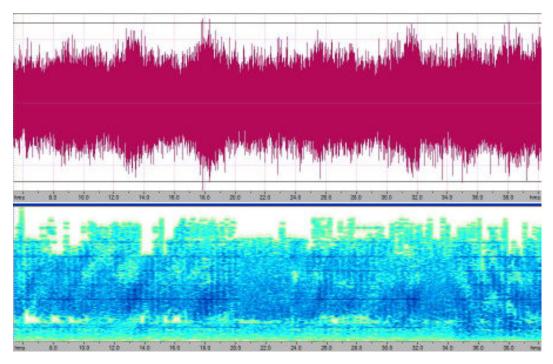

NON-NUMBER STATION RADIO NEWS from the pen of PoSW:

Ghostly CW? I happened to tune across the RF no-man's land between the low frequency end of the medium wave broadcast band and the aeronautical Non Directional Beacons on the evening of Monday 12-November and was surprised to find several different CW stations tapping away on 500 kHz, the one-time coastal Morse calling and distress frequency. My first thought was that I was receiving shipping CW from the past through a time warp but it became clear that they were amateur stations with CQ calls. The strongest was a G3 who finished his CQ with "QSX 3533 / 7033" so I guess he was inviting replies on these 80 and 40 metre frequencies from stations not equiped for 500. I am sure I read in one of the magazines a while back that there was a possibility of amateur activity on 500 kHz but I hadn't realised that it had been approved. Was probably an item on the GB2RS News which I have got out of the habit of listening to just lately. [Thanks Peter]

OPERATIONAL UNID

Doug (US) wrote > "Yesterday (Saturday 08/12) at around 0446 UTC I heard an odd signal on several frequencies between 7164 and 7181, but it seemed to be present predominantly on 7179. The signal would go on for only a few seconds, I'd say 10 to 15, and then abruptly cease. A quick turn of the VFO would find the signal at a different freq., with the the same MO.

Specifically, here are the frequencies that were active: 7164, 7171,7174, 7176, 7179, and 7181. Mode was USB but LSB worked as well. I have attached a one minute long sound sample, in WAV format."

This sample shews Doug's sample as signal vs spectro. In the lower plot the vertical 'bars' seem to correspond to the 'hooting.'

In answer Mr DX'er offered, "I reckon what you are hearing here is a jammer by the Ethiopean authorities on the freq. of Eritrea in Amharic:

7180 Voice of Broad Masses 2 0430-0530 1234567 Amharic they have been Jamming most of the Amharic transmission for the last few weeks.and of course

all know how heated is the situation between these 2 countries.

Eritrea is playing is cool changing the freq of 7180 every few minutes, so the Jammer is really following it all over that range of freq. [Tnx Doug and Mr DX'er]

Voice Stations

E03/E03a [X]

Apart from the regulations concerning the reception of wireless stations within Great Britain advice on reporting intelligence matters exists in the form of DA notices.

Whoever the messages, from E03/E03a are aimed at ENIGMA 2000 has no wish to 'advertise' the existence of these stations to those who may not support the best interests of Great Britain, or her representatives abroad. Although we are unable to stop discussion of these two stations on our Group site ENIGMA 2000 will remain aloof from any such discussion and will not be including reports or analysis of E03/E03a in our newsletters.

E06 [IA]

PoSW writes, "E06 Engish Man transmissions known to be operating in the UK evening time include the following:-

Sunday 1830 + 1930 UTC Schedule, call is always "690":-

28-Oct-07:- 1830 UTC, 6,990 kHz, calling "690" for a full message transmission, DK/GC "782 782 151 151", sideband splash interference from very strong broadcast station on 6,985 kHz.

1930 UTC, 5,440 kHz, second sending. With the end of summertime has, as expected, stayed on UTC and so now appears one hour earlier local time.

29-Oct-07, Monday:- 1830 UTC, 6,980 kHz, the "next day repeat" of yesterday's full message, 10 kHz lower in frequency. Second sending 1930 UTC, 5,440 kHz.

4-Nov-07:- 1830 UTC, 5,760 kHz, change of frequencies for November, call "690", again a full message, DK/GC "583 583 177 177". 1930 UTC, 4,585 kHz, second sending. Same frequencies, give or take 5kHz, used in November last year.

5-Nov-07, Monday:- 1830 UTC, 5,760 kHz, first sending of the next day repeat of yesterdays message, second sending 1930 UTC, 4,590 kHz. 11-Nov-07:- 1830 UTC, 5,760 kHz and 1930 UTC, 4,580 kHz, "690 690 690 00000".

18-Nov-07:- 1830 UTC, 5,760 kHz and 1930 UTC, 4,580 kHz, "690 690 690 00000".

2-Dec-07:- 1830 UTC, 5,785 kHz, change of frequency for December, same frequency used in this month in 2006, calling "690" for a full message, DK/GC "248 248 105 105".

1930 UTC, 4,515 kHz, second sending, also same frequency as in December last year.

3-Dec-07, Monday:- 1844 UTC, 5,785 kHz, "next day repeat" of yesterday's full message in progress. 1930 UTC, 4,515 kHz, second sending of "690" and "248 248 105 105".

9-Dec-07:- 1830 UTC, 5,785 kHz, "690 690 690 00000". Repeated 1930 UTC, 4,515 kHz; and an "XJT" on a close frequency started up within a second of E06.

16-Dec-07:- 1830 UTC, 5,785 kHz and 1930 UTC, 4,515 kHz, both strong signals, "690 690 690 00000".

First + Third Thursdays in the Month 2030 UTC Schedule:-

1-Nov-07:- Started 35 seconds, late start!, 4,836 kHz, calling "231", DK/GC "287 287 30 30". Was on 5,186 kHz in October, logged on 4,836 in November last year.

15-Nov-07:- 4,836 kHz, started approx 25 seconds <u>early</u> this evening. "321" and "287 287 30 30", as on 1-Nov. Very strong signal this evening, S9+. Carrier was up when checked 2001z, voice called "1-2-3-4-5-6" over and over until just before 2015z.

6-Dec-07:- 4,836 kHz, started early again, about 45 seconds before the half hour, calling "321", DK/GC "153 153 21 21", strong signal, S9+.

Friday 2130 UTC Schedule:- usually comes up with the same 5F message as on the previous day but with a different call; I say "usually" because on on or two occasions in the not too distant past came up with a message different to that transmitted on the preceding Thursday, probably an error on someone's part.

2-Nov-07:- 2136 UTC, 4,760 kHz, transmission in progress, missed the start, is on one hour earlier now that summertime has ended, will take a while to get used to! Ended just after 2140z with DK/GC "287 287 30 30" - same as yesterday's 2030z transmission - and 5 slow "zero". 4,760 used in November last year.

16-Nov-07:- 4,760 kHz, started 25 seconds before the half hour - as did yesterday's 2030z sending, someone's clock is running fast! - call "472", DK/GC "287 30 30".

7-Dec-07:- 4,760 kHz, call "472", DK/GC "153 153 21 21", same 5F message as yesterday's 2030z sending. S9 signal and, as is often the case with this one and also the related Friday G06, the carrier was warming up the frequency well before start-up time, was up when checked at 2057z

Tuesday 2000 + 2100 UTC Schedule:-

13-Nov-07:- 2100 UTC, 5,290 kHz, "813 813 813 00000", this schedule shown in E2K S06 and E06 Regular Skeds chart, first sending should be 2000z, 6,865 kHz, second + fourth weeks in the month.

11-Dec-07:- 2100 UTC, 5,165 kHz, "652 652 652 00000", signal strength S7 to S8, lower sideband well suppressed.

Other E06:-

15-Nov-07, Thursday:- 1508 UTC, 9,090 kHz, transmission in progress, signal strength peaking S9 with deep QSB. Went on until just after 1548z, ended with "854 854 265 265 00000". This is the highest group count I have logged from any station in the IA family for some time. 1600 UTC, 7,830 kHz, call "309", DK/GC "854 854 265 265", repeat of the transmission heard earlier. Very strong signal, S9+, lower sideband well suppressed. Reference to the E2K Regular Skeds chart suggests this is the "next day repeat" of a Wednesday schedule." [Thanks PoSW]

<u>E07</u> [IB]

E07 continues in the UK evening time with the usual schedules, i.e. Sunday + Wednesday starting at 1800z UTC Monday + Wednesday starting at 2100 UTC and Thursday starting at 2110 UTC. All are using the same frequencies as in the same month last year including the Thursday schedule which was not using last year's frequencies and had to be searched for at the start of each month - until 1-November -07 when it showed up on the same frequencies as in November 2006 and so fell into line with the others. The long-standing problem with low levels of audio persists with E07, many sendings in recent weeks seemingly consisting of just a plain carrier with no modulation at all unless one strains one's hearing to the utmost. It is difficult to imagine what the point is of going to all the trouble of firing up the transmitter if the intended recipient can't hear the message.

Sunday + Wednesday Schedule:-

 $4\text{-Nov-07, Sunday:-}\ 1800\ UTC,\ 8,183\ kHz,\ "199\ 199\ 1",\ DK/GC\ "1239\ 81"\ x\ 2,\ reasonable\ mod.$

1820 UTC, 6,982 kHz, second sending, almost unreadable due to strong broadcast station on 6,985.

1840 UTC, 5,938 kHz, third sending, again difficult to copy inside 49 metre band. These frequencies used in November last year.

7-Nov-07, Wednesday:- 1807 UTC, 8,183 kHz, first sending in progress, strong carrier, mod. readable, ended with "000 000" 1810 and 45 seconds UTC.

1820 UTC, 6,982 kHz, second sending, largely unreadable due to broadcaster on 6,985 but E07 voice heard when the BC station went quiet for a few seconds just before the half hour.

1840 UTC, 5,938 kHz, third sending unreadable due to BC QRM.

18-Nov-07, Sunday:- 1800 UTC, 8,183 kHz, "199 199 199 000", mod low but readable second sending inaudible for the usual reason!

2-Dec-07, Sunday:- 1820 UTC, 5,836 kHz, should be the second sending of this schedule; was on 6,982 + 5,836 + 4,938 kHz in December last year. Some kind of transmision here, no voice heard and severe broadcast interference. Carrier went off after 1822z, so must be two minutes worth of "000" - no message.

Monday + Wednesday Schedule:-

7-Nov-07, Wednesday:- 2100 UTC, 6,931 kHz, first sending, frequencies for this schedule in November last year were 6,931 + 5,928 + 4,894 kHz, voice heard very, very faintly, unreadable, carrier went off 2102 and 25 seconds UTC so can only be two minutes of "000" - "no message".

2120 UTC, 5,928 kHz, second sending, no voice heard at all here, carrier QRT 2122.25s UTC, no third sending with a "no message"

14-Nov-07, Wednesday:- 2100 UTC, 6,931 kHz, "998 998 998 1", very low mod, unable to hear the DK/GC. I hope agent 998 had better luck! 2120 UTC, 5,928 kHz, second sending, unable to hear the voice at all. Forgot to check third sending of this full message!

19-Nov-07, Monday: 2100 UTC, 6,931 kHz, "998 998 998 1", DK/GC "184 49", at last, a readable transmission from this schedule, although still somewhat low mod. level.

2120 UTC, 5,928 kHz, second sending - and readable!

2140 UTC, 4,894 kHz, "998" and "184 49" for the third time; and this was a strong signal with good modulation, by far the best sending of this schedule for a while.

3-Dec-07, Monday:- 2100 UTC, 6,892 kHz, "887 887 887 000", strong signal with better than usual mod, over-riding an "XJT" on close frequency. New frequencies for a new month, in December last year was on 6,892 + 5,896 and in event of a full message, 4,792 kHz.

2120 UTC, 5,896 kHz, second sending on the expected frequency, reasonable mod. and coping well with sideband splash from a broadcast station. 5-Dec-07, Wednesday:- 2100 UTC, 6,892 kHz, no voice heard, carrier vanished after 2102z. 2120 UTC, 5,896 kHz, second sending, very low mod, only just readable, "887 887 887 000".

Thursday Schedule:-

1-Nov-07:- 2110 UTC, 6,777 kHz, "744 744 744 1", DK unreadable, Group Count "42", that low mod. again, pretty much unreadable.

2130 UTC, 5,449 kHz, "744", second sending with better mod. than the first, DK/GC "216 42" x 2. Chatter from RAF VOLMET SSB YL voice on 5,450 kHz.

2154 UTC, 4,483 kHz, third sending in progress, mod. low but readable. This Thursday schedule, as of this month, is now using the same frequencies in the same month last year having caught up with itself, so to speak.

8-Nov-07:- 2110 UTC, 6,777 kHz, "744" and "216 42", same as last week, repeated 2130 UTC, 5,449 kHz and 2150 UTC, 4,483 kHz.

15-Nov-07:- 2110 UTC, 6,777 kHz, first sending, very low mod., unreadable.

2130 UTC, 5,449 kHz, call "744" but unable to hear anything else.

2150 UTC, 4,483 kHz, third sending, best sending of the three although still with very low mod., DK/GC "216 42".....again. 22-Nov-07:- 2110 UTC, 6,777 kHz, "744 744 744 000", very low mod., only just audible towards the end of the two-minute transmission.

2130 UTC, 5,449 kHz, second sending, better mod. than the first, sideband chatter from RAF VOLMET.

6-Dec-07:- 2110 UTC, 6,777 kHz, very low mod., could just make out, "zero zero".

2130 UTC, 2130 UTC, 5,449 kHz, slightly better mod. than the first sending, at least it was readable, "744 744 744 000". Same frequencies as in November just gone and as in December last year. [Tnx PoSW].

This month sees a slight change to the format of the monthly E10 desk report by the desk apprentice. All the information that was there before is still there but I have changed some it into tables to try and tidy things up. I hope that all the regular readers like it.

Noteworthy Events

On the first of the month Quirino Tirelli monitored the 1900hrs PCD slot on 4270 KHz. There seems to have been some kind of a fault as the computerised female voice sounded as though she had a sore throat. Possibly this was due to a fault on the line between the studio or Intelligence HQ and the remote transmitter site

On the 19th Richard Ness heard ABC on 6428 KHz at 2024hrs then on the 28th he heard HNC-Z on 6575 KHz at 1758 hrs.

From the 22nd of the month until the 29th of the month E10 Agent logged 7 new E10 messages with various callsigns but all messages were 11 groups long. These are all listed below ..

22 Nov YHF LLTBV IVWOT PVBPJ WOZLX COBJV YYJOS ZVEBF CPQQC ZLBDI JTGJB CLEAY
24 Nov ULX LEPIB HWCKZ DMLGZ AYERU HKCDA MJSZR PVTSB UGPCH BWDDG EREQI REGYL
24 Nov EZI MCDGJ OLHYK PLGPW BPJNP EDDAN LAQJT PJSET RZZCJ RPHQQ ICEST BTCRM
24 Nov YHF XSJPP LNLVI AYEES ORYDH QWHLU ZRMRQ UOAFH WHGUH WHKMG FCEGY NICTO
25 Nov EZI UQJAW FHGTQ XCNHQ AKFKL ORGYG JDYCV NTPHI DKTXL VDAJI QUVCQ CBWYS
26 Nov ULX WUUMR PXQAC RJTWO JUIDI DEKUH WYKUM BJTWA HPKKJ LOXWS USYWH WRGBX

These messages are also interesting because of the number of doubles they contain. A double is where the same letter of alphabet repeats itself. The positions of these repeats in groups 1, 7 and 8 contain more doubles than chance should allow (I have marked in the doubles in bold text). There has been speculation that this traffic is the same message (or with slight variations) encrypted with different keys.

E10 Desk Report for December 2007

Firstly a brief apology for the short length of this report but this month the apprentice E10 desk has moved QTH. As you can imagine this has caused considerable disruption to my monitoring activities however it does mean I will escape the local QRM issues that have plagued me for the last couple of years at my old QTH.

Noteworthy Events

On Sunday 9th Manolis monitored ABC on 6428 KHz at 1846hrs which then became ABC2 at 1848hrs. Then on Thursday 18th at 1802 Richard Ness heard the unusual call YHF3 on 3840 KHz. ABC then made another appearance on Sunday 23rd being heard by Mr DXer from 1321 until 1444 again this was on 6428 KHz.

Finally on Christmas Day Mr DXer heard HNCS on 6575 KHz from 1437 until it suddenly ended at 1440.

Thanks Ian - excellent copy!

E11 [III] H-FD's updated charts can be seen in the charts section, along with RNGB's charts. Thanks each.

November 2007

The month started very busily with some new frequencies and some IDs moving into different time slots. The daily E11 transmissions at 0840/0915/1630 appear to have ended.

1D 284 is now only heard on Mondays and Wednesdays. Same for ID 287

The first sending of ID 284 was heard in CW (M03) on 5th November with 284/00, but by the 7th had changed back to E11.

831 25 00000

RNGB writes, "I still can't believe this is an actual message for anyone - it's just too amateurish.

The YL's pronunciation is terrible, no one could possibly write this down with any degree of accuracy.

The message continually broke down and was restarted on both frequencies."

FR 8180kHz 1440z 14/12[274 801/25] S8 mikesndbs

77557 24855 85652 91017 44643 801/25 00000

RNGB offers this info:

E17 can be heard on the following frequencies; - 5140 5454 6280 7635 8180 10240 kHz using the call '274'

E17z uses the following frequency pairs: -11170/9820 (Nov to Feb); 14260/12930 (March/April & Sept/Oct); May to Aug not found.

12350/10320 were also used during December 2006. Repeats are 10 minutes later. The call is '674' and follows the series of S06 (slow)

And offers his December logs:

PoSW also offers some analysis; Similar in format to E06. I had heard this one on Thursday 6 - September at 0800z with a very weak signal on 14,260 kHz with call "674" and a message of 5 groups. Heard again in November on a lower frequency:-

15-Nov-07, Thursday:- 0800 UTC, 11,170 kHz, calling "674", DK/GC "213 213 5 5", signal strength S7 but unusual pronunciation of the numbers making for difficult copy, made worse by local QRM from central heating spark ignition; "1" sounds like "vahn", "5" like "fahv". 5Fs copied as "40014 82565 89943 35641 18415", all "query". Ended 0805z with DKDK GCGC and 5 x slow "Zero". Heard on this frequency on several occasions during the winter months of late 2006 / early 2007.

0810 UTC, 9,820 kHz, second sending; now, I never did manage to find a second sending last winter but Gert's Excellent Prediction List showed it as being on 9,820 - and so it was! Much weaker than the first sending. Inside 31 metre band although no BC station actually on this frequency but sideband splash from S9++ broadcaster 5kHz lower down.

E23 [XI] Frequencies and Times. All SSB [From AnonUK]

Since December 2004 skeds have become erratic, and may not stick to correct weeks. Some voice transmissions have been heard in week 2 Week 1 Usually starts on the first Monday of the Month, but there have been variations to this. Times are not rigid, has been known to start as early as Hour + 52 [Tnx AnonUK].

E25 [O]

My best wishes for health and prosperity for everybody! And of course we all hope for more surprises from the numbers scene. Last year was truly exciting, thanks to the discovery of a second E25 frequency which gave us a wealth of logs. I thank all of you who contribute in my quest to understand E25. So far a lot is achieved, but as usual, questions are more than the answers. The last months of 2007 were full of the usual E25 oddities: Background chat, noises, late starts and musical sessions.

Some of the mistakes happened, the last two months or earlier, indicates that each 4-digit group is actually two groups of two figures. The operator occasionally reads a pair in reverse by mistake. Things that should never reach the airwaves like computer sounds, (e.g. Windows 98 "ding.wav") or background chats, occurred during a couple of transmissions.

Agent 880 changed slot in December 2007: Instead of ~1015z now is ~1115z. E25 broadcast schedule is not precise (as usual) but this appears to be a true slot shift. Time will tell if this shift is permanent.

Music-only transmissions logged on the usual frequencies, but also on 6170 kHz. Was that another mistake (since "7" is under "4" in a keypad) or a deliberate test? Also some pieces from a traditional play from the old Egyptian Popular Heritage describing the events of the birthday of Prophet Muhammad were heard in several occasions on 6140 kHz. [Thanks Mr. DXer]

Some AM transmissions began with a frequency error as much as 500 Hz but error got smaller as the transmitter warmed up (now I have a stable RX and I confirm it's not from my side!). Two transmissions (two different ops with different signal strengths) in the same frequency occurred again, delivering the same message nearly at the same time making copy impossible.

Only one YL transmission and a nice YL & OM combination logged. Only two Arabic messages logged on 9450 kHz, which had low traffic anyway. Polish Radio External Service causes QRM at 1300z - 1400z but usually E25 is stronger. Also a digital station on 9448 kHz (center frequency, FSK with 200 Hz shift and probably 50 symbols/sec) causes QRM in the LSB on 9450; a similar digital station sometimes appears near 6140 kHz. Does anyone have more info about these digital stations, especially the one causing trouble on 9450 kHz? The latter seems idle most of the time but is strong and annoying, affecting the reception of Polish Radio. And a different kind of QRM also noted: Operators' or other nearby mobile phone caused QRM during some transmissions and I'm almost sure it wasn't one of mine!

Logs at a glance:

<u>G06</u> [IA]

The G06 German language YL continues with her usual schedules, i.e. first Monday in the month 1900 + 2000 UTC, twice a month Thursday 1830 UTC with a repeat on the following day at 1930 UTC and first + third Saturdays in the month at 2200 UTC. As expected has stayed on UTC following the end of summertime and so shows up one hour earlier throughout the winter.

First Monday in the Month Schedule:-

5-Nov-07:- 1900 UTC, 5,415 kHz, "308 308 308 00000", same frequency used in November last year.

2000 UTC, 4,570 kHz, second sending, not too far away from the 4,585 kHz used in November last year. Perhaps moved down a bit to keep clear of the related E06 transmission which was on 4,590 kHz this evening, having started at 1930z and still in progress on the hour.

3-Dec-07:- 1900 UTC, 5,190 kHz, "308 308 308 00000". Signal strength S7 to S8, lower sideband well suppressed. 2000 UTC, 3,845 kHz, second sending, these frequencies used in December last year.

Thursday 1830 UTC Schedule:-

8-Nov-07:- 4,519 kHz, the expected seasonal frequency change, was inside the 49 metre broadcast band in the region of 5,930 kHz with consequent interference in September and October. Started approx. 25 seconds after the half hour, call "271", DK/GC "835 835 23 23". Good signal peaking S9 with lower sideband well suppressed as always.

22-Nov-07:- 4,519 kHz, started early this evening by about 30 seconds. "271" and "835 835 23 23", as on the 8th.

13-Dec-07:- 4,519 kHz, call "271", DK/GC "514 514 25 25".

Friday 1930 UTC Schedule:-

9-Nov-07:- 4,792 kHz, changed from 5,442 kHz used in October - and it should also have been on this frequency in September but nothing heard! Call "436", DK/GC as yesterday's 1830z sending, "835 835 23 23".
23-Nov-07:- 4,792 kHz, "436" and "835 835 23 23".

14-Dec-07:- 4,792 kHz, started approx. 25 seconds before the half hour, call "436", DK/GC same as yesterday's 1830z, "514 514 25 25".

Saturday 2200 UTC Schedule:-

3-Nov-07:- 4,441 kHz, same frequency as in October, "843 843 00000", as always with this one; not heard a "full message" yet! Now winter is upon us appears at 10 PM on a Saturday night in the UK instead of 11 PM in the summer months. S9 signal, parked a receiver on 4,441 and saw the carrier come up just after 2136z, tone at 2147z and a single "Acht vier drei" about a minute afterwards, the usual pre-transmission warm-up routine.

17-Nov-07:- 4,441 kHz, "843 843 843 00000", very strong tonight, S9+, still following the first + third Saturdays in the month format.

1-Dec-07:- well now, I really did expect G06 YL to stick to a first + third Saturdays in the month routine and show up on 4,441 kHz at 2200z - but she didn't. A check on this frequency at around ten minutes before the hour found no sign of a tell-tale pre-transmission warm-up carrier - a bad sign! 2200z, 10 PM in the UK, came and went with no G06. Perhaps another change of frequency? The four minutes of the usual "00000" transmission had passed before this thought occured to me so was too late to initiate a search. Something of a disappointment here so I returned to watching "The Company" - "the powerful Cold War thriller based on Robert Littell's bestselling novel", as the BBC's programme guide *Radio Times* described it, the late evening offering on BBC 2-TV. Something worth watching on a Saturday night, for a change!

15-Dec-07:- 4,441 kHz, G06 turns up on the third Saturday in December as expected, no change of frequency. So where was it on the first, then? I put a receiver on 4,441 at around 2140z and observed the carrier come up at around 2138. Went off a bit after 2140z and seemed like it had gone, but was back up again when checked at 2150z. "843 843 00000", no change there, S9+ signal. [PoSW, tnx]

SLAVIC STATIONS

<u>806</u> [**IA**] See Charts Section for relevant charts from RNGB ---- Thanks RNGB.

We present two excellent views on S06, the first from RNGB followed by PoSW's views -these two pieces, with own logs, represent second to none analysis. Thanks to both PoSW and RNGB:

The S06 (fast) ID 326 gave its first message in November. It consisted of 33 groups. See log below.

A very strange message for ID 537 this month. Look at Tuesdays 1500/1510

The first two groups were a count down 0 to 6 and a count up from 1 to 5

The two middle groups were different by only the first figure, and the last two groups were all the figures from 0 to 9 only used once! Hope everyone follows. A meaningless message ??

09876 12345 39856 29856 10293 84756

Analysis from PoSW; "The main S06 schedules running in the UK evening are the Tuesday 1630 + 1730 UTC and the second + fourth Mondays in the month 2115 + 2215 UTC. Also, the Saturday 1600 UTC found again in November.

Tuesday 1630 + 1730 UTC Schedule:-

6-Nov-07:- 1730 UTC, 5,820 kHz, calling "192", DK/GC "750 750 63 63", the second sending of this schedule; has stayed on UTC following the end of summertime so now appears one hour earlier local time so some of us are not at home to hear it! Same frequency used in November last year.

7-Nov-07, Wednesday:- 1730 UTC, 5,820 kHz, next day repeat of, "192" and "750 750 63 63".

13-Nov-07:- 1730 UTC, 5,820 kHz, call "192", DK/GC "345 345 60 60".

 $14\text{-Nov-07, Wednesday:-}\ 1630\ UTC,\ 7,670\ kHz,\ able\ to\ monitor\ the\ first\ sending\ today,\ call\ "192",\ DK/GC\ "345\ 345\ 60\ 60".\ Something\ unusual$ about this one; two-way comms heard over the top, possibly Russian language. Thought at first it was co-channel interference but may have been on the transmission itself. Voices suddenly ceased at approx. 1636 and 30 seconds UTC as though something had been switched off. And there's more! When S06 finished the carrier stayed on for a few minutes and the E06 English Man voice could be heard very faintly. 1730 UTC, 5,820 kHz, second sending.

27-Nov-07:- 1730 UTC, 5,820 kHz, call "192", DK/GC "437 437 61 61". A right old cacophony on this frequency, a broadcast station noted on previous occasions with a weak signal but somewhat stronger this evening but over-riding everything was an E10 YL calling up with, "Yankee Hotel Foxtrot".

4-Dec-07:- 1730 UTC, 5,270 kHz, call "847", DK/GC "159 159 60 60", good signal, peaking S9. 5-Dec-07, Wednesday:- 1730 UTC, 5,270 kHz, next day repeat of "847" and "159 159 60 60", even stronger than yesterday, well over S9. 11-Dec-07, 1638 UTC, 6,860 kHz, managed to arrive home in time to log the first sending in progress. Ended before 1645z with, "915 915 62 62 00000".

1730 UTC, 5,270 kHz, second sending, call "847", DK/GC "915 915 62 62".

Second + Fourth Mondays in the Month Schedule:-

12-Nov-07:- 2115 UTC, 6,920 kHz, "893 893 893 00000", same frequency used in November last year.

2215 UTC, 5,440 kHz, second sending, also as last year. In the summer months this schedule was on at 2015 + 2115 UTC which was 9.15 PM and 10.15 PM UK local time; has shifted by one hour so it still appears at the same local time in the winter months which is somewhat unusual for a station of the IA family.

26-Nov-07:- 2115 UTC, 6,920 kHz, "893 893 893 00000", weakish signal, S4 to S5. And I was so absorbed in watching the 10-o'clock news on TV and the report of Gorgon Brown's mob and their questionable cash donations that I completely forgot to check out the second sending!

10-Dec-07:- 2115 UTC, 6,800 kHz, "210 210 210 00000", interference from an idling FSK carrier.

2215 UTC, 5,160 kHz, second sending, similar frequencies used in December last year.

Saturday 1600 UTC Schedule:-

Was heard on 6,783 kHz in September, the last occasion being on the 22nd. Not found at all in October although was most likely around somewhere. Found again in November on a much lower frequency:-

10-Nov-07:- 3,877 kHz, "754 754 754 00000", signal strength S7. A search just before the hour had found a likely carrier on 3,877. I lost track of this schedule right through the winter months last year but reference to back numbers of the Newsletter shows that RNGB logged it on 3,887 kHz - it had never occured to me search that low down. - not so far away from the frequency used today so may well be around this part of the spectrum for the next few months. Not found on the following Saturday, the 17th.

24-Nov-07:- 3,877 kHz, "754 754 754 00000", very strong signal, S9+. Carrier with tone was up when checked at 1549z, single "Syem pyat cheteria" just after 1550z then went into what I call "concealment" mode, i.e. short bursts of carrier two or three times a minute until start-up on the hour.

1-Dec-07:- 3,877 kHz, has stayed on the same frequency, "754 754 00000". Good signal, S9 to S9+, audio a little distorted. Carrier was up when 3,877 checked at 1540z, audio tone at 1545z until just after 1549z, a single spoken "Syem pyat cheteria" then steady carrier until start of transmission. And my favourite James Bond movie, "Live and Let Die" was running on ITV 1!

8-Dec-07:- 3,877 kHz, "754 754 754 00000", no change there, then Put a receiver on 3,877 at around 1535z and saw the carrier come up at

1540. Usual pre-transmission warm-up routine of tone and single "754". No sign of this one on 15-December." [*Tnx Peter*].

Analysis from RNGB:

S06

The ID 326 on Mondays/Thursdays first showed up on frequency 3162 kHz on Monday 3rd December and 5 minutes earlier at 1900. But on the Thursday it appeared at the normal time of 1905 and had moved up to 3590 kHz. By Monday of the second week it was using 3594 khz (same as November). 4th week it appeared at 1900 again on 3162 kHz.

ID '328' has disappeared from its normal Weds morning slot - where has it gone? Still no sign of ID '624' (used to be on a Tuesday).

The link between S06 and E17

An interesting occurrence on Weds 12th December was S06 (slow YL) found on 6280 kHz at time 0908.

She was giving '274' repeated for 4 minutes then 00000. I thought this maybe was a new schedule, but '274' did have a familiar ring about it! I continued monitoring 6280 waiting for the transmitter to switch off, whereby I was preparing to move up the meg range looking for a repeat 10 minutes later. But to my surprise '274' started up again at 0915 with '274' repeated twice followed by a 5 figure group '57396' all read very slowly – then '274' x 3 and 57396 just the once. This continued for 5 minutes, eventually ending at 0920 with 00000. Then at 0927 she was back on the air with the familiar '274' repeated for 4 minutes then a 15 group message;

'274' 536 15 58545 26285 46856 47765 19726 51547 59781 62498 55125 56544 57460 67477 85846 92406 02024 536 15 00000. (Note the similarity of the first 3 figure group with last 5 figure group message). Then almost immediately she started with '274' again and into yet another message – '274' 639 15 65460 55692 57190 41671 72453 02370 04710 52699 12848 57451 18554 65494 25156 43556 20018 639 15 (No 00000 ending) then: '274' 851 14 75787 97503 65149 61846 52059 39652 15568 67199 24558 87855 46007 45690 44504 32757 851 14 00000

Then an attempt at repeating the earlier message starting 536 15 58545. But several breakdown/restarts occurred and by time 1000 the repeated message had been successfully repeated. Nothing else heard!

Now, the ID '274' is the one always used by E17 during its sporadic bursts of activity with short messages up to 20 groups and is renowned for poor operating and frequent breakdowns. So, I just wonder if these are training exercises – where operators are given faults to sort out and/or left to experiment with the computer program? (I heard 'Windows' alert tones a couple of times).

The other E17 heard regularly is the E17z ID '674' which follows S06 (slow) procedures exactly.

Thanks RNGB and PoSW!

S10d [IXA] Nil Required Heard

<u>S11</u> [III]

RNGB wrote in a Group message, 'Another mistake by the E11 operator this evening 21/11 gave a rare insight to S11. Waiting for the E11 at 2050 on 5149 kHz. Nothing heard until 2052 when up pops S11 (Presta) with what sounded like 730/10 for about 2 minutes then transmission stopped. A minute later up came E11 with 338/10. There was heavy QRM on the frequency. So, S11 is still lurking somewhere and maybe there is, or is going to be, a message with ID 730 in the near future?' [Tks Richard]

Tues 20th Nov 2051 5149 730/10 (changed after 2 minutes to E11 and 338/10)

[Thanks John]
```

In answer to the above logs [they really are a monument to propagation] Manolis was moved to write: "First of all, thanks for the logs! Just to stress how amazing the ionosphere is (allowing worldwide reception), here's my log, from the island of Crete, Greece, ~15000 km from you and ~10000 km from Cuba...

V02a 5883kHz 0708z 03/12 [i.p. new YL, S3 on Icom R75 & EF-SWLantenna] MG MON

The lesson is: especially to newcomers: With some preparation (read the NL! Get a decent radio and antenna (not necessarily expensive!)), patience (familiarize with your radio and ionosphere) and luck (Oh my Great Sun, the Lord of all DXers!!!), you can log many numbers stations!! [Thanks Manolis - surely you mean 'Ra-Atum-Khepri', not that I would start a religious war].

PoSW writes of his experiences V02a, "Now that winter is upon us there is considerably more voice activity from Cuban Senorita audible at a reasonable time in the UK, most notably on 5,883 kHz at 0700 UTC, 7 AM - breakfast time - in the UK, having stayed on UTC so now appearing one hour earlier as from the last weekend in October.Heard on Mondays, Tuesdays and Thursdays, often a good signal but sometimes swamped by a strong signal from what appears to be a DRM broadcaster slightly LF. Also, a couple of V02a transmissions in the UK evening are giving reasonable signals, i.e. 2000 UTC, 7,887 kHz and 2100 UTC, 6,855 kHz. The hellfire-and-damnation broadcast station which was also on 6,855 appears to have gone; the American "You're all going straight to hell" evangelist that was on this frequency in previous winters usually made copy of V02a difficult. The Saturday and Sunday 0900 UTC, 9,040 kHz and 1000 UTC 9,240 kHz, both used for V02a voice transmissions in the not too distant past which I thought were plain carriers are, I think, the SK data lised by the Cuban Desk; there is the sound of data for a few minutes starting on the hour which I had assumed was an FSK data signal on a frequency a few hundred Hz away beating with the Cuban carrier but, well, perhaps not. This must be audio frequency shift, then, not the frequency shift keying of the carrier which is more usual with data transmissions.

So, V02a heard recently:-

30-Oct-07 Tuesday:- 0700 UTC, 5,883 kHz, now on one hour earlier local time following the end of summertime. "Atencion, 78943 65280 21318" signal peaking S9 at times, DRM or something like it slightly LF.

- 1-Nov-07, Thursday:- 0700 UTC, 5,883 kHz, not so strong this morning, wiped out by the digital signal, could just make out the "Atencion" of the call-up.
- 5-Nov-07, Monday and 6-Nov-07, Tuesday:- 0700 UTC, 5,883 kHz, the QRM wiping out the Cuban YL again, unreadable apart from "Atencion". 8-Nov-07, Thursday:- 0700 UTC, 5,883 kHz, ah, that's more like it, no QRM at all! "Atencion, 83361 18144 10542". 10-Nov-07, Saturday:- 2126 UTC, 6,855 kHz, first time I have heard the Cuban YL in the evening since last winter. Transmission in progress
- and no sign of the Holy Roller broadcaster which used to be on this same frequency. Perhaps the Almighty has struck him with a bolt of lightning: I'm sure He must be sick of right-wing preachers who think that God is an American and votes Republican!
- 13-Nov-07, Tuesday:- 0700 UTC, 5,883 kHz, "Atencion, 78720 50572 43422", very good signal this morning, peaking S9+ and the digital signal LF very weak. 2017 UTC, 7,887 kHz, transmission in progress, signal strength S5 to S6.
- 2124 UTC, 6,855 kHz, transmission in progress, peaking S7.
- 19-Nov-07, Monday:- 0700 UTC, 5,883 kHz, "Atencion, 21262 62262 62122", good signal this morning, over S9, beating all opposition.
- 0800 UTC, 5,898 kHz, "21262 62262 62122", as heard earlier, S9 with deep QSB.
- 0900 UTC, 9,040 kHz, this frequency used for voice on a weekday, then, unlike at weekends; "Atencion, 80272 84683 16885", not the same as heard at 0700 and 0800z, \$9 signal.
- 20-Nov-07, Tuesday:- 0700 UTC, 5,882 kHz, "Atencion, 56783 37545 60667", S9 with QSB, no interference.
- 22-Nov-07, Thursday:- 0700 UTC, 5,883 kHz, oh dear! propagation no good this morning, very weak signal, could just make out "Atencion", otherwise unreadable.
- 2100 UTC, 6,855 kHz, "Atencion, 91831 53261 86605", weak but reasonably clear.
- 25-Nov-07, Sunday:- 2116 UTC, 6,855 kHz, transmission in progress, peaking S7 to S8 with deep QSB.
- 27-Nov-07, Tuesday:- 0700 UTC, 5,883 kHz, "Atencion, 95111 04021 06427", \$7. 29-Nov-07, Thursday:- 0700 UTC, 5,883 kHz, "Atencion, 24187 10122 40518".
- 4-Dec-07, Tuesday:- 0700 UTC, 5,883 kHz, "Atencion, 87532 31328 67778".
- 11-Dec-07, Tuesday:- 0700 UTC, 5,883 kHz, "Atencion, 70324 67735 44768", S9 signal this morning." [Tnx PoSW].

<u>V13</u>[O] No reports

<u>V21</u> [O]

Before our log of this station we are pleased to include an interesting analytical piece.

The Babbler (V21) can be heard most mornings (Eastern USA time) on 6529U starting on or around 1400z (0900 Eastern Time). It seems when the clocks go forward or back in the spring and fall The Babbler will follow the change to keep on the 0900 Eastern Time schedule. Transmissions may start several minutes early or late.

Transmissions are by live voice (male) although female voices have been reported in the past. TXs on 5637U have also been reported on E2k.

Message Format:

Previously these transmissions have been described as Cuban Air Defense transmissions with the operator singing a sequence of numeric fields.

All transmissions heard recently have just been counts (test counts maybe?)

Generally starting at 1 (Uno) and counting upwards in groups of 10 normally with pauses every 10th number. Although the numbers are read very quickly as they are in sequence it is not to difficult to follow along once a few transmissions have been heard.

There is no indication that the day's counting has ended, the numbers just eventually stop.

Can any information be passed using this system? Some recent transmissions have been copied below.

Numbers start at 1 unless otherwise stated then stop and reset to 1 at the number given. Pauses which aren't on 10, 20, 30 etc are shown in parentheses.

6 November 50 END

29 November (Pause on 46) 50 (Pause on 26, 36, 46) 50 (Pause on 26, 36, 46) 50 Second Operator 100 100 END

18 December - 40 20 50 50 40 40 40 40 40 (Pause on 33) 40 40 40 40 40 40 40 END

19 December 100 100 100 53 END

20 December 100 50 36 10 Second operator up 100 65 END

22 December 100 100 100 END

23 December 40 40 40 40 40 40 40 40 9? ? (Too weak for copy) 40 40 40 (Unintelligible chatter) 40 40 30 END

24 December 40 40 40 40 40 END

26 December 50 50 40 40 30 40 40 40 40 40 (Spanish QRM on 6528) 40 40 30 END

Other notes:

Individual operators can be identified for example 21 and 28 would normally be pronounced Venti-Uno and Venti-Ocho, one operator does Venta-Uno and Venta-Ocho, all other numbers being pronounced with the 'i' as expected.

One possible callsign has been heard on several occasions it sounds like Viera Zero but as I don't speak Spanish this could mean something else.

Useful numbers below.

| | 1: uno | | - 19 : diecinueve | |

| | - 19 : diecinueve | | - 100: Cien | |

[Tnx Male Anon].

We have uploaded a soundfile to Group Fi listen to this file and comment.

Logs:

Westt1us writes, 'I caught the V21 Babbler on 6529 USB (as usual) today it was in the 1400z time slot whereas it has been in the 1300z slot since the clocks went forward in the spring. Seems like it always transmits at around 0900 Eastern time. [Excellent – tnx]

November 2007 Morning Schedule

November started with a 159 group message, the first sending at 0700z [clock change!] was not good quality due to the presence of a data station on frequency. 0720 and 0740z sendings were good at around S9 with PLondon whilst JoA's log shews a different result: 10327kHz 0700:00-0702: 00z Intro., 0702:00-0704: 03z msg. S9+25dB sl.QSB; 11627kHz 0720:01z S9+25dB sl.QSB; 13427kHz 0740:00z S8 sl.QSB-S5 All three: Good audio.

The message was:

10327kHz 0700z 02112007

364 364 364 1 364 364 364 1 364 364 364 1

 $A null \ message \ was \ received \ on \ 06/11 \ and \ at \ decent \ strength \ across \ the \ entire \ 0700z \ sendings, \ 40dBs \ to \ start \ and \ S9 \ for \ 0720 \ and \ 0740z.$

09/11 was plagued with problems, possibly propagational, with nearby station QRM at 0700z and fading to the signals at 0720 and 0740z, some slight QRN too. Good strengths on 13/11 to produce a 225 group message. Like good strengths, S9 across the schedule, were seen on 16/11 to produce a 221 group message.

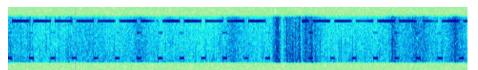

Good strengths on 20/11 as 40dBs, S7 and 20dBs for the null sending lasting 2m26s. The 23/11 sendings were of very good quality with PLondon, 40, 40 and 20dBs for the 4m39sec transmissions, splendid copy across the schedule for this 217 group message.

The last November morning transmissions were of good quality for a 167 group message lasting 4m8s.

November 2007 Evening Schedule

November freqs have been seen before and the report is the same: 02/11 evening schedule, 2100z sending poor due to BC splatter, believed to be Vatican Radio, 2120z excellent at20dBs and good audio, 2140z 20dBs carrier with poor audio.

06/11 like its morning schedule, produced a null message with signals that were strong. Interestingly there was a short break in the 2100z sending, 24secs into the opening:

The 09/11 2100z was poor thanks to BC splatter but the 2120 and 2140z sendings were strong, 20dBs but with weak audio [it's Igor again]. Message was a repeat of the 06/11 null message and the same again, with 40dBs signal strengths across the schedule and seen again with like strengths on 16/11.

40dBs but weak audio was first up on 20/11 followed by 30 and 25dBs for the next two sending. A null message! Another null message was seen 23/11; strengths were 20dBs for all sendings at PLondon's QTH and similar at JoA. The 2100z did have somewhat weak and watery audio. PLondon monitored the entire schedule automatically; JoA reported: 5891kHz 2100z Short msg. QRM-BC poor. 5268kHz 2119:58-2121:58z Intro.,

PLondon monitored the entire schedule automatically; JoA reported: 5891kHz 2100z Short msg. QRM-BC poor. 5268kHz 2119:58-2121:58z Intro., 2121:58-2122:22z Short msg. S7/S9 good audio. 4572kHz 2139:59z S8 QSB. Tnx John.

27/11 0n auto was 2100z, message - weak; 2120z Strong; 2140z Fair noisy - 2m24s for the 35 group message.

5268kHz 2120z 27112007 825 825 825 1 825 825 825 1 825 825 825 1

The above message being repeated with similar characteristics seen 27/11.

November other sendings:

RNGB found another XPA on Thursday evening 01112007:

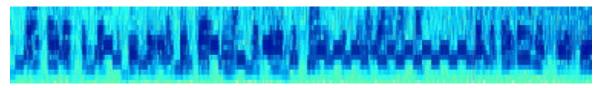

5864kHz 1940z 01/11 XPA LG 14762; this find was expanded into a Tuesday/Thursday schedule:

| 1.1900z 8164kHz | 2. 1920z 7364 | 4kHz 3. 1940z | 5864kHz |
|-----------------|---------------|---------------|---------|

On a strong initial find RNGB built the up schedule with the 1920z freq being last found on 08/11 thanks to being obviated by a BC QRM. 06 and 08/11 share the same message, the 1920z freq found on 08/11/ Here we can see the effect of the signal from the BC station on the wanted signal:

The message sent 06/11 and repeated 08/11 was:

<u>5864kHz 1940z 06112007</u> 138 138 138 1 138 138 138 1 138 138 13 138 1

13/11 sendings were of reasonable strength at S7 for the 1900 and 1940z sendings whilst the 1920z was totally obscured by a BC station. However the 207 group message was received adequately on the other freqs. For 16/11 the 1920z sending was again stopped by the 7365kHz resident BC station but the 1900 and 1940z sendings were reasonable at S5 and S8 respectively producing a repeat message, heard first 13/11.

For 20/11 similar strengths with the usual BC stn on the 2120z frequency. This same message was repeated on 22/11; 1900z was very poor and weak, 1920z was obviated by the BC station whilst S8 and some BC splatter was the result for the 1940z transmission.

27/11 was monitored on auto by PLondon who found signals at 1900 were poor although JoA reported good audio. BC stuff on the 1920z transmission and the 1940z was poor also. JoA noted 8164kHz 1859:59-1901:59z Intro., 1901:59-1905:12z msg. Good audio, but measured S2/S3 rising to S4 QRN-noise in background. 7364kHz ~1920z Audio heard above QRM-BC-Het., sl.QSB, unable to measure strength. 5864kHz ~1940z Good audio, sl.QRM-BC & QRN-noise but notes, receiving no MSF signal, so timings may be v. slightly out. [tnx John]

29/11 sendings were usual of poor quality thanks to the splatter experienced at 1900 and 1940z and the total BC block out at 1920z

Because this schedule appears to be regular it will be likewise reported:

December 2007 Morning Schedule

Frequencies were as expected for the December schedule; JoA writes: 8147kHz 0700:01-0702: 01z Intro., 0702:01-0705: 27z msg. S9+30/40dB; 10147kHz 0720:01z S9+10dB with 2 x 25dB peaks sl.QSB; 12147kHz 0740:00z S9 QSB. PLondon's strengths from his office QTH in South Kensington were 20dBs, S9 and S7 with QSB on the first two freqs. All had good audio to produce the massive 5m26s long 293 group message:

The sendings on 07/12 were strong with good audio: 40dBs; 20dBs and S9 at PLondon's QTH whilst those on 11/12 enjoyed similar conditions for the null message.

Message of 07/12 courtesy of the mysterious 'X':

That on 14/12 produced a 163 group message with reasonable signal strengths and good audio. JoA reported 14/12 as 8147kHz 0659:58-0701: 58z Intro., 0701:58-0704: 03z msg. S9 sl.QSB; 10147kHz 0719:58z S8 sl.QSB; 12147kHz 0739:58z S7/S9 sl.QSB.

The variable signal strengths being seen for the usually strong 0700z schedule showed an upturn with S9 recorded by PLondon at his home QTH across the entire schedule on Tuesday 18/12, albeit for a null message. Strong audio again dominated all the 21/12 sendings of the schedule for the 4m11s of the 173 group message.

Strong signals on Christmas day for a 281 group message, taking 5m19s to send.

December 2007 1900z Tu/Th Evening Schedule

The first sendings of this recently discovered schedule [tnx RNGB] occurred on the freqs discovered by PLondon, JoA and RNGB; the telephone lines were certainl; y hot that evening. PLondon originally claiming poor quality audio but the sendidngs would have been better for him if he had switched out the notch and returned the passband tuning to its nominal position. Nonetheless the job was done.

The sendings of 07/12 were good, S9 for the 1900z and strong and very strong the next two [autosys used in manual mode] for the 245 group message.

 $JoA's \ findings \ for \ 07/12 \ were: \ 8147kHz \ 0700:01z - 0704:54z \ msg. \ S9+30dB.10147kHz \ 0720:01-0722:01z \ Intro., 0722:01-0724:54z \ msg. \ S9+30dB.10147kHz \ 0720:01-0722:01z \ Intro., 0722:01-0724:54z \ msg. \ S9+30dB.10147kHz \ 0740:01z \ S9+25/5dB.$

11/12 found PLondon at home where he was able to report good sigs for the 0700 and 0740z sendings. His radio dedicated PC made a few strange noises and temporarily gave up the ghost during the 0720z sending but JoA was on hand to give his report for the null message for:

the business bit looking like this:

8147kHz. 0700z S9+30dB sl.QSB; 10147kHz Good audio; 12147kHz 0740:01-0742: 01z Intro., 0742:01-0742: 27z 0msg. JoA's report reads:

~S9+15/20dB. [Tnx John].

The 377 group message of 11/12 enjoyed good signals across the schedule, S8/9; S9 and S7 to 20dBs with QSB evident. The sending took 6m18s and was repeated on 13/12 but the first two sendings were poor with noise whilst the 1940z was barely fair and noisy.

The 4m30 sendings of the 18/12 schedules were all recorded on Auto, producing a 199 group message. From the spectrograms PLondon could see all sendings were strong with the audio of 1940z being particularly good. There was a 4m30s message on 20/12 but noise did not permit a good signal; bearing in mind the last group 25103 were the same we can assume the message was a repeat.

Christmas day sending was intercepted by PLondon's autosys and which revealed poor signals for the 365 group message:

873 1 00892 00365 77284 25005

On Thursday 27/12 PLondon tuned up on 7891kHz and heard nothing but noise with some rapid Morse below it = = being sent. PLondon spoke with RNGB who had heard the sending occur on 8164kHz, the previous November freq [well done Richard!]. The next freq was 7365kHz and known to be useless thanks to a BC station that sits on that particular slot, followed by 5864kHz, usually giving good results.

The message, usually a repeat of the previous message was good quality but with a reduced signal strength. RNGB queried a mistake and the usual jokes about the polytone op being dragged out and shot for his error were passed. However - a mistake? Probably not, unless this is January's freqs being used prematurely as RNGB suggest. This particular scheduled freq was used in November 2007 so we knew the ident already. The message was indeed a repeat and it was found to be:

138 1 00892 00365 77284 25005

We'll doubtless find out in time for the next newsletter! [It wasn't, other freqs were used]!

The sendings intercepted on 04/12 were all excellent strength, +40dBs with PLondon and of good quality elsewhere. Freqs originally thought to be 5425, 4968 and 4475 but altered to 5424, 4968 -no change- and 4473 following JoA's measurement exercise - thanks JoA.

JoA's findings for 07/12 [and repeat message seen on 04/12] reads: 5424kHz 2100:01-2102: 01z Intro., 2102:01-2102: 15z 0msg. S9+5/10dB.

4968kHz 2120:00-2122: 00z Intro., 2122:00-2122: 14z 0msg. S9; Freq. check: 4965.8 + 4970:3 /2 = 4968.05 = 4968kHz.

4473kHz 2140:01z S8 QSB. Note that John performed a freq check. PLondon's reception was automatically done but he found XJT on the 2120z sending. 5425kHz 2100z 07122007

09304 00001 00000 10140+++++++++++++++++

11/12 transmissions carried a 63 group message taking just 2m32s to complete with excellent audio and very good strengths for the sendings:

 $00195\ 00063\ 44311\ 38204\ 67193\ 42160\ 83444\ 79221\ 16612\ 94870\ 61488\ 38092\ 18035\ 07503\ 56641\ 25890\ 86724\ 65224\ 83552\ 20254$ 32512 19431 79661 18535 49010 23330 14982 36952 65644 45432 88020 53926 88574 78797 48656 14802 62534 29504 60468 02797 66737 47687 97534 37809 97124 55693 18887 88548 27634 91798

Mndbs reporting: 5424kHz 2100z 11/12 tones +10db ends 2102.30 mikesndbs TUE - tnx Mike.

This message was repeated on 14/12 with similar good strength.

Another Auto interception on 18/12 from PLondon due to the last episode of Spooks on TV [don't trust DVD recorder, but it would have functioned better if the correct input had been selected ③]. The 2100 and 2140z were strong, lasting 2m14s for the null message whilst the tones of the 2120z were disrupted by the unwanted very noisy XJT sending parked on a very close frequency.

A like report from the 21/12 sending, again XJT wrecking the 2120z sending of the 87 group message, lasting 2m41s.

Autosys for this one again on 25/12. Thanks to a glitch on the net my RX320 shut down during the 2120z sending. Luckily I ran the back up system to that and managed to intercept all three sendings producing a repeat message sent on the 2100z schedule on 21/12.

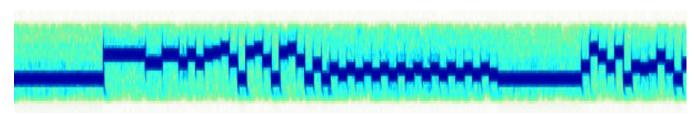

XPA2 November 2007

RNGB wrote, "Found XPA2 Friday 23/11 morning at 1150z on 10427kHz and repeat at 1210z on 11574kHz then had to depart for work. What is unusual about this is that the repeat is 20 minutes later rather than the usual 10 minutes suggesting the sked may have been 1130/1150/1210 or 1150/1210/1230z

Also, this one had an ID where none of the others we've recorded ever had. The ID was only sent three times followed by a figure 1

793 1 09507 00050 15008 LG 62662

The ID doesn't seem to have any relationship to the frequencies."

 $Spectrographic \ representation \ of \ Richard's \ signal-the \ id \ can \ clearly \ be \ seen \ as \ 793 \ 793 \ 100 \ and \ 100 \ and$

RNGB's logs - note 1130z freq found by Richard

Only 24 complete pulses sent.

Attempts to find XPA2 in Jan 2008 have been unsuccessful to date.

ENIGMA 2000 Article:

MILITARY COMMUNICATIONS THEN AND NOW. By HJH

Part 1

This article is the result of a late night telephone conversation between Paul Effendi, and myself. (Aren't they all!!!) It will attempt to trace the history of military communications from the earliest times, up to now. Reference will be made, chiefly, to the developments in the British Armed Forces, with some references to the Armed Forces of the USA and Germany, (East and West, where such is applicable.) The reason for this is simply explained. The author served in the British Army as a signaller, has knowledge of the signalling technology of the German Army, and also some of that in the Armed Forces of the USA. (And you guys thought all we squaddies did was drink beer and chase women! HA!!!) As usual, all mistakes made, conclusions drawn, and opinions expressed are the authors, and have no connection with any military or government organisation with which I have in the past been, now am, or may in the future be, associated. As is usual with such articles, the author has had to consult many sources. Most, almost all have been of great help. My thanks to the following. Copyright for all material, photographic or written, obviously remains with the persons credited; - The Royal Corps of Signals Museum, Blandford Forum, Dorset. I am indebted to the museum for permission to use some of the wonderful images on their site. Also for their information for use as source material. This article would have been so much the poorer without it. The museum is well worth a visit, and equally worthy of support, in whatever way you can. I am also indebted to my colleagues of the NVA Forum. The research which they assisted me to carry out, and their permission to use material and photos from their Forum, was instrumental in researching Warsaw Pact communications equipment. I would like to thank Oker, Ritchie, and Volker, and will name all other contributors from the Forum as and when the material appears.

As this is an article about military communications, various wars and campaigns will be mentioned. The rights, wrongs, and any grievances, real or imagined are far outside the scope of this article and will not be attempted or indulged in.

Although not strictly a communications system, radar and its associated countermeasures will be briefly mentioned, as will SONAR, The reason is, that these systems played such a large part in the history of the military communications of our, and most other, comparable nations. I will doubtless make mistakes and omit things which some of our readers may consider important. Please let me know via the E2K website. This is by no means an exhaustive study of a subject which we all find fascinating. And. while we are about it, what nicknames do we give our signallers? Too many to count! In the British Army, we were called, variously, Bleeps, Sparkies, Scaleybacks, and some others which I forget. Sparks was usually reserved for the Royal Navy or Merchant Navy radio operators, although the RAF also used it I believe. Scaleybacks is, I am reliably informed a reference to when all radio kit was battery powered. Thus, a lot of acid was about and got spilled. This gave them scaly backs, like lizards, I guess! The German Army had one which I cannot translate 'cos this is a family show! I have used at first the word "wireless" instead of radio, because that is what the rest of the world called it at first, Marconi included. If it was good enough for him, it sure is good enough for me. Obviously as time went on, radio replaced this, and so it will be here. So, pull up a sandbag, slip on your headphones, and let us see what emerges from the static.

Military communications, in its various forms, has been around since man began organised warfare. The need for supplies, reinforcements, and to communicate with "the folks back home" was not ushered in with the arrival of the thermionic valve/vacuum tube! What article of this nature would be complete without a time line? So, let us begin by seeing just where this entire signalling lark did kick off! The earliest mention which this author can find is references to the signalling techniques which were employed by the ancient Greeks. That would put us squarely in the BC timeframe. It is recorded that Ancient Greek warriors used their polished shields to signal with. This was in 405 BC.Obviously, this was used in tandem with already established techniques such as guys riding fast horses, (dispatch riders, or as they were called in the Royal Corps of Signals, Don Rs, soon shortened to D.R.s) This was obviously the preferred method, as having guys run to Marathon with news was too strenuous, not to mention potentially fatal! So, physical delivery was, for a while, the only way, be it on two legs or four. The Ancient Greeks had it first with air mail too. The first recorded use of carrier pigeons is attributed to them in 776 BC when the news of the results of the Olympic Games was sent to Athens by carrier pigeon.

Enter here the amphora, which as you know is what the Greeks of those times used to carry their wine in. Take two amphoras (or amphorae) and fill to capacity. At the base of each, is a hole plugged firmly to stop wine or water escaping. (Probably water; just wait for what happens next!) In each is floated a stick each of which is calibrated identically with letters, phrases and numbers. Both vessels are placed in their respective signalling stations, each of which must obviously be within sight of each other. On a prearranged signal, the plugs of both vessels are withdrawn. The sender watches as the stick falls lower and, when the correct spot on the stick is reached,(i.e. the spot at which it sends the message phrase or letter which it is desired to send.) the cork is replaced. Here, it is presumed a signal is made between the two stations saying "RECEIVED" or similar. This procedure would be continued until the whole message was sent in its entirety. It is known that the Roman Army of later years, although just as heavily reliant upon the physical delivery of written messages by horse rider or runner, employed a system which was broadly similar. Both would have probably also used flashing signals from highly polished metal (or glass, which the Romans are known to have had.) to send long distance signals. It is recorded that the Roman emperor Tiberius used mirrors to send messages, an early form of heliograph. This was in 37 BC. We can assume the Roman Army "Scaleybacks" were making use of the same technique soon after. The Romans, and the Ancient Greeks, also made use of huge bonfires as warning beacons, something which has continued throughout history.

We fast forward now to 1793, and a Frenchman, Claude Chappe, devises a long distance semaphore system for long distance signalling. (See photo on page 6.) This system is said to have been intended for visual or optical use over a telegraph line. One of his countrymen, a former Artillery officer named Depillon, improved on this by devising a semaphore system with a machine using 3 or 4 arms, mechanically operated. This system had a 301 word vocabulary and was installed along the French coast and was used to communicate with ships at sea. A step forward, but the transmitter receiver was still confined to visual distance signalling. Relay stations were a possibility, but mistakes could creep in with such relay systems.

On now to 1816, and Admiral Sir Roger Popham of the Royal Navy (Finally! A Brit! THAT is a relief!) tests a semaphore system which he has invented 16 years previously. (One simply cannot rush these things!) Using the system which he has mounted on several individual warships in the English Channel, the tests are declared a success. The Admiral receives a prize of £2,000. A communications chain is soon established between Whitehall in London, Portsmouth, Plymouth, Chatham and Dover.

In 1821, Charles Wheatstone (of Wheatstone bridge fame) invents the microphone. At this stage, it is just a primitive box, capable of reproducing sound, but we are on the way! Joseph Henry, in 1831, invents the first electric telegraph. Just to help him along a little, and to get radio operators everywhere to know his name, Samuel Morse devises the Morse code. (See page 3 below.) In 1843, Samuel Morse invents the first long distance electric telegraph line. That same year, Alexander Bain invents, and is awarded a patent for, the fax machine. (Interestingly, in 1861, in the USA, the Pony Express Service is started. Had they but known about all the foregoing, would they have bothered?) The outbreak of the Crimean War in 1854 saw the first use in war of the electric telegraph system. The war ended in 1856.

In 1855, purely for maritime users, and by international agreement, a system of various coloured flags was introduced. That system has remained with us to this day. Hoisted at a ship's yardarm, they can either be used, a'la Admiral Nelson, to spell out a message, (England expects---) or one flag alone can signify one particular set of circumstances. Being of a particularly lazy turn of mind, (what there is of it!) I have listed them below, together with the international Morse code. The international semaphore code is given also. As you can imagine, each nation has slight variations due to the in tonal inflections which some national languages, such as German, require on certain letters. In 1861, the American Civil War broke out. Lasting until 1865, it saw innovations if not in signalling technology, certainly in cryptographic expertise.

1876 is the year in which Alexander Graham Bell invents the telephone. The next year, 1877, Thomas Edison takes out a patent on the phonograph. This is a machine which is capable of recording sound onto a wax cylinder. Things are now REALLY starting to roll!!! That same year, a German-American inventor named Emile Berliner, (No, not the guy who wrote speeches for JFK!!!) invents the gramophone. This is described as a system of recording which can be used over and over again.

In 1889, an American undertaker in the American mid West, fed up of other undertakers out body snatching him, finds out that the competition is getting tipped off about the whereabouts of the latest stiffs from the local shoot-outs by a sneaky telephone exchange operator. Named Almon Strowger, does he get mad? No siree Bob, he sits down and invents an automated telephone exchange, or direct dial telephone. He gives us the Strowger Switch, and himself a place in the telecoms hall of fame!

In 1894, Gugliemo Marconi was making improvements to wireless telegraphy, which would soon have a vast impact on the world. 1898 saw the birth of that all time favourite, (depending on which end of the "dog and bone" one happens to be at the time!!!) the telephone answering machine. Also in 1898, a Danish engineer Valdemar Poulsen, invented a device which has affected most of us here in E2K, namely the magnetic sound recorder. Initially, he used magnetized piano wire. Later, aluminium wire was used, and, later still, magnetic tape. Also in this year, loudspeakers were invented. Sadly, the genie was out of THAT particular bottle, and Sunday afternoon in many nations would NEVER be quite the same again!!!

1902 saw Marconi make his historical transmission from Cornwall to Newfoundland across the Atlantic Ocean. 1906 was the year in which Lee De Forest invented the amplifying tube or valve. .Called the triode, this device allowed the amplification of signals of ALL natures in all disciplines of electronic communication, be it phone or radio. 1912 saw Edwin Howard Armstrong build the regenerative receiver.1914 was the year in which the first inter continental telephone call was made, although the war from 1914 to 1918 made sure that there was not too much good news to pass on them thar wires!!! In 1916, radios were made which had tuners, thus permitting the selection of various stations. 1918 saw the now Major (US Army Signal Corps) Howard Armstrong, having served in France, build the super heterodyne radio. He followed this in 1922 with the super regenerative receiver.

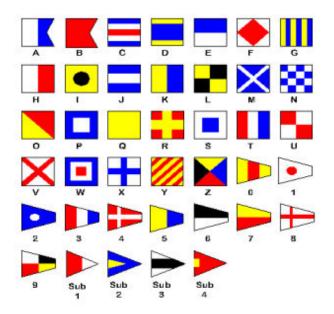

In 1923, a gentleman named Vladimir Kosma Zworykin invented the cathode ray tube. Also called by some the television or iconoscope, it heralded the first television camera. Then, in 1925, John Logie Baird transmitted his first experimental TV signals. In 1926, in the USA, Warner Bros. made great advances in synchronised recording of sound on motion pictures.

1927 sees the start of NBC with 2 radio networks. CBS is founded. Television broadcasts begin in England. (Turn the clock back, anyone?!) 1930, not to be outdone, TV starts up in the USA. Movie tone recording system allows recording of sound directly on to film. In between, in 1933, just to keep the pot boiling, Howard Armstrong builds a complete FM (Frequency Modulation) radio system. Now we really ARE cooking on gas! Somewhere around this time, a gentleman named John Renshaw Carson designs and builds a single side band receiver and transmission system. (You sure can't have one without the other!!!) In 1934, Joseph Begun (most apt name!!!) invents a tape recorder intended for broadcasting. This is the first magnetic recording. In 1938 the technology is now such that TV broadcasts can now be taped and edited. Hitherto, all broadcasts had to be live. Also around about now, Lee Deforest and Howard Armstrong become embroiled in a legal slug fest about who invented the superhet amongst other doo-dads. This is no place for such a discussion, even if this author could understand all those big words like resistor and voltage! In 1939, scheduled TV broadcasts begin, only to be taken off air with the start of World War 2. (How times have changed! Today, they would probably demand to write a sound track for it, and argue over the screening rights!!!) The 1940s years see the development of the Colossus electronic computer, and various other advances in radar and sonar, plus the associated counter measures.

Post war, in 1947, the transistor is born.1949 is the year of network TV start-up in the USA. In 1951, the first electronic computers are offered for sale commercially.

In 1969, ARPANET, the forerunner of the internet, starts up. 1971 is the year in which the computer floppy disc is invented, and also the microprocessor. 1976 sees the birth of the Apple computer. The internet is born from an idea and requirement by the American Military for a secure, fast, communications system.

Like all inventions, taken alone, these inventions despite being technological breakthroughs, are not, in themselves, that startling. What they needed was a couple of really good wars and the technological impetus that such things always seem to bring. And, as we all know, wars are like women, buses, and trains. If you miss this one, no worries. There will soon be another along.

MARITIME SIGNAL FLAGS

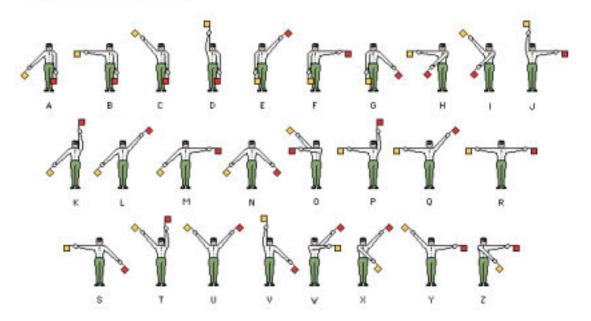

MEANING OF THE FLAGS

- A Diver below (when stationary) or undergoing a speed trial
- B Taking on or discharging explosives
- C Affimative (yes)
- D Keep clear, maneuvering with difficulty
 - E Altering course to starboard
- F Disabled, communicate with me
- G I require a pilot
- H I have a pilot on board
 - I Altering course to port
- J Am going to send a message by semaphore
- K Stop instantly
- L Stop, I have something important to communicate
- M I have a doctor on board
- N Negative (no)
- O Man overboard
- P All aboard, vessel is about to put to sea or lights are out (at sea)
- Q My vessel is healthy and I request free practique
- R The way is off my ship, you may feel your way past me
- S My engines are going full speed astern
- T Do not pass ahead of me
- U You are standing into danger
- V I require assistance (not distress)
- W I require medical assistance
- X Stop carrying out your intentions and watch for my signals
- Y I am carrying mail
- Z Used to address or call shore stations
- N & C I am in distress

SEMAPHORE ALPHABET

SEMAPHORE ALPHABET

Part2 next time.....

Before we move on to other interesting stuff here are some Embassy pics sent to us by a long term member Mr Henry Rimmer, of Harrogate who has an ongoing interest in this sort of thing. The Embassies are in Cairo, Egypt and the images were taken by Henry whilst on a touring holiday [we liked the pics of Rameses II as well Henry but not relevant here]:

Sudanese Embassy

Italian Embassy

Italian Embassy [specific view of antenna at right of above image].

 $Thanks\ Henry-glad\ you\ enjoyed\ your\ break!$

Now a review:

Mains RF noise a filtering option reviewed for Enigma 2000 by mikesndbs

With the wonderful celebration of Christmas upon us I noticed that with each set of decorative lights that went up so did my QRM levels to a point where it was S5 most evenings!

Rotating my loop antenna seemed to make little difference.

It was only when using my Sony 2001D on battery power and outside one night that I realised a good deal of the QRM could be mains borne!

This surprised me somewhat as all of my power supplies have filtering.

However I decided to see what the market had available and after much Googling I settled upon the following product that I will review for members now in case they might like to consider it.

The Tacima CS929 is a 6 Way Mains Conditioner and Radio Frequency Interference Filter plus surge protection. Being six way it gives plenty of flexibility in the shack.

You get 2 meters of 13 amp flex with attached three pin plug.

At the right hand end of the unit there is a clear window where you can see the filtering components.

It's quite a nice touch I think ©

There is no neon light as these can apparently cause QRM also.

Here is a close up of the filter.

Thanks Mike...... Good stuff.

Since installing this unit I have found my QRM levels significantly reduced at all listening times.

Swapping back to the old four way adapter I was using shows for example S4 of noise, putting the CS929 back in line reduced the level to S0-1.

I have been quite amazed and would recommend it to anyone who wants to try and get the edge with there listening.

If you don't find it helpful then use it with your TV or Hi Fi where a significant improvement will be seen.

The CS929 is available from various outlets but I got mine from Amazon.co.uk for just over $\pounds 20$.

Here is a direct link http://tinyurl.com/39kzqh

In closing I wish all readers a very happy new year. Mikesndbs

Here's two interesting articles sent to us by J6M which were originally seen in the Sydney Morning Herald whose links we gladly print here.

Available for net users from: http://www.smh.com.au/articles/2007/11/12/1194766589522.html?page=fullpage#contentSwap3

and http://www.smh.com.au/news/security/police-raid-hacker-of-the-year/2007/11/15/1194766821481.html

TECH

The hack of the year

November 13, 2007

A Swedish hacker tells how he infiltrated a global communications network used by scores of embassies over the world, using tools freely available on the internet.

Hacker Dan Egerstad.

In August, Swedish hacker Dan Egerstad gained access to sensitive embassy, NGO and corporate email accounts. Were they captured from the clutches of hackers? Or were they being used by spies? Patrick Gray investigates the most sensational hack of 2007.

IT WASN'T supposed to be this easy. Swedish hacker Dan Egerstad had infiltrated a global communications network carrying the often-sensitive emails of scores of embassies scattered throughout the world. It had taken him just minutes, using tools freely available for download on the internet.

He says he broke no laws.

In time, Egerstad gained access to 1000 high-value email accounts. He would later post 100 sets of sensitive email logins and passwords on the internet for criminals, spies or just curious teenagers to use to snoop on inter-governmental, NGO and high-value corporate email.

The question on everybody's lips was: how did he do it? The answer came more than a week later and was somewhat anti-climactic. The 22-year-old Swedish security consultant had merely installed free, open-source software - called Tor - on five computers in data centres around the globe and monitored it. Ironically, Tor is designed to prevent intelligence agencies, corporations and computer hackers from determining the virtual - and physical - location of the people who use it.

"Tor is like having caller ID blocking for your internet address," says Shava Nerad, development director with the Tor Project. "All it does is hide where you're communicating from."

Tor was developed by the US Navy to allow personnel to conceal their locations from websites and online services they would access while overseas. By downloading the simple software, personnel could hide the internet protocol address of their computers - the tell-tale number that allows website operators or intelligence services to determine a user's location.

Eventually the navy realised it must take Tor beyond the armed forces. "The problem is, if you make Tor a tool that's only used by the military... by using Tor you're advertising that you're military," Nerad says.

So Tor was cast into the public domain. It is now maintained and distributed by a registered charity as an open-source tool that anyone can freely download and install. Hundreds of thousands of internet users have installed Tor, according to the project's website.

Mostly it is workers who want to browse pornographic websites anonymously. "If you analyse the traffic, it's just porn," Egerstad told Next by phone from Sweden. "It's kind of sad."

However, Dmitri Vitaliev, a Russian-born, Australian-educated computer security professional who lives in Canada, says Tor is a vital tool in the fight for democracy. Vitaliev trains human-rights campaigners on how to stay safe when online in oppressive regimes. "It's incredibly important," he said in a Skype chat from the unrecognised state of Transnistria, a breakaway region in Moldova where he's assisting a local group working to stop the trafficking of women. "Anonymity is a high advantage in countries that perform targeted surveillance on activists."

It's also used to bypass website censorship in more than 20 countries that censor political and human rights sites, he says.

Tor works by connecting its users' internet requests, randomly, to volunteer-run Tor network nodes. Anyone can run a Tor node, which relays the user's traffic through other nodes as encrypted data that can't be intercepted.

When the user's data reaches the edge of the Tor network, after bouncing through several nodes, it pops out the other side as unencrypted, readable data. Egerstad was able to get his mitts on sensitive information by running an exit node and monitoring the traffic that passed through it.

The problem, says Vitaliev, is some Tor users assume their data is protected from end to end. "As in pretty much any other internet technology, its vulnerabilities are not well understood by those who use it (and) need it most," he says.

The discovery that sensitive, government emails were passing through Tor exit nodes as unencrypted, readable data was only mildly surprising to Egerstad. It made sense - because Tor documentation mentions "encryption", many users assume they're safe from all snooping, he says.

"People think they're protected just because they use Tor. Not only do they think it's encrypted, but they also think 'no one can find me'," Egerstad says. "But if you've configured your computer wrong, which probably more than 50 per cent of the people using Tor have, you can still find the person (on) the other side."

Initially it seemed that government, embassy, NGO and corporate staffers were using Tor but had misconfigured their systems, allowing Egerstad to sniff sensitive information off the wire. After Egerstad posted the passwords, blame for the embarrassing breach was initially placed on the owners of the passwords he had intercepted.

However, Egerstad now believes the victims of his experiment may not have been using Tor. It's quite possible he stumbled on an underground intelligence gathering exercise, carried out by parties unknown.

"The whole point of the story that has been forgotten, and I haven't said much about it, (is that) many of these accounts had been compromised," he says. "The logins I caught were not legit users but actual hackers who'd been reading these accounts."

In other words, the people using Tor to access embassy email accounts may not have been embassy staff at all. Egerstad says they were computer hackers using Tor to hide their origins from their victims.

The cloaking nature of Tor is appealing in the extreme to computer hackers of all persuasions - criminal, recreational and government sponsored.

If it weren't for the "last-hop" exit node issue Egerstad exposed in such a spectacular way, parties unknown would still be rifling the inboxes of embassies belonging to dozens of countries. Diplomatic memos, sensitive emails and the itineraries of government staffers were all up for grabs.

After a couple of months sniffing and capturing information, Egerstad was faced with a moral dilemma: what to do with all the intercepted passwords and emails.

If he turned his findings over to the Swedish authorities, his experiment might be used by his country's intelligence services to continue monitoring the compromised accounts. That was a little too close to espionage for his liking.

So Egerstad set about notifying the affected governments. He approached a few, but the only one to respond was Iran. "They wanted to know everything I knew," he says. "That's the only response I got, except a couple of calls from the Swedish security police, but that was pretty much all the response I got from any authority."

Frustrated by the lack of a response, Egerstad's next step caused high anxiety for government staffers - and perhaps intelligence services - across the globe. He posted 100 email log-ins and passwords on his blog, DEranged Security. "I just ended up (saying) 'Screw it, I'm just going to put it online and see what happens'."

The news hit the internet like a tonne of bricks, despite some initial scepticism. The email logins were quickly and officially acknowledged by some countries as genuine, while others were independently verified.

US-based security consultant - and Tor user - Sam Stover says he has mixed feelings about Egerstad's actions. "People all of a sudden (said) 'maybe Tor isn't the silver bullet that we thought it was'," Stover says. "However, I'm not sure I condone the mechanism by which that sort of information had to be exposed in order to do that."

Stover admits that he, too, once set up a Tor exit node. "It's pretty easy . . . I set it up once real quick just to make sure that I could see other people's traffic and, sure enough, you can," he says. "(But) I'm not interested in that sort of intelligence gathering."

While there's no direct evidence, it's possible Egerstad's actions shut down an active intelligence-gathering exercise. Wired.com journalist Kim Zetter blogged the claims of an Indian Express reporter that he was able to access the email account for the Indian ambassador in China and download a transcript of a meeting between the Chinese foreign minister and an Indian official. In addition to hackers using Tor to hide their origins, it's plausible that intelligence services had set up rogue exit nodes to sniff data from the Tor network.

"Domestic, or international . . . if you want to do intelligence gathering, there's definitely data to be had there," says Stover. "(When using Tor) you have no idea if some guy in China is watching all your traffic, or some guy in Germany, or a guy in Illinois. You don't know."

Egerstad is circumspect about the possible subversion of Tor by intelligence agencies. "If you actually look in to where these Tor nodes are hosted and how big they are, some of these nodes cost thousands of dollars each month just to host because they're using lots of bandwidth, they're heavy-duty servers and so on," Egerstad says. "Who would pay for this and be anonymous?"

While Stover regards Tor as a useful tool, he says its value is greatly overestimated by those who promote and use it. "I would not use or recommend the tool to hide from people between you and your endpoint. It's really purely a tool to hide from the endpoint," he says.

As a trained security professional, Stover has the nous to understand its limitations, he says. Most people don't.

The lesson remains but the data Egerstad captured is gone, the Swedish hacker insists. He's now focusing on his career as a freelance security consultant. "I deleted everything I had because the information I had was belonging to so many countries that no single person should have this information so I actually deleted it and the hard drives are long gone," he says.

Patrick Gray's interviews with Dan Egerstad and Sam Stover can be heard in his podcast from http://ITRadio.com.au/security.

Police swoop on 'hacker of the year'

Asher Moses November 15, 2007 - 10:55AM

Swedish internet security consultant Dan Egerstad. Inset: The article from Tuesday's Next.

The Swedish hacker who perpetrated the so-called hack of the year has been arrested in a dramatic raid on his apartment, during which he was taken in for questioning and several of his computers confiscated.

Dan Egerstad, a security consultant, intercepted data carried over a global communications network used by embassies around the world in August and gained access to 1000 sensitive email accounts. They contained confidential diplomatic memos and other sensitive government emails.

Details of the hack were reported on this site on Tuesday.

After informing the governments involved of their security failings and receiving no response, Egerstad published 100 of the email accounts, including login details and passwords, on his website for anyone curious enough to have a look. The site, derangedsecurity.com, has since been taken offline.

The hack required little more than tools freely available on the internet, and Egerstad maintains he broke no laws. In fact, he is confident the email accounts he gained access to were already compromised by other hackers, so his efforts in fact prevented them from continuing their spying.

Egerstad was soon back to his regular routine but, on Monday morning, his apartment, located 650 kilometres from Stockholm, was raided by four agents from Swedish National Crime (which Egerstad calls "our FBI") and Swedish Security Police ("our CIA").

About 9am Egerstad walked downstairs to move his car when he was accosted by the officers in a scene "taken out of a bad movie", he said in an email interview.

"I got a couple of police IDs in my face while told that they are taking me in for questioning," he said.

But not before the agents, who had staked out his house in undercover blue and grey Saabs ("something that screams cop to every person in Sweden from miles away"), searched his apartment and confiscated computers, CDs and portable hard drives.

"They broke my wardrobe, short cutted my electricity, pulled out my speakers, phone and other cables having nothing to do with this and been touching my bookkeeping, which they have no right to do," he said.

While questioning Egerstad at the station, the police "played every trick in the book, good cop, bad cop and crazy mysterious guy in the corner not wanting to tell his name and just staring at me".

"Well, if they want to try to manipulate, I can play that game too. [I] gave every known body signal there is telling of lies ... covered my mouth, scratched my elbow, looked away and so on."

Egerstad said the police also accused him of theft because he had eight PlayStation 2 consoles in his apartment. He said he owns a company that "handles consoles".

Egerstad was released and no charges have been laid against him, but the police are in the process of investigating the matter and nothing has been ruled out.

Linus Larsson, a reporter for *Computer Sweden* magazine whom Egerstad called after the ordeal, said in a phone interview he had confirmed with Swedish police that the raid took place.

"We don't know exactly what they [police] are doing now but they took his hard drives and his computers, and according to him the interrogation went on for about 2 hours and he was then released but he did not get his equipment back," Larsson said.

Egerstad said his lawyer was looking into whether the Swedish police had broken the law by making several "unnecessary actions".

"They aren't giving me any information on who filed the report but said that they have been exchanging information with other countries."

He said he hadn't heard anything from police since the raid but he did not expect to receive the seized equipment back for months, even years.

"[I'm] losing money and trust in my company and even if i'm never charged I will not get any compensation it looks like."

The raid occurred around the same time a feature article on Egerstad's hack appeared in the Next IT section in The Age and The Sydney Morning Herald, but it is unlikely the story sparked the raid.

Patrick Gray, who wrote the article, has published a detailed audio interview with Egerstad, which took place before the raid, on his website

(http://itradio.com.au/security/).

Again, we acknowledge the source, the Sydney Morning Herald which is available for net users from:

and http://www.smh.com.au/news/security/police-raid-hacker-of-the-year/2007/11/15/1194766821481.html

Now onto PoSW's excellent stuff:

Items of Interest from the Media:- Colossus returns;- several papers reported on 16-November the news that a fully working reconstruction of the computer named Colossus, used during the Second World War to break enemy intercepted encrypted messaages, is now up and running. The Daily Mail in a piece by Paul Harris headlined, "The computer that won the war", said, "More than 60 years have passed since it last saw action in the titanic struggle against the Nazis. But yesterday, Colossus - the code-breaking computer that helped turn the course of the Second World War - was back in business. Hundreds of radio-style valves glowed red, ticker-tape sped through reels at lightning speed and, after decades of silence, the machine's whirring and clattering resumed. Thanks to a remarkable effort, the world's first programmable digital computer is once again in full working order......Colossus -about the size of a shed and occupying half a room - takes pride of place at Bletchley, the wartime code breaking centre that is now home to the fledgling National Museum of Computing. Colossus's speed and reliability depends on the hand-built intricacy of its components and the genius of those who designed and programmed it. Before it was invented, secret messages were taking up to six weeks to decipher, by which time the information was usually worthless.....So secret was the technology that Churchill ordered that the Colossus machines be taken apart at the end of the war. Their existence was publicly revealed only when Official Secrets Act restrictions were lifted 30 years later. Engineers who worked on the original project were so proud of the all-British achievement, however, that they illegally kept their plans and circuit diagrams. Those papers were used, in conjunction with a set of 1945 photographs, to rebuild Colossus".

"MI5 warns British firms over China's internet spying", is the headline over a piece by Sophie Bortland in *The Daily Telegraph* of 1-December and says, "The Government has accused China of carrying out an internet spying campaign against vital parts of the economy, it was reported last night. The head of MI5 sent a letter to more than 300 senior executives at banks, accountants and legal firms earlier this week warning them of a web-based attack from Chinese state organisations. The letter warns that British firms doing business in China are being targeted by the Chinese Army, which is using the internet to steal confidential information to benifit Chinese companies. It is believed to be the first time the Government has directly accused China of involvement in such tactics and could cast a shadow over Gordon Brown's visit to the country in the new year. A summary of the letter, signed by Jonathan Evans, the director-General of MI5 was posted earlier this wek on the website of the Centre of the Protection of the National Infrafacture, an organisation charged with protecting the country's computer systems. It says, "The contents of the letter highlight the following: the director-general's concerns about the possible damage to UK business resulting from electronic attack sponsored by Chinese state organisations, and the fact that the attacks are designed to defeat best practice IT security systems.'....It is suspected that Chinese organisations may have created special software designed to hack into the network of a company and feed back confidential information. Last night, no one from the Chinese embassy in London was available for comment."

Communications still not fit for purpose on London's underground system, according to a short article by George Whelan in the *Daily Express* of 19-November. "999 staff still lacking radios 20 years after King's Cross horror", is the headline and says, "Emergency workers still don't have radios that can work underground 20 years after the King's Cross tube disaster. The introduction of the radios was a key recommendation of the inquiry into the devastating fire, which killed 31 people and injured 60. And the importance of such technology was also highlighted by the report into the July 7 bombings in 2005. But on the 20th anniversary of the tragedy yesterday it emerged that a 999 digital radio network for underground use is not expected to be ready until the end of 2008. Sir Desmond Fennell, who chaired the inquiry into the King's Cross disaster, condemned the lack of action. He said, 'If the Americans can communicate with a man on the moon, then it seems extraordinary that the Brits cannot get a system going down to people 20 yards beneath the surface.'.....John Healy, minister for local government, admitted the new radio system would not be in place until next year. He said, 'Many lessons have been learned since the tragedy of the King's Cross fire 20 years ago. The Government is investing £1billion to give the fire and rescue service the equipment and resilience that it needs' A special ceremony was held at the station in London yesterday to pay tribute to the victims of the fire on November 18 1987. The inferno, which remains one of the worst disasters in British transport history, was sparked by a discarded match that set a wooden escalator alight."

Ex-MI5 chief's choice of music made public:- BBC Radio 4's "Desert Island Discs" programme, in which an invited guest chooses the eight records they would take with them if they were to be stranded on a desert island, had as its interviewee on 18-November the former head of MI5, Dame Eliza Manningham-Buller. The show takes the form of an interview with a pause every now and then while one of the chosen records is played. The Noble Lady's selection was mainly of the classical variety including works by Bach, Mozart, Schubert and Beethoven, which didn't do much for this old Essex Boy! However, one number which was totally out of sync with the others was "Street Fighting Man", by the Rolling Stones. Bit of a surprise, that was; I have heard it said that the song was inspired by the Paris student protests of 1968 and indeed, the rhythm of the opening words, "Ev'r-y where-I hear-the sound-of mar-ching charg-ing feet boy" imitates the two-tone siren of a French police vehicle and conjures up an image of a van load of Gendarmes coming down the road and getting ready to knock seven colours of merde out of the assembled protesters. Unusual choice for someone who once headed an organisation whose tasks include, allegedly, the planting of agents provocateurs inside dissident entities in order to foment violent behaviour and so discredit them in the eyes of the public.

"The place of cosmetics in global political and military history" might make a snappy title for someone's thesis; I can offer two examples to get things started. First, the video released by Osama Bin Laden on the anniversary of 9/11 in which he voiced his usual contempt of the West in general and the USA in particular. Several commentators noted how dark and luxuriant The Sheik's beard appeared to be, it having been observed to be streaked with grey in earlier video images. It was suggested he had been using some kind of artificial colouring agent to make his beard darker, since in his culture a man's status is enhanced the darker his beard. So;- is there a branch of Boots the Chemists up there in the Tora Bora caves, and do they have ample stocks of Grecian 2000? I think we should be told!

And then there is the TV commercial which has been running for some time which stars the Hollywood actress Jane Fonda in true mutton-dressed-as-lamb mode singing the praises of some variety of face cream which irons out her wrinkles such that no one would ever believe she was, well, however old she is. So this will be the artiste formerly known as "Hanoi Jane", then, who showed up in the North Vietnamese capital in the late 60's as her personal protest against the Vietnam war. The film of her visit to Hanoi turns up in TV documentaries every once in a while. The image is of Ms Fonda sitting in the operator's seat of a North Vietnamese light anti-aircraft gun, seemingly almost having an orgasm while a couple of NVA soldiers watch with bemused expressions, not quite knowing what to make of it all. Looking at it now, it does seem to be a disgraceful way to behave; it is one thing to be vehemently opposed to one's Government's foreign policy but entirely another to go to the enemy's capital city and be filmed with a weapon which may have actually been used to kill some of her countrymen who probably didn't want to be there anyway but had no choice because they were drafted.

Thought provoking drama on TV:- Channel 4 TV showed, over two evenings, 31-October and 1-November a drama entitled "Britz" reflecting the times in which we live. As the blurb in the *Radio Times* puts it, "...the story of a British-born Muslim brother and sister who are pulled in radically different directions by conflicting experiences after the attacks of 9/11. Successful undergraduate Sohail, born and bred in Bradford, is eager to play a part in his country's national security. When he signs up with MI5 and begins an investigation into a terrorist cell linked to the London bombers, it leads him back to his home town community". And the second episode, "The focus switches to Sohail's sister Nasima, a medical student in Leeds, who has grown frustrated by the British government's policies which target her Muslim neighbours and peers." I find it difficult to sit and watch these long drawn out dramas, especially on a week day since there is always some other call on one's time, but what I saw of this was better than the usual TV offering. The portrayal of the young Muslim woman becoming increasingly radicalised was very well done, leading up to her suicide mission which involved her packing herself with home-made explosives and setting them off at an open-air concert. At the very end came the video which she had made before setting off on her mission in which she made the point that the people of this country had brought all of this on themselves by constantly voting for politicians who set out to wage war in Muslim lands. Very true, I'm sure but since both the main parties have pretty much the same policy with regards to the Middle East it is hard to see how it could be otherwise.

The BBC have been showing an intelligence related drama too, an import from the USA called "The Company" - the name by which the Central Intelligence Agency is known - and shown over three Saturdays in late November and early December on BBC2 TV. I was only able to watch the second episode on 1-December which covered the 1956 Hungarian uprising and the 1961 invasion of Cuba. I thought both events were very well done with realistic scenes of street fighting in Budapest, complete with a T34 tank - it's amazing what you can buy in a government surplus store! - and the beach landing in Cuba at the Bay of Pigs by anti-Castro Cubans based in the USA, a plan hatched up by the CIA but which the American government did not want to be seen to be supporting and so would not commit regular US forces. The aircraft used by the invasion force were not up-to-date jets but piston engined types of almost World War 2 vintage. There was a slight British connection with this historical event; there were several references to the invaders coming under attack from Castro's "Sea Furies". The Hawker Sea Fury was one of Britain's last piston engine, propeller driven fighters, equipped with 20mm cannon and originally intended for flying off the decks of Royal Navy aircraft carriers. Soon rendered obsolete by the jet engine they were sold off to other countries and a few of them eventually showed up in Cuba where the appear to have served Mr Castro very well.

Number station pioneer writing to the newspapers? The letters page of the *Daily Express* of 13-December contained a contribution from one, Simon Mason of Yorkshire. Is this, I wonder, *the* Simon Mason, author of the book entitled, "Secret Signals, The Euro Numbers Mystery", yep. I've still got my copy! Published in 1991 by Tiare Publications This was a useful reference work for followers of the numbers station scene before E2K came into existence. Mr Mason's letter is a comment on an ongoing discussion on traffic congestion in which he informs the readers that he clocks up at least 25 miles a day by bicycle in all manner of weather. Ye Gods! I use a bicycle myself from time to time but I don't think I could manage that sort of distance!

New war coming to Europe soon? The recent news reports from Serbia concerning the announced intention of the Kosovan Albanians to declare themselves an independent nation have raised fears of a new Balkans war in early 2008 since the Serbs oppose the move and may use military force to prevent it. Kosovan independance is supported by the EU and the USA, a continuation of the policy of breaking up the former Federation of Yugoslavia into its component parts. A war in the Balkans would be likely to draw in NATO in support of the Kosovan Albanians and the Russians would almost certainly offer their support to their fellow Slavs in Serbia. So plenty of scope for trouble there, then. However, the latest word is a proposal that if the Serbs and the Kosovan Albanians settle their differences peacefully, both will be rewarded by being fast-tracked into the EU and NATO. So that's all right then! Two more bankrupt, basket case economies to be supported for years by the EU which, in practice, means the British, Dutch and German taxpayer, since these three nations are the biggest net contributers to EU funds. Two more nations with a gangster/warlord culture whose populations will, under the EU's Free Movement of Peoples rules be able to make their way to the UK and add to the general mayhem which now goes on all over the country as criminals from Eastern Europe tighten their grip on the drugs, vice and people smuggling rackets seemingly with impunity. I think I'd rather see them go to war with each other! And we might hear some number station radio traffic in Serbian and Albanian!

Some time ago I had a bit of a rant about the "Compact fluorescent" light bulbs which, it now seems, are going to be the only ones available soon as the old, less efficient in terms of light output, tungsten filament variety are about to be made illegal in the name of fighting "Global warming", that catch-all expression which enables the politicians to tighten their control over us to an ever increasing degree. The problem with compact fluorescents from the radio point of view is the high level of RF interference produced by their electronic ballasts. So some of us have for quite a while been quietly buying quantities of tungsten filament lamps and hoarding them away for use when they are no longer available in the shops. And so too, although for different reasons, and he has left it a bit late, has *Mail on Sunday* columnist Peter Hitchens as he says in the *Mail* of 25-November:- "Last week I began to stockpile old-fashioned high-energy light bulbs. I suspect that it will not be long before they begin to disappear from the shops, and I have no intention of being forced to use the horrible, glaring low-energy bulbs that we are being ordered to employ. I don't believe in man-made global warming and nor, obviously, do the Government or they would be building dozens of nuclear power stations as fast as they could, they would never travel by aeroplane and they would scrap the huge Government car fleet. They prefer to make life miserable for us, so as to look good."

Tungsten filament lamps are, at the time of writing, still on sale in branches of F. W. Woolworth although many other retailers have already stopped selling them, as have the well known building materials suppliers Screwfix Direct; they were still selling filament lamps earlier in 2007 but they proudly anounce in their current catalogue that they no longer stock them. I purchased a quantity of 60 and 100 watt bulbs from Screwfix about a year ago and was surprised to find that although they carried the trade mark of the American General Electric Company they were made in Hungary. Looks like GE must have bought up the former October Revolution lightbulb factory in Budapest!

The filament lamp has been around for a long time; from my local paper, *The Cambridge Evening News* of 1-October in the "On this day" column, comes not only "1918: Arab forces under Emir Faisal, and including British officer TE Lawrence, captured Damascus from the Turks", but also, "1880: The Edison Lamp Works began operations in New Jersey to manufacture the first electric light bulbs"

Spooky or what? Sometimes things happen that make me wonder if there is some kind of force at work in the world which cannot be explained by rational means. In the last newsletter I made a reference to an item in the local news, an ordinary house which had been turned into a cannabis growing enterprise by its Vietnamese occupants. No sooner had E2K 43 been posted when I opened my copy of the *Mail on Sunday* magazine section, *Live* of 11-November and my eyes beheld an article on the very same subject, also in the county of Cambridgeshire but not the same location. "Welcome to leafy suburbia", is the headline - note the awful pun. "There is no more ordinary home counties house

and, increasingly, no more ordinary secret: a vast marijuana factory tended by a lone Vietnamese gang footsoldier armed with jerrycans of chemicals, three sheets of instructions and a dozen bristling power units wired into the mains". The case reported here was in the town of Peterborough at the other end of the county but the setup is an exact replica, the artifical daylight lamps, the electricity meter bypassed so as to obtain free power, as the the one not too far from me, which was in a village called Linton which won't mean much to anyone unless they poke about inside old Pye radio equipment when they may notice that the quartz crystals and the I.F. filter are likely to be marked, "Cathodeon Crystals, Linton, Cambridge", an establishment which I often used to visit many years ago - now, sadly, no more, long since demolished along with much of Britain's industry.

And the second, rather weird, incident occured around the same time and turns on my observations of the considerable numbers of the surplus population of Eastern Europe, in particular Romania, now resident in my part of the world having entered the UK through Stansted Airport, not too far away. I took a quick listen on the local 2-metre repeater one evening in mid November and heard a mobile amateur relating the story of a relative of his who had just left the Army after several years service in all the usual trouble spots and on making enquiries as to the availability of loacal authority housing was informed that he was entitled to.....nothing. While at the housing office a steady stream of Romanians, just off the plane, were being given three bedroomed houses. To say that the amateur describing the incident was an angry man would be an understatement. I do not think that the politicians, of whichever party, realise the trouble and social unrest which is slowly building up in this country as the result of incidents such as this.

Well, that's enough. It remains only for me to wish you all the best for the festive season and for the New Year.

"0 0 0"

"Peter of Saffron Walden"

Onto the rest from a variety of Sources:

Spooks continues

The BBC continue to cause much mirth at the real Thames House as they unintentionally lampoon the activities of the real MI5 with twaddle not fit for a boy's own style comic.

The saga continues with smarm boy still giving the Iranian Ambassador's wife the run of his loins - because he runs her as an asset, don't you know - only he does so in an MI5 safehouse and without official sanction. He's sussed out by Ice Maiden. As he leaves the safe house he is attacked by some idiot who gets a very nasty bump on the bonce and ends up in hospital.

Whilst all this happening Jo, from the Grid, is being knocked off by some mullutto who happens to be a journalist and who subsequently tries to get a story out of naughty smarm boys pugilistic experience outside the safehouse[note safehouse for this next bit] because he has some footage from the CCTV nearby! It appears that a Russian is bringing in some plans for devices to initiate an atomic explosions - a firing set was the comment used, PLondon and DoK remember them as Thyratrons search valve number, or tube for our American cousins, 2D21. Anyway they lose the Russian, Vladivostock, or whatever his name is and sub-plots break out all over the place.

Turns out the plans for the firing set are deliberately faulty, intended to set back the Iranian bomb attempts decades by the CIA as owned up to by the CIA link man Bob Hogan. Not only that but we also find out that smarm boy's assailant was sent by Hogan to stop him interfering with CIA operations. Well the best bit comes when Sir Harry, aka 'Guv!' asks, 'What about the Special Relationship?' Ben Hogan's reply was memorable to the effect it was discussed on the 0608 train the next day, It was 'There is no Special Relationship. When you're useful you're useful; when your not, you're in the way.' We concluded, just outside Clapham Junction, that this is probably how it is in reality.

Smarm boy ends up in bed yet again with the Ambassador's wife and she poisons him. Short story is that he is paralysed and dumped in a bath to drown only to be sadly saved by Ice Maiden who apparently behind closed doors treats the adulterous binta to the double tap after milking her for more info that suggests Iran really do have a firing set because the other was found to be faulty. Still no word of Zafir Younis, Zaf to his mates, who may well be in Gitmo at the American's pleasure. We'll no doubt find out at the end of the series. Sad if he isn't as the Beeb have removed all the credible characters bar the guv, Sir Harry Pearce. Mind you, Connie who now speaks Russian, is quite credible.

Whilst all this is going on Ice Maiden Roz is placing bugs all over the Grid – whoops! Watch out Paul there's one sitting on your notebook.

Well, no worry because PLondon has just spotted the cheapskate BBC effect for what it was [and it remains in the same class as the nonsensical signal emitting vaccine]. What you have there is a Zener Diode with one leg cut off – ok for Joe Public but not us ENIGMA 2000 operatives, oh no. But there's more FX skulduggery too, as you will soon see. Sack the special effects and continuity I say.

Back to the story, PLondon always watched the offering on BBC3 at 2230 until 2330 and invariably falls asleep meaning he has to watch it again to see what really happens.

In this episode the utterings from the beautiful Ana Bakshi [well, not quite but there was a couple of points PLondon liked about her] have come true. Iran indeed discovered the plans to be duff and have acquired a new set. The duff stuff came from the US – there's a surprise – and there's some one-upmanship natter between Sir Harry and riproaring Ben Hogan in front of an HO/FCO? Minister.

Anyway it appears the true plans, the ones that are Kosher or Halal are flying from LHR [thought it was either Stanstead or City in the airport shots].

Enter Smarm boy as passenger and Ice Maiden and air hostess type untrained trolley dolly. [Would you like ice in that Sir? It's my speciality]. They even tried to put some makeup on her but it didn't look too good; not at all. They get hold of the manifesto and go through the details looking for pax [airport slang for passengers – the FX here are better] who might be the courier and they pick out three.

One, a woman ex from FSB, has a drink emptied over her by Smarm Boy who 'Doesn't know why he just did that;' another bloke has his bag searched by Ice Maiden but the best is saved for Smarm Boy.

He discovers a Yank who gives a less than credible reason for being on the flight and Smarm Boy and him have a punch up, aided by Ice Maiden who tries to strangle/throttle said Yank to assist Smarm Boy who isn't doing too well. Overcome, the American's laptop is opened and searched electronically and physically to reveal nothing.

MI5 get in touch with Turkish Air control who instruct the Aircraft to land at their base due to safety matters – of course this instruction is ignored. MI5 [shouldn't MI6 be getting this action, or at least the SAS/SBS?] have set up a link via the Stewardess' phone and call Ice Maiden. Guess what – erstwhile Malcolm set up a charge on the fuel line so Ice Maiden enables Bluetooth on her moby to detonate. In the ongoing confusion as the O2 masks drop Ice Maiden is knocked out. Unfortunately she is saved by an Iranian pax.

[BTW IRIB radio is now on 6010, 6225 and 7315kHz for English broadcasts – nothing about Spooks though].

The troublesome American, ko'd by Adam Carter aka Smarm Boy unfortunately dies because he can't reach his mask. The plane lands and a walk –by swap of flight case occurs between the pilot and another. Smarn Boy is arrested as Ice Maiden is confused an sitting on a bus. The jeep carrying the flight case holding the real stuff disappears into the sun haze and mirage......

The shots shewing the plane taking off and landing are poor – one is the undercarriage for a completely different plane and they could have done better with an airfix model; my son reckons at least 3 different undercarriages and five wrong angles.

Back in Thames House Counter Espionage are searching high and low for Zener Diodes, some already crushed under a less than fashionable shoe as worn by Roz aka Ice Maiden or chucked out in a coffee cup. Is the coffee cup a Faraday screen then? Will Ice Maiden be caught? Is Yalta anti-West or just anti-American? Who cares?

As the show ends we discover from the scheming CIA head of station, Bob Hogan, that the American pax who died was a CIA operative [no surprise there] who was 'put on the plane just in case Adam Carter cocked up.' Oh dear, this thing is less believable than 'The Adventures of Sarah Jane' as watched by PLondon after having a tooth extracted – the Slitheen characters look more spy orientated than Smarmy and Ice.

Here we are, Episode 7 and this time we have Ana still alive and in another safe house [there must be thousands across London], a new member to the Nuclear club in the shape of Iran thanks to the now delivered triggers and plans and a very disgruntled Ben Hogan. Harry Pearce works out a decent way to circumvent WWIII [the Israelis won't like Iran being nuclear – who really gives a toss what they think?] and it all goes crook as Great Britain, Iran and the US take part in a televised debate surrounding the Iran/US peace deal. Roz [ugh!] discovers the real reason for Yalta's existence is to scupper everything American. Exciting it was too with ex-BNP members – trained soldiers once – hijack and take hostages. Of course Ice Maiden and that smarmy Adam Carter are there to save the day and as the Iranian Ambassador looks as though he's going to be executed the lefty journalist BenKaplan shins up into the lighting gallery and drops a spotlight on the gunman. As he quickly recovers to shoot the diplomat Adam grabs a firearm and pots one into said ex-BNP man's side. Being totally untrained he leaves the bloke there to recover slightly to fire a round into the diplomat. Then Adam does what he should have done after the initial disabling shot and empties a good proportion of the mag into said terror type. [What he should have done was put the tap shot into the head as soon as the man was down aka the 'Stockwell Technique.']. Ana, still alive is being sent to Canada and that goes crook as the Transit Team are cancelled and sinister elements attempt to take their place. In comes Smarmy and Ice at the right time – bags of knocking over sinister elements, one going though a parked car's windscreen for a bit of excitement too. They end up having a snog with doubtless other pleasures later. Not a bad episode and there's promises of an MI5 officer curling their toes – Roz? With a bit of luck.

Episode 8 starts with the aftermath of Roz and Adams coupling – it's rank – and then ice maiden sees Margitte who is wetting herself with fear because Bob Hogan, the CIA geezer is about topping Yalta agents. The Grid find out that Ice Maiden/Roz is a Yalta agent and she tries to get out of it. Using radio techniques Ros is followed to Yalta HQ where she is eventually topped [hooray]. The plot from Yalta is that they will be shutting down all satellites to take away intel from the US to stop their prosecution of a war against Iran. [Funnily the IRIB was broadcasting details of a long range missile, new battlefield ordnance and a new submarine in its news round up]. Anyway, Sir Harry, Smarm boy and Malcolm sort the signals out and stop the shut down, bringing almost 100% service back to life, getting thanks from Bob Hogan. BH is sorry about the loss of the MI5 officer [we're not!] and at the funeral actually opens the coffin to check the stiff is a stiff. After he has gone Smarm boy administers an antidote for whatever put her into a deep sleep and she comes round. As the coffin is interred you get to see a shot of Ice maiden walking away, partially shrouded by gravestones, until she simply disappears. My Mrs added, really good in MI5 now, they can actually beam up the redundant officers. The reason that Bob Hogan took an interest in Ice maiden was because whilst readying himself to shoot the munting creature 'Margitte' he was set about with an asp and when stunned was CS sprayed by Roz. All total cobblers.

Of course with Roz out of the way [thank you BBC!] a new story line appears. Now we have some ex-IRA/PIRA or some other anti-HM Irish faction contracted to top Sir Harry and his merry band – and the journo Ben Kaplan. Well, he doesn't get to do it. Smarm boy has apparently become disappointed with 5 and starts to spill the beans to Kaplan and the Iranian Ambassador also has Smarm type under surveillance too. Well it's a long story and Ben Hogan has a hand in saving the day [thanks U Sam] but the storyline is somewhat nonsense. Smarmy tries to defuse a bomb by cutting the 'red' wire whilst its command signal – by radio – is jammed by the usual box of tricks. Lots of running about and rounds being let off by the 'ex-IRA/PIRA or some other anti-HM Irish faction' with a ponytail but he's eventually taken out by Jo [she does look a bit like a bloke with that short hair] who welts his bread basket with a handy bit of scaffold pipe that happens to be near whilst he throttles her; his familiar is 'extinguished' by Kaplan courtesy of Mr Pyrene across the nut also. And where does Kaplan [doubtless to end up in 5] meet Sir Harry? At Waterloo station! There's two pubs quite near that would have been handy if it was for real though. Watch this column for the last exciting episode..........

Well the sad thing is I fell asleep in it and can't be bothered to watch the recording. Basically the bunch of merecenaries that captured Zaf were working for the Americans and they went out on a limb to make some representation because it came out that the Brits were manipulated by the US [it's nothing new, especially with past useless PM Bliar nodding his head to every US wish list ©] and they decide to get hold of Smarm boy and ex-journo, now MI5 operative Jo – she's the one whose eyes bulge like a dogs testes. This is what happens and as the SO19 boys charge in to the place of detention Smarmy tops Jo to stop her falling into the hands of their captors for the purpose of knowledge extraction. It's left ready for another laugh a minute depiction of MI5 in a year's time, minus Jo, Ros and Zaf. With a bit of luck Smarm boy will get a contract for films and not be seen again. To the writers: Make it credible and use actors who don't look as they used to do the Brylcreem ads or played the before part in the Sunsilk/plastic surgery ads with no make up.

IDF major charged over attempt to spy for Iran, Hamas, Russia By Ofra Eidelman, Haaretz Correspondent

http://www.haaretz.com/hasen/spages/927420.html

Tel Aviv District Court on Friday indicted a major in the Israel Defense Forces reserves over espionage charges for offering information to Iran, Russia and Hamas.

David Shamir, a psychiatric doctor, confessed to the charges which also stated he asked for money in return for his services.

Shamir was arrested by the Shin Bet security service forces and the police's international crime and investigations unit on November 14.

The doctor did not succeed in passing any sensitive information onto the sources with whom he had contact. Police said his motivation was "a kind of greed." Classified documents were found at his house, as well as records of his attempts to contact hostile sources, and a small amount of drugs.

According to the indictment, Shamir, 45, was exposed to classified information during his service as an IDF reservist, including the Medical Corps' emergency plans, the manner of IDF medical teams' deployment, the situation of their command centers and programs for evacuating civilians during missile attacks.

Shamir allegedly made contact with the Iranian Foreign Ministry in April 2007, offering his services as an Israeli officer and civilian.

In August 2007, Shamir reportedly sent faxes from his home in Israel to Iranian Consulates in London and Turkey, again offering his assistance to Iran. Shamir received no response and again offered his services in October 2007.

The indictment states that Shamir contacted the Hamas-run Al-Azhar University in Gaza this past November and expressed his desire "to take part in the struggle."

Shamir also allegedly contacted the Russian intelligence service FSB, and inquired about the recruitment process for spies, expressing his desire to serve the organization.

Shamir has been charged with contacting a foreign agent and obstruction of justice.

Shamir's defense attorney, Amnon Shaltiel, said he would not respond before he had read the indictment and the investigation findings. The court accepted Shaltiel's petition to postpone the reading of the indictment until December 5, at which date it will hold a further hearing on the state's request to extend Shamir's remand.

MI6 Mission?

Those of you about in 1956 will know about Buster Crabb, not the American Olympic swimmer and actor but rather Commander Lionel Crabb GM, a renowned frogman.

Cmndr Crabb went missing after going on a mission under the Russian Cruiser Ordzhonikidze whilst docked in Portsmouth harbour having conveyed Nikita Kruschev to Britain. A headless body was later washed up on the Sussex shore 14 months later.

Rumour suggested that Crabb, 47 years old, overweight, heavy smoker and a drinker, was on a secret mission for MI6 [why MI6?], others suggested he had defected or was simply recruited by Blunt and later murdered. Sir Anthony Eden, the then PM when questioned in the Commons compounded the mystery by stating that any disclosure of the circumstances surrounding Crabb's death would "not be in the public interest."

At inquest the coroner was unable to determine a cause of death adding even more fuel to the fire of rumour; beheaded by the propellor of the Ordzhonikidze, or simply brainwashed, murdered and suchlike.

However a former MI6 officer involved in the operation claimed that Crabb had merely died of respiratory trouble, either because of his health or because his equipment developed a fault.

Now, 51 years later, a RussianEduard Koltsov, came forward to say that as a Russian frogman he slipped into the water at Pompey and seeing the silhouette of a diver fixing something to the ships hull said he killed Crabb by slitting his throat. The knife he used was also shown to documentary makers. What is interesting is that Ian Fleming knew Buster Crabb and is said to have used him as a model for James Bond. Whether he did, or not it is known that

Fleming used the incident as inspiration for scenes in Thunderball where Bond inspects the hull of the villian, Largo's, vessel the Disco Volante. [I'll bet Crabb never discovered women quite like Martine Beswick and Luciano Paluzzi either].

Thunderball is about the highjacking of a Vulcan Bomber for its payload. One of the crew in the film who is seen eating a sarni during the pre-hijack scene was known to PLondon. [Thanks to E who sent a cutting in].

Aden

Forty years ago the Brits abandoned the Crown Colony of Aden, a port in the Red Sea, originally used for coaling. It was also a handy military post. Civil servants saw it as an easy posting and it really was an idyllic place with its one fertile area, Sheikh Othman, and beach clubs such as Gold Mohr, Lido Elephant bay and the Mermaid club. Liners used to heave to in Steamer Point and the sleek lines of P&O ships were to be seen as were the red and black funnels of Castle Line ships.

Passengers who came ashore were treated to bargains from stalls and the currency was the east African shilling; 20shillings to the pound, 100 cents to the shilling. The 10 cent piece was the same size as an old penny and had a hole through its centre whilst the 50cent piece was the same as our old sixpence. Goods were bought virtually free of tax. Sights were the dominating mountain Shamsan, which if you didn't climb it you would, it is rumoured, return to Aden again. Well, I climbed it and I have the constant urge to return and one day I seriously hope to. There was also the refinery in Little Aden whose flame was a dominating and memorable sight as were the Salt Pans and peculiar sailed windmills, the Twaala Tanks, said to have been built by the Phoenicians, and the Asses' Ear Reservoir with its sides bleached white from the sun. There was also the qat market on a Friday situated near to the Crater by Pass.

Well, it all went wrong for us. The political factions were FLOSY, Front for the Liberation Of South Yemen and the NLF, National Liberation Front. They took action against British forces and basically drove us out, leaving our dead behind in a military cemetery at Silent Valley. It is respectfully maintained and visited by persons I know to this day. British civilians carried firearms openly during the state of emergency which existed towards the end with ladies favouring the 9mm Sterling Machine Gun SMG. Bet they had fun stripping and cleaning it with the working parts flying across the room as the end cap was removed. The last Governor, and there is no better sight to be seen than HM's Governor taking the salute on the Queen's birthday clad in his ceremonial uniform and feathered tricorn hat, was Sir Kennedy Trevaskis. His last act was to walk briskly up the steps into a waiting aircraft followed by his Special Branch body guard walking backwards and wielding a pistol menacingly as the band played 'Fings ain't what they used to be' whilst leaving a skeleton diplomatic staff at the Crescent Hotel. The Br

You can read an account of a return to Aden at: http://news.bbc.co.uk/2/hi/programmes/from_our_own_correspondent/7120629.stm

In this piece, Brian Barron infers that Arab women were not veiled whilst the Brits were there; but that is so untrue as the Chador was the order of the day and western dress was, for the great majority of the Arab ladies, a no-no. I listened to the podcast expecting to hear original reports, the sounds of Aden [the smells of Aden were something never to be forgotten too] but basically Brian Barron really read out what you are about to read if you have opened the URL. No authenticating sounds of Aden Arabic, no calling to those coming ashore at Steamer Point; nothing. It took him around 6 mins to read out the piece which invoked some past memories of a place where I was happy, where I enjoyed something unique and which was to end with a very deep sadness that has continually affected me to this day, Aden is a place I think about often.

The British learnt a lot in Aden about engaging the Arab in warfare - you can't win - so why on earth did Blair allow us to enter Iraq where, like Aden, we will never militarily recover?

For the philatelists amongst our ranks! [And Her Majesty looks younger too]

Any person who wishes to know more about Aden, the politics and military action can read excellent accounts by searching 'Britain's Small Wars.' I must state that the feelings which I have for Aden are not shared by one other ENIGMA 2000 member who has been there [there are four of us in Group] and I apologise for my enthusiasm for those memories to that person with whom I share so much in common and to whom those memories are not quite so pleasant. Thanks to the three members who sent me details of the BBC broadcast.

Recently I was able to locate the house where we lived in Maa'alla on Google Earth as well as the club Gold Mohur, where we used to swim in the afternoon, generating memories of chip rolls, racing hermit crabs, 'Stim,' 8mm movie cameras, the Opel Rekordall part of the most memorable part of my life.

The image of the left is the antenna atop the Sudanese Embassy in Cleveland Row junc with Ross Court London W1

Look at that paint work on the almost wooden window frames!

The Sudan is a fair sized African Country with a mid-2007 population cited as 39,992,490. Trade wise it has a few obvious wanted items, copper, cotton, oil being some of them.

Its legal system is based on English Law but also Sharia law with 95% of the population following Islam, one way or another.

The Christian population is mainly in Khartoum, another place PLondon has been to twice and where General Gordon, aka Gordon of Khartoum excelled himself militarily by massacring the Mahdi's forces and letting his own side play football with the Mahdi's head. Not very PC that.

PLondon recalls that he was in the gents in the airport having a leak when he was struck in the small of his back by the biggest black lady he had ever seen. She wore a pink blouse and matching skirt with something tied around her head. "Cigarette, Cigarette Sahib.... And the waving extended hand. All this whilst taking a leak. "Clear off!" in English brought no joy, but "Imshe! Yallah!" shouted as an order as PLondon turned from the urinal [and that was more than a bit ripe too] did; the obese bint buggering off big time as PLondon adjusted his dress. That occurred when yours truly was flying home from Aden.

The reason that this has come to mention is because of the female teacher. Mrs Gibbons, who foolishly named a teddy bear. Mohammed. As we all know it's

The reason that this has come to mention is because of the female teacher, Mrs Gibbons, who foolishly named a teddy bear, Mohammed. As we all know it's 'let's knock Britain season worldwide' and Sudan seems to have jumped on the bandwagon big-time.

If I was travelling there I would have researched the country, its religion and culture prior to going. Once there I would have sought advice from the British Embassy on the current political and religious climate.

Well, it would appear that our highly trained and qualified Liverpudlian teacher [must have a degree] may not have done these things but then again you'd think that the Deputy Principal (Lower School) Mr Tony Denford or at least some of the support staff would have the forethought to kindly mention certain facts into Mrs Gibbons 'shell like' about things it's not best to do.

The blurb for the Unity High School Khartoum [the British International School in Sudan] states "Unity High School aims to provide all its students, whatever their gender, nationality, religion or ethnic origin, with an education of the highest quality. Emphasis is placed on enhancing and developing potential whilst encouraging self discipline and mutual respect. Above all, the School aims to lay the foundation for each individual to enjoy further study and to achieve a happy and successful life."

That's a super statement and the staff must be proud to work for such an organisation under the gaze of Mr Peter Boulos, the School Director. As we all know Mrs Gibbons' simple mistake has led to her appearance in Court and receiving 15 days gaol and deportation. Well there's also a major diplomatic row blowing up. I have personally seen Sudan's Ambassador Omar Mohammed Siddig being driven down St James' Street in his Merc VRM: SUD 1 looking a bit grim.

We were treated to snippets of news, and lots of speculation, 40 lashes, death and such, but it took the free paper Metro, dtd 30112007 to disclose the facts: "Mrs Gibbons, who left Liverpool earlier this year to teach in Africa, was arrested after her class of seven year olds voted to name the bear Mohammed. The school secretary [in actual fact Lower School Secretary] Sarah Khawad, complained to the authorities that it was an insult to Islam's prophet."

The Lower School Secretary

There were chaotic scenes as Mrs Gibbons entered Court for her trial. Outside an offender was allegedly being whipped for his transgressions and media and school colleagues were banned from attending. Add to this the reported fact that Mrs Gibbons' lawyer Kamal Djizouri was almost prevented from entering Court by police and you have an idea of the fair treatment that Mrs Gibbons received.

Papers in Britain, and elsewhere had predicted 40 lashes, death and the odd riot too, but Mrs Gibbons received 15 days imprisonment for her transgression against Islam, to be followed by deportation.

Remember that a class of seven year olds had voted to name a bear Mohammed. What would have happened if they had named it Jesus; would the 5% Christians risen up in protest followed by a hasty riot or two and a quick crucifixion?

Dave the Kiwi said, "The Lower School Secretary mentioned by the Metro newspaper as dropping Mrs Gibbons in the mire has a Christian name – yet she felt offended enough to report the teacher to the authorities! What duplicity.

Well, if I was the British ambassador I'd want to know what is really going on – I personally reckon there had been words between the two women and this was payback time with the report to the Director of Education that went wrong. There's nothing quite like the sikkin [knife] being placed between the shoulder blades from a colleague, wherever you work but you need to know the full outcome – think beyond the boarders of your actions."

The head of the Muslim Council of Britain called the decision from the Court 'a gross reaction from Sudanese authorities.'

Whilst the Sudanese ambassador, Omar Mohammed Siddig, was treated to an appearance in front of the Foreign Secretary Mr David Milliband to hear Milliband's concerns *before* the verdict the general population in Britain is disappointed *after* the event.

The best remark in all this comes from Mr Peter Boulos, the School Director, who stated [Metro 30112007] after the verdict, "We are happy with the verdict. It is fair. There were a lot of political pressures and attention." [Perhaps Mrs Gibbons said 'Thanks, mate!' It's always nice to be supported by management and at least the school won't close with Peter Boulos losing his job too]!

Liverpool Riverside MP Louise Ellman said many people would still feel 'distress and anger' at the verdict.

Dead right ma'am, so much that any sighting of Sudanese diplomatic cars may cause strange hand signals to be waved to the occupants from passing offended individuals and pedestrians.

Perhaps a few deportations from Britain of unwanted Sudanese might make the point too. [All the Sudanese I have met are in employment and very helpful and polite persons so that might not be possible].

The days are gone when Britain backs its overseas citizens with HMS Bulwark turning up in places foreign and flying a few helos supported by Hunters about but all that needed to be done was an apology from Mrs Gibbons backed by the Ambassador – but this current situation is no good to Britain, Sudan or Islam.

Wonder if the Lower School Secretary will get the tin-tack for this? Looking at the picture above she doesn't seem to dress in an accepted manner for such a religious person liable to be offended by a naïve and unfortunate mistake from a colleague that could have been dealt with internally.

Mr Peter Boulos, School Director

Britain sent two Peers, Lord Ahmed [Labour] and Baroness Warsi [Conservative] to negotiate a suitable end to this matter. As a result, after a meeting with Sudan's President the hapless teacher Gillian Gibbons was freed into the care of British Embassy staff after being given a pardon and flown home. The Sudan is known not to be anti-British in any way and this matter needs to be sorted out and analysed to ensure nothing of its kind occurs again either in the Sudan or elsewhere.

Anyone note on the newscasts that the mains sockets and plugtops in Khartoum are UK style 13A square pin? Wonder if they use 16th edn? Perhaps Lord Ahmed and Baroness Warsi arranged for a job lot of Plugs, Sockets, Pattress, bayonet holders and a few thousand metres of twin and earth in exchange for clemency toward Mrs Gibbons ©

Deadly Precision: Snipers Get New Longer Range Rifles

Deadly Precision: Snipers Get New Longer Range Rifles

By URL of this article:

http://www.defencetalk.com/news/publish/index.php

Nov 19, 2007

Snipers in the Army, Royal Marines and RAF Regiment are to get a new rifle that will give them lethal precision at even greater distances under a £4M contract announced today.

The British firm Accuracy International Ltd will supply 580 rifles with day telescopic sights for snipers across the services, which will fire a larger calibre bullet than the existing weapon.

The new rifle is being supplied as part of a broader Sniper System Improvement (SSI) programme to give UK snipers more power, precision and stealth than ever before. All-weather new advanced day and night sights will mean snipers can operate round the clock in difficult conditions, and laser technology will allow distant targets to be accurately located.

Baroness Taylor, Minister for Defence Equipment and Support said:

"We are committed to providing our troops on the front line with the equipment they need.

The L115A3 Long Range Rifle

"Military snipers provide vital capability on operations, defeating the enemy and protecting our troops on the ground. In response to feedback from operations we are investing in new sniper equipment. The first contract is for the new longer range rifle and day sight, and we expect to start taking deliveries of this kit early next year."

Training units will familiarise themselves with the weapon and how it works with other parts of the sniper system. The rifle is due to be ready for operational use next spring.

Background Information

- 1. Accuracy International Ltd is based in Portsmouth
- 2. Day sights are manufactured by Schmidt & Bender
- 3. Other elements of the Sniper System Improvement programme include night sights, spotting scopes, laser range finders and tripods, and will be sourced from a variety of suppliers taking the total procurement value to over £11 million.

SNIPER RIFLE: Long Range Rifle L115A3

-- Calibre: 8.59mm -- Weight: 6.8kg -- Length: 1300mm -- Muzzle velocity: 936m/s -- Feed: 5-round box

-- Effective range: 1100m plus

BBC Radio 4 Spooks programme

On Tuesday 4th December BBC Radio 4 broadcast the first part of Gordon Corera's 'The Real Spooks,' Trench Warfare. The title apparently coming from Dame Eliza Mannigham-Buller who made a remark concerning MI5's position during a terror attack. There were interviews with the mysterious Mrs C, otherwise Dame Stella Rimmington and bit read off the MI5 website. There was also an interview with an MI5 agent [not an officer, who is actually employed by MI5 and who does not murder] who seems to be working amongst Muslims listening for something of interest. This claimed agent was interviewed by Gordon Corera after being shuttled there in a blacked out van whose driver made moves to prevent their being followed. The resultant interview was en clair questions from Corera and an electronically changed voice that was so poor an actor had to speak the words. [Echoes of Gerry Adams here it would seem].

David Blunkett was interviewed over the matter of warrants for eavesdropping and other invasive evidence gathering techniques as well as his input in to Operation Crevice which resulted in the arrest of nine persons and the conviction of five in this Country.

There was also mention of 9/11 including that the only plane to fly into the US immediately after the event carried the heads of our secret service. In two parts, the next part 'What We Feared' was broadcast on Tuesday 11 December 2007 20:00-20:40 (Radio 4 FM). Luckily, as in the first part PLondon's Bug DAB radio was set to suck the signals in and record it to card.

'What we feared' was equally as good as the first part and it explored the relationship between MI5 and the police, in fact a good proportion of the programme was actually spent labouring this point above all others. Strange that 'waterboarding' was mentioned. Now the world will think it's an American invention, but the sad truth is it is British and was carried out on dissidents during the NI conflict.

All in all a good series, committed to CD and placed in the E2k library.

Cold War dial twiddling:

Tazer and the Met

London's Met police issue a few more Tazers to the TSG [reliably told 'Thick and Stupid Group' but I don't believe it] and all the lefty idiots start to harp on about it

What's the MPA's Cindy Butts on about – where did they get all these people in the MPA from anyway – never worn blue but they get to influence how the police do their most difficult job? Don't like the idea of Tazers Cindy? Take a look at this:

Now that's a Taser Ms Butts!

for more info.

London Lite 07/12

Metro July 2007

It's happened again [is there no end to these continual cock ups?]

Laptop goes MIA from Westminster

From theregister.co.uk

A laptop containing information about Parliament's security systems disappeared from, er, the department responsible for Parliament's security last week, claims the Daily Telegraph. According to the paper, the machine belonged to an official working for the Serjeant at Arms, and disappeared from inside the parliamentary estate ...

And who remembers the case of the 'lost tosh' from yesteryear.....?

SUBSTANTIAL REWARD

Academic urgently seeks information leading to the recovery of Phd vital research notes stored on Toshiba 4000 Series CDS laptop computer in black carrying case lost in London on evening 3 March 60.

Please call 0171 245 Consuled

Note: Phone numbered censored to stop reckless use.

And on a lighter note...... Mucky Major's a sex swinger

HJH E2KWATCH (JAN)

First up, and just to prove that this bleary eyed old hack ain't TOO out of touch with all the local and latest Snafus (Ask an American if you don't know!!!) here is a gem picked up from El Reg, the good old REGISTER, that watchdog of the cyber waves. First up, not to be out done by the bumbling ineptitude of the DVLC and Department of Employment losing data belonging to the citizens of this benighted land, a laptop has gone AWOL from no less a location than the office of the Sarjeant at Arms in the Houses of Parliament. These are the guys who do what passes for security in the Palace of Fun in Westminster. More correctly, it has been lost by an official working for that office. It is known to contain information about the security systems (such as they are!) which protect "the Mother of All Parliaments". (I think they mean ours!) No worse time for this laptop to go walkabout can be imagined, as it coincides with the introduction of a new security pass system for the Houses of Parliament. One aspect of this "new" system is that it will automatically invalidate ALL old lost passes. I hate to disillusion our Westminster SWAT team but this kind of facility has been a standard aspect of ALL systems in use on high security or areas of sensitivity. (Aviation sites and the like) These however, are in the PRIVATE sector, so why, pray, is the seat of government ("seat" is just another word for "arse") only just now being protected by this most basic and common sense of security features. Sadly, another item of information on this 'ere laptop is that which covers aspects of access control. (What there is of it! Batman rides again!!!) On reflection, all may not be lost. If this new system is as Mickey Duck as some government department security with which THIS author has had truck, then it could be that the laptop has more resale value than the information contained therein!!!

WHAT GALILEO DID NEXT!

It seems as though the ongoing saga of the projected Euro sat Galileo is set to outrun the trial of its namesake Galileo Galilei, before the Inquisition in 1633. For a bird which received the green light for "GO" as far back as December 2004, it sure is taking its own cotton pickin' time to get into Earth orbit! Projected cost then (Source: Lucy Sherriff of "The Register".) At the time that this GPS bird's wildly optimistic time off the launch pad was touted by Jacques Barrot EU Commission vice president, in December 2004, it was hailed by Mr Barrot as "an example of what Europeans working together could achieve." (Last time that happened was 39 – 45, and that took 6 years to sort out if this old memory serves.).

Various delays have been blamed upon network specifications, funding, (try blaming THAT on the CAP!!!) and anxiety that a third party would access its navigation and/or surveillance system in time of war/conflict to locate US troops. (Ours would be a trifle miffed in the event of a SCUD up the Ying-Yang courtesy of a Euro Sat, come to think about it!!!) Then the question of operating frequencies for the satellite conflicting with various US satellites arose.

The usual Euromumble rattled on (like Ben Hur, with a cast of thousands, but UNLIKE Ben Hur, not half so entertaining!) Then, in December 2005, surprise and delight all around when Giove-A blasted off from Kazakhstan from the Baikonour Cosmodrome, courtesy of the usual Soyuz rocket. This bird was MADE IN ENGLAND! (Dan Dare eat your heart out!) Especially for lovers of acronyms, Giove stands for Galileo In Orbit Validation Element- A, but hey, you guys knew that! She was a demo bird for trials of the technology built for use aboard Galileo. The makers' were none other than those good ole' boys from Guildford in Surrey, England, (You know guys, that's the place where all those lovely lady soldiers used to train!) namely Surrey Satellite Technology Ltd. (SSTL) One function of this bird was to transmit sat-nav signals the purpose of which was, reportedly, to claim the frequencies it required for sat-nav purposes. (Why don't they just say channel markers, then all us number station dudes would know what they meant!) Time for this bird (Giove-A) from design to launch was according to John Paffen, speaking to "THE REGISTER", three years.

The saga of the lost/found funding you know about for the previous NL. But, in November 2007, UK politicos cast further doubt on this project. "Sleepwalking" was the term used by the Transport Committee of the House of Commons. It expressed concern that Europe, and particularly mentioned the UK, was making an open ended commitment to a project that had not been debated, and the requirement for which was far from clear. A shortfall of £1.7 BILLION was mentioned at this time. To recap, it is doubtful that many people will pay good wonger for something which they can get for here courtesy of Uncle Sam. E2K readers will further recall that the EU wannabe Star Fleet jockeys finally admitted that Galileo DID have a military capability and purpose if so required. (Bit like saying a 12 gauge Greener will only kill you if you want it to!!!) This author particularly likes the quote attributed to Gwyneth Dunwoody, Commons Transport Chairwoman. She is quoted as saying that people here in UK and other European countries" Would prefer better railways and roads not giant signature projects in the sky---" This is a lady who is a well experienced politician and has a great deal of common sense. Her description of the wheeling and dealing to keep this flagging project going as "breaking all the rules for prudent budgetary discipline, is exactly right, if a trifle understated.

As an interesting footnote, as far back as July 2006, a team from Cornell University, USA, belonging to that university's Global Positioning System Laboratory successfully deciphered the PRN codes used by Giove-A. These are Pseudo Random Number codes, and were reportedly being kept secret by the Galileo team. These codes are, reportedly, an integral part of the on board Galileo GPS system. This decryption would enable user having the same decrypt capability as the Cornell team the ability to access the GPS systems of Galileo for the princely sum of ZILCH! (Give or take an antenna, receiver, and the odd hunk of software!) Despite Galileo team efforts to claim breach of copyright, they have, it would seem, as much chance of success there as a one legged duded at a butt kick fest! (Being on the other side of the world must be a real bummer in cases like this!) Just to urinate further on the Galileo *pommes frites*, the Cornel team published their work in June 2006 issue of "GPS WORLD" together with the codes and the methods which the team used to decrypt them. (SOURCE:-The Register July 2006)

Addendum. The price of Galileo had, by this time, according to The Register, risen to £4 BILLION. Puts the author in mind of the quote attributed to our good friend Jacques "I'm A Rocket man" Barrot, speaking about Galileo initially:- It will be as much of a revolution as mobile telephony" Yeah, right! And a damn sight more of a rip off, and even more expensive to Joe Taxpayer! (Author's addition.)

SPECIAL MATTERS:

Operation Jallaa: 4 noted + 2

MESSAGES:

Jallaa Personnel: Excellent work for 2007, thanks.

Thanks D – Xmas ok trust yrs too? Tnks your stuff.

[^] Some German numerals have a radio accent. The numbers in question are:

- $2\,$ ZWEI pronounced by some TXs, as TSWO .
- 5 FUNF some pronounce it as FUNUF.
- 9 NEUN pronounced by some as NEUGEN.

This is totally in keeping with some German armed forces stations and corresponds to our WUN, FOWER, FIFE, NINER

Notes:

Skeds in MCW mode indicated in shaded cell.

V2a skeds are indicated in italic fonts.

M8a skeds are indicated in normal fonts.

The primary or first sked is indicated with (P).

The secondary, second or repeat sked is indicated with (S).

All skeds normally begin on the hour.

Frequencies listed as (), denote primary or secondary sked not determined.

Frequencies listed without (), denotes a possible sked.

SK01 has been heard in lieu of M8a at 0600/0700 and 0700/0800 on Tuesdays.

--Updated October 30, 2007-

Please send any additions, deletions or corrections to: <u>mslaten@prodigy.net</u>

Indicate if it is V2 or M8, time, frequency and callups if possible. Include any other observations or remarks of interest.
